*Exercises and Solutions in Statistical Theory* - Lawrence L. Kupper 2013-06-24

Exercises and Solutions in Statistical Theory helps students and scientists obtain an in-depth understanding of statistical theory by working on and reviewing solutions to interesting and challenging exercises of practical importance. Unlike similar books, this text incorporates many exercises that apply to real-world settings and provides much more thorough solutions. The exercises and selected detailed solutions cover from basic probability theory through to the theory of statistical inference. Many of the

exercises deal with important, real-life scenarios in areas such as medicine, epidemiology, actuarial science, social science, engineering, physics, chemistry, biology, environmental health, and sports. Several exercises illustrate the utility of study design strategies, sampling from finite populations, maximum likelihood, asymptotic theory, latent class analysis, conditional inference, regression analysis, generalized linear models, Bayesian analysis, and other statistical topics. The book also contains references to published books and articles that offer more information about the statistical concepts. Designed as a supplement for advanced undergraduate and graduate courses, this text is a valuable source of classroom examples, homework problems, and examination questions. It is also useful for scientists interested in enhancing or refreshing their theoretical statistical skills. The book improves readers' comprehension of the principles of statistical theory and helps them see how the principles can be used in practice. By mastering the theoretical statistical strategies necessary to solve the exercises, readers will be prepared to successfully study even higher-level statistical theory.

*Enhancing Procurement Practices* - Attila Kovács 2011-06-27

Enhancing Procurement Practices is organised around four main points: -overview and analysis of procurement principles, -practical approach to drafting of solicitation and contract documents, -conduct of procurement procedures, -overview of the e-procurement arena. Although the addressed procurement methods can be used on a wide scale, this book concentrates primarily on such cases when the subject of procurement is complex, or the solicited goods and services are relatively simple but the intended long-term relationship calls for a fairly conscious source selection. Project procurement, the most complicated form of buying civil engineering work, goods, and services, is thoroughly addressed. Beyond the structured overview and comparative analysis of terminology and principles, the book describes such new concepts as single-source preference for

simultaneous procurements, dual-term frame contract for parallel suppliers, and the use of semi-consolidated contract documents. Effective utilisation of theories boils down - among others - to a consistent set of procurement-related terms, proven methodology for drafting comprehensive solicitation documents and contracts, and practical details of communication with offerors.

**Place-Based Spaces for Networked Learning**

- Lucila Carvalho 2016-07-01

With the boundaries of place softened and

extended by digital communications

technologies, learning in a networked society

necessitates new distributions of activity across

time, space, media, and people; and this

development is no longer exclusive to formally

designated spaces such as school classrooms,

lecture halls, or research laboratories. Place-

based Spaces for Networked Learning explores

how qualities of physical places make both

formal and informal education in a networked

society possible. Through a series of

investigations and case studies, it illuminates the

structural composition and functioning of

complex learning environments. This book offers

a wealth of key design elements and attributes

for productive learning that educational

designers can reuse in multiple contexts. The

chapters examine how places are modified,

expanded, or supplemented by networking

technologies and practices in order to create

spaces in which learners can collaboratively

develop new understandings, connections, and

capabilities. Utilizing a range of diverse but

complementary perspectives from anthropology,

archaeology, architecture, geography,

psychology, sociology, and urban studies, Place-

based Spaces for Networked Learning addresses

how material places and digital spaces are understood; how sense can be made of new assemblages and configurations of tasks, tools, and people; how the real-time analysis of new flows of data can inform and entertain users of a space; and how access to the digital realm changes our experiences with both places and other people.
