An understanding of acu-points is vital not only for acupuncturists but also for bodyworkers. This user-friendly manual contains current, comprehensive information for both groups, with special emphasis on how shiatsu and tuina

therapists can best utilize “point knowledge” in their practice. Renowned experts Chris Jarmey and Ilaira Bouratinos use succinct text, a well-organized framework, and detailed color anatomical illustrations to clarify the complexities of acu-points. In keeping with normal practice, the authors give the precise anatomical location of a point and illustrate it with a dot, along with alternative locations where relevant. However, the book goes further by delineating the larger area where the point can be activated by pressure, gua sha, and other means. In addition, it explains the optimum physical position for treatment via acupuncture, acupressure, and other strategies, as treatment positions can vary according to the method of point stimulation. The book also documents the distribution of sensation resulting from point stimulation, and differentiates between pressure and needle application where appropriate. A Practical Guide to Acu-Points presents a wealth of carefully researched information equally

valuable for professionals, students, and conscientious practitioners.

Chest Wall Deformities and Corrective Procedures - Shyam Kolvekar 2015-12-11

This book discusses predominantly pectus excavatum and pectus carinatum, its variation and the treatment modalities available, including minimally invasive surgery. This will help to increase awareness of the available treatment options to doctors and healthcare workers but will also help trainee cardiac and thoracic surgeons. It is also an essential reference book for those already practicing. Chest wall deformities are a common occurrence, the commonest being pectus excavatum and pectus carinatum. The treatment for these is provided by very few centers and there is a decline in expertise especially in the UK due to rationing. When patients approach their GP they are

mostly turned away and asked to live with it due to a lack of awareness and treatment modalities. The Editors have extensive experience in this field and will invite authors from other specialties, i.e. chest physicians, cardiologist, pediatric surgeons, anesthesiologists, pain management team, plastic surgeons and prosthetic departments, to contribute their views and solutions to the book.
