Judicial Council of California, Civil Jury Instructions - 2010

States of Injury - Wendy Brown 2020-05-26

Whether in characterizing Catharine MacKinnon's theory of gender as itself pornographic or in identifying liberalism as unable to make good on its promises, Wendy Brown pursues a central question: how does a sense of woundedness become the basis for a sense of identity? Brown argues that efforts to outlaw hate speech and pornography powerfully legitimize the state: such apparently well-intentioned attempts harm victims further by portraying them as so helpless as to be in continuing need of governmental protection. "Whether one is dealing with the state, the Mafia, parents, pimps, police, or husbands," writes Brown, "the heavy price of institutionalized protection is always a measure of dependence and agreement to abide by the protector's rules." True democracy, she insists, requires sharing power, not regulation by it; freedom, not protection. Refusing any facile identification with one political position or another, Brown applies her argument to a panoply of topics, from the basis of litigiousness in political life to the appearance on the academic Left of themes of revenge and a thwarted will to power. These and other provocations in contemporary political thought and political life provide an occasion for rethinking the value of several of the last two centuries' most compelling theoretical critiques of modern political life, including the positions of Nietzsche, Marx, Weber, and Foucault.

Room sizes have been standardised wherever possible. For areas where a standard room size is not appropriate, this document provides a sizing methodology suitable for briefing purposes. Most of the indicative room layouts are informed by one or more ergonomic drawings. In places, the guidance differs from that provided in Approved Document M (2010) and BS 8300:2001 (2009 edition). Food Systems in Africa - Gaëlle Balineau 2021-01-11

Rapid population growth, poorly planned urbanization, and evolving agricultural production and distribution practices are changing foodways in African cities and creating challenges: Africans are increasingly facing hunger, undernutrition, and malnutrition. Yet change also creates new opportunities. The food economy currently is the main source of jobs on the continent, promising more employment in the near future in farming, food processing, and food product distribution. These opportunities are undermined, however, by inefficient links among farmers, intermediaries, and consumers, leading to the loss of one-third of all food produced. This volume is an in-depth analysis of food system shortcomings in three West African cities: Abidjan, Côte d'Ivoire; Rabat, Morocco; and Niamey, Niger. Using the lens of geographical economics and sociology, the authors draw on quantitative and qualitative field surveys and case studies to offer insightful analyses of political institutions. They show the importance of "hard†? physical

infrastructure, such as transport, storage, and wholesale and retail market facilities. They also describe the “soft” infrastructure of institutions that facilitate trade, such as interpersonal trust, market information systems, and business climates. The authors find that the vague mandates and limited capacities of national trade and agriculture ministries, regional and urban authorities, neighborhood councils, and market cooperatives often hamper policy interventions. This volume comes to a simple conclusion: international development policy makers and their financial and technical partners have neglected urban markets for far too long, and now is the time to rethink and reinvest in this complex yet crucial subject.

Hacking Diversity - Christina Dunbar-Hester 2019-12-10

"We regularly read and hear exhortations for women to take up positions in STEM. The call comes from both government and private corporate circles, and it also emanates from enthusiasts for free and open source software (FOSS), i.e. software that anyone is free to use, copy, study, and change in any way. Ironically, rate of participation in FOSS-related work is far lower than in other areas of computing. A 2002 European Union study showed that fewer than 2 percent of software developers in the FOSS world were women. How is it that an intellectual community of activists so open in principle to one and all - a community that prides itself for its enlightened politics and its commitment to social change - should have such a low rate of participation by women? This book is an ethnographic investigation of efforts to improve the diversity in software and hackerspace communities, with particular attention paid to gender diversity advocacy"--

A New York Times Bestseller Winner of the James Beard Award for General Cooking and the IACP Cookbook of the Year Award "The one book you must have, no matter what you're planning to cook or where

The Basque Dialect of Lekeitio - José Ignacio Hualde 1994

This book is a study of the Basque variety spoken in Lekeitio (Vizcaya). As such we have intended to make a direct contribution to Basque dialectology, aiming at setting certain standards for research in this area. In addition, we believe that some of the materials assembled in this work will be of interest to a larger audience beyond Basque specialists. It is for this reason that we decided to write the present book in English. In our opinion, certain linguistic aspects are treated in more detail here than in any previous work on any other Basque variety. A case in point would be accentuation, both at the lexical level and in its relation to the syntactic process of focalization.

Ecological Management of Pine Forests - 2019-01-24

Natural pine forests characterize many landscapes preserved over time, either as a result of a specific forest management practice or a disturbance. In the event of a lack of management over a long period of time, these formations could evolve with increasingly chaotic structures towards other formations. This process can lead to landscape change, the spread of insects and pathogens, and the risk of fires and watercourse obstruction. Pine forest plantations should be considered as transient tree populations, destined to evolve into more complex and stable formations. However, sometimes they should be preserved for their cultural value. Careful management of these forests also takes into account the close relationship between forest and human settlements. As a first step, ecological management assumes the definition of these two macro types. These approaches include the application of integrated methods for determining the reference conditions of the main functional and structural ecosystem components of forests. The reference conditions are the historical (or natural) variability range of ecological structures and processes, reflecting the recent evolution and dynamic interaction of biotic and abiotic conditions and patterns of disturbance. These conditions form the basis for comparison with contemporary ecosystem processes and structures and are a frame of reference for designing ecological restoration treatments and conservation plans. The productive aspects must not be overlooked; rather, they have to be considered, planned, and managed with a perspective of sustainability and ecosystem functionality. This should be considered for a common approach to forest management, for a forest rehabilitation, and for forest restoration activities.

Written by leading scholars in their respective fields, new chapters are offered on matters such as the origin of language, evidence from language for reconstructing human prehistory, invocations of language present in studies of language past, benefits of linguistic fieldwork for historical investigation, ways in which not only biological evolution but also field biology can serve as heuristics for research into the rise and spread of linguistic innovations, and more. Moreover, it offers novel and broadened content complementing the earlier volume so as to provide the fullest available overview of a wholly engrossing field includes 23 all-new contributed chapters, treating some familiar themes from fresh perspectives but mostly covering entirely new topics features expanded discussion of material from language families other than Indo-European provides a multiplicity of views from numerous specialists in linguistic diachrony. *The Handbook of Historical Linguistics, Volume II* is an ideal book for undergraduate and graduate students in linguistics, researchers and professional linguists, as well as all those interested in the history of particular languages and the history of language more generally.
