A Stargazing Program for Beginners - Jamie Carter 2015-11-20

Sets out a simple month-by-month program to reveal all of the night sky's biggest and most beautiful secrets in just one year - and with only a few hours of stargazing each month By investing just an hour a week and \$50 in binoculars, it's possible to learn a few simple techniques and quickly gain a real insight into the night sky's ever-changing patterns - and what they tell us about Earth, the seasons and ourselves. Searching more for a learned appreciation of nature and our exact place within the cosmos than academic scientific knowledge, science and travel writer Jamie Carter takes the reader on a 12 month tour of the night sky's incredible annual rhythms that say so much about Earth. During the journey he learns about the celestial mechanics at work in the skies above that are - to the beginner - almost beyond belief. As well as the vital constellations and clusters, and the weird and wonderful nebulas, he searches out "dark sky destinations" across the globe that help increase knowledge and give a new perspective on familiar night sky sights. On the journey he witnesses a solar eclipse and grapples with star-charts, binoculars, smartphone apps, telescopes, spots satellites and attempts basic astro-photography. By year's end, the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing, what time it is, where all the planets are and even where the

Galactic Center Point is.

Gunpowder Moon - David Pedreira 2018-02-13

An Amazon Best Books of the Year selection BookBub Breakout Debut Novels of Winter 2018 The Verge—18 Science Fiction and Fantasy Books to Read in February Barnes & Noble—One of 25 Sci-Fi/Fantasy Debuts to Watch for in 2018 Nerdmuch—Best New Sci-Fi & Fantasy Books of 2018 Bookish—Winter 2018's Hottest Sci-Fi and Fantasy Books Library Journal: Spring/Summer Best Debut Novels "Interesting quirks and divided loyalties flesh out this first novel in which sf and mystery intersect in a well-crafted plot...Pedreira's science thriller powerfully highlights the human politics and economics from the seemingly desolate expanse of the moon. It will attract readers who enjoyed Andy Weir's lunar crime caper Artemis." -- Library Journal, starred review A realistic and chilling vision of life on the Moon, where dust kills as easily as the vacuum of space...but murder is even quicker—a fast-paced, cinematic science fiction thriller, this debut novel combines the inventiveness of The Martian, the intrigue of The Expanse, and the thrills of Red Rising. The Moon smells like gunpowder. Every lunar walker since Apollo 11 has noticed it: a burnt-metal scent that reminds them of war. Caden Dechert, the chief of the U.S. mining operation on the edge of the Sea of Serenity, thinks the smell is just a trick of the mind—a reminder of his harrowing days as a Marine in the war-torn Middle East back on Earth. It's 2072, and lunar helium-3 mining is powering the fusion reactors that are bringing Earth back from environmental disaster. But competing for the richest prize in the history of the world has destroyed the oldest rule in space: Safety for All. When a bomb kills one of Dechert's diggers on Mare Serenitatis, the haunted veteran goes on the hunt to expose the culprit before more blood is spilled. But as Dechert races to solve the first murder in the history of the Moon, he gets caught in the crosshairs of two global powers spoiling for a fight. Reluctant to be the match that lights this powder-keg, Dechert knows his life and those of his crew are meaningless to the politicians. Even worse, he knows the killer is still out

there, hunting. In his desperate attempts to save his crew and prevent the catastrophe he sees coming, the former Marine uncovers a dangerous conspiracy that, with one spark, can ignite a full lunar war, wipe out his team . . . and perhaps plunge the Earth back into darkness.

Radio Frequency and Microwave Electronics Illustrated - Matthew M. Radmanesh 2001

Foreword by Dr. Asad Madni, C. Eng., Fellow IEEE, Fellow IEE Learn the fundamentals of RF and microwave electronics visually, using many thoroughly tested, practical examples RF and microwave technology are essential throughout industry and to a world of new applications-in wireless communications, in Direct Broadcast TV, in Global Positioning System (GPS), in healthcare, medical and many other sciences. Whether you're seeking to strengthen your skills or enter the field for the first time, Radio Frequency and Microwave Electronics Illustrated is the fastest way to master every key measurement, electronic, and design principle you need to be effective. Dr. Matthew Radmanesh uses easy mathematics and a highly graphical approach with scores of examples to bring about a total comprehension of the subject. Along the way, he clearly introduces everything from wave propagation to impedance matching in transmission line circuits, microwave linear amplifiers to hard-core nonlinear active circuit design in Microwave Integrated Circuits (MICs). Coverage includes: A scientific framework for learning RF and microwaves easily and effectively Fundamental RF and microwave concepts and their applications The characterization of two-port networks at RF and microwaves using S-parameters Use of the Smith Chart to simplify analysis of complex design problems Key design considerations for microwave amplifiers: stability, gain, and noise Workable considerations in the design of practical active circuits: amplifiers, oscillators, frequency converters, control circuits RF and Microwave Integrated Circuits (MICs) Novel use of "live math" in circuit analysis and design Dr. Radmanesh has drawn upon his many years of practical experience in the microwave industry and educational arena to introduce an exceptionally wide range of practical concepts and design methodology and techniques in the most comprehensible fashion.

Applications include small-signal, narrow-band, low noise, broadband and multistage transistor amplifiers; large signal/high power amplifiers; microwave transistor oscillators, negative-resistance circuits, microwave mixers, rectifiers and detectors, switches, phase shifters and attenuators. The book is intended to provide a workable knowledge and intuitive understanding of RF and microwave electronic circuit design. Radio Frequency and Microwave Electronics Illustrated includes a comprehensive glossary, plus appendices covering key symbols, physical constants, mathematical identities/formulas, classical laws of electricity and magnetism, Computer-Aided-Design (CAD) examples and more. About the Web Site The accompanying web site has an "E-Book" containing actual design examples and methodology from the text, in Microsoft Excel environment, where files can easily be manipulated with fresh data for a new design.

Flint in Focus - Annelou L. van Gijn 2010

The biographies of flint objects reveal their various and changing roles in

prehistoric life. Using raw material sourcing, technological analysis, experimental archaeology, microwear and residue studies the author tells the story of flint from the Early Neolithic to its virtual demise in the Late Bronze and Early Iron Age, incorporating data from settlements, burials and hoards from the region of the present-day Netherlands. This richly illustrated book shows the way flint functioned in daily life, how simple domestic tools became ritualized, how flint was used to negotiate change and how the biography of flint objects was related to personhood.

Diary/Landscape - 2015

For more than 35 years, James Welling has explored the material and conceptual possibilities of photography. *Diary/Landscape* - the first mature body of work by this important contemporary artist - set the framework for his subsequent investigations of abstraction and his fascination with nineteenth- and twentieth-century New England. In July 1977, Welling began photographing a two-volume travel diary kept by his great-grandmother Elizabeth C. Dixon, as well as landscapes in southern Connecticut. A beautiful and moving meditation on family, history, memory, and place, the work reintroduced history and private emotion as subjects in high art, while also helping to usher in the centrality of photography and theoretical questions about originality that mark the epochal Pictures Generation.

Ceci N'est Pas Une Hache - Karsten Wentink 2006

As early as the 19th century discoveries of groups of large axes puzzled those confronted with them. The fact that most were found in waterlogged places increased the speculation as to the nature of the deposits. This thesis is concerned with the character and significance of TRB flint axe depositions. The first part is mainly concerned with the question of selective deposition and how it was structured. By means of metrical, spatial and functional analysis, patterns are explored that can shed light on the actions performed by people in the past. The second part deals with the meaning and significance of TRB flint axe depositions. Why did people in the past do the things they did, how were these actions meaningful and important? Using sociological theory and ethnographic evidence an interpretation is presented based on the empirically observed patterns.

Tractor Boys - Christian Caujolle 2013

Youngsters meet up on the village outskirts, racing their tractorcars, a Swedish term for an older car converted for use as an agricultural machine. The smell of rubber, oil and souped-up engines fills the air when the engines speed. The cars form into a circle as the boys take turns in the middle. It is a game - showing their skills - showing off to the girls. Strength is measured and proved - as if in a strange ritual mating dance. Leading Swedish photographer Martin Borgen offers a fascinating insight into a little-known aspect of European youth culture.

Ferrari Fever - Marc Sonnery 2014-01-31

Ferrari Fever is a fascinating and nostalgic look back at the classic car collecting scene in the 60's and 70's, an era when some of the rarest and most interesting Italian automobiles could still be found hidden or languishing in barns, junkyards or by the side of the road...almost lost in time. Paul Schouwenburg's story begins in wartime occupied Amsterdam, a poignant backdrop to the hardships of the years to follow, when the appearance of any exotic Italian thoroughbred was a rare sight indeed. Fuelled by a fascination for all things mechanical, adventures on a Rudge bicycle and early experiences in his parents' succession of Rovers, Paul gains a burning passion for finding, restoring, and ultimately racing Italian cars. But these were not just any Italian cars - from the early 60s onwards, he begins to uncover several rare Alfas, from 1900CSS Zagato to Tipo 33/2, in addition to a host of very special Ferraris, including a 250GTO, 340 America Touring, 250 MM Vignale Berlinetta, 250GT SWB Competition/61 and 275GTB/C/LM, usually by word of mouth or tenuous rumour. Having acquired them, often many different models at a time, he would drive them home across Europe through snow storms, and restore them single-handedly in his spare time, full-time job as a world-leading head and neck cancer surgeon permitting! If that wasn't exciting enough, he would then race them, often winning, before moving on to the next irresistible project. Filled with rich anecdotes and rare insights into the colourful characters of the day, including Jacques Swaters and Rob de la Rive Box, Paul's passion and incredible drive make for exciting reading. Indeed this is a unique

take, a look in the rear view mirror at a bygone era when gems could be found incredibly cheaply and enthusiasts took seat-of-the-pants decisions regarding many aspects of a hobby which was uncharted, innocent and simply not as commercial as today he couldn't even give away his 250 GTO at the time!

Radar Instruction Manual - United States. Maritime Administration
2005

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training

capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardized up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. Robert J. Blackwell Assistant Secretary for Maritime Affairs
