Nutrition in Epigenetics - Mihai D. Niculescu
2011-06-28

The study of epigenetics, or how heritable changes in gene expression are regulated

without modifying the coding DNA sequence, has become an increasingly important field of study in recent years. Rapid developments in our understanding of the way in which gene function is modulated by the environment has revolutionized the way we think about human development and health. Nutrition in Epigenetics reviews the latest research looking at the interaction between genes and nutrients and the role they play together in maintaining human health. Nutrition in Epigenetics is divided into two primary parts. The first part provides key principles such as epigenetic mechanisms, developmental epigenetics, and the role of epigenetics in disease. The second part looks specifically at the application of epigenetics to the field of human nutrition. Chapters review the role of specific nutrients in modulating epigenetic status and the effect on health and disease. Nutrition in Epigenetics is an indispensable resource for researchers, professionals and advanced students with an

interest in human nutrition, epigenetics, and biomedical research.

Biostatistics - Wayne W. Daniel 2018-11-13

The ability to analyze and interpret enormous amounts of data has become a prerequisite for success in allied healthcare and the health sciences. Now in its 11th edition, *Biostatistics: A Foundation for Analysis in the Health Sciences* continues to offer in-depth guidance toward biostatistical concepts, techniques, and practical applications in the modern healthcare setting. Comprehensive in scope yet detailed in coverage, this text helps students understand—and appropriately use—probability distributions, sampling distributions, estimation, hypothesis testing, variance analysis, regression, correlation analysis, and other statistical tools fundamental to the science and practice of medicine. Clearly-defined pedagogical tools help students stay up-to-date on new material, and an emphasis on statistical software allows faster, more accurate calculation while putting the

focus on the underlying concepts rather than the math. Students develop highly relevant skills in inferential and differential statistical techniques, equipping them with the ability to organize, summarize, and interpret large bodies of data. Suitable for both graduate and advanced undergraduate coursework, this text retains the rigor required for use as a professional reference.

Functional Food Product Development - Jim Smith 2011-03-08

According to an August 2009 report from PricewaterhouseCoopers, the United States market for functional foods in 2007 was US\$ 27 billion. Forecasts of growth range from between 8.5% and 20% per year, or about four times that of the food industry in general. Global demand by 2013 is expected to be about \$100 billion. With this demand for new products comes a demand for product development and supporting literature for that purpose. There is a wealth of research and development in this area and great scope for commercialization, and this book provides a much-needed review of important opportunities for new products, written by authors with in-depth knowledge of as yet unfulfilled health-related needs. This book addresses functional food product development from a number of perspectives: the process

itself; health research that may provide opportunities; idea creation; regulation; and processes and ingredients. It also features case studies that illustrate real product development and commercialization histories. Written for food scientists and technologists, this book presents practical information for use in functional food product development. It is an essential resource for practitioners in functional food companies and food technology centres and is also of interest to researchers and students of food science. Key features: A comprehensive review of the latest opportunities in this commercially important sector of the food industry Includes chapters highlighting functional food opportunities for specific health issues such as obesity, immunity, brain health, heart disease and the development of children. New technologies of relevance to functional foods are also addressed, such as emulsion delivery systems and nanoencapsulation. Includes chapters on product design and the use of

functional ingredients such as antioxidants, probiotics and prebiotics as well as functional ingredients from plant and dairy sources
Specific examples of taking products to market are provided in the form of case studies e.g. microalgae functional ingredients Part of the Functional Food Science and Technology book series (Series Editor: Fereidoon Shahidi)

Evidence and Skills for Normal Labour and Birth - Denis Walsh 2011-11-11

Evidence-based care is a well established principle in contemporary healthcare and a worldwide health care movement. However, despite the emphasis on promoting evidence-based or effective care without the unnecessary use of technologies and drugs, intervention rates in childbirth continue to rise rapidly. This new edition emphasises the importance of translating evidence into skilful practice. It updates the evidence around what works best for normal birth, aspects of which still remain hidden and ignored by some maternity care professionals.

Beginning with the decision about where to have a baby, through all the phases of labour to the immediate post-birth period, it systematically details research and other evidence sources that endorse a low intervention approach. The second edition: has been expanded with new chapters on Preparation for Childbirth and Waterbirth highlights where the evidence is compelling discusses its application where women question its relevance to them and where the practitioner's expertise leads them to challenge it gives background and context before discussing the research to date includes questions for reflection, skills sections and practice recommendations generated from the evidence. Using evidence drawn from a variety of sources, Evidence and Skills for Normal Labour and Birth critiques institutionalised, scientifically managed birth and endorses a more humane midwifery-led model. Packed with up-to-date and relevant information, this text will help all students, practising midwives and

doulas keep abreast of the evidence surrounding normal birth and ensure their practice takes full advantage of it.

Nutritional Genomics - Jim Kaput 2006-04-28

The definitive guide to the basic principles and latest advances in Nutritional Genomics Though still in its infancy, nutritional genomics, or "nutrigenomics," has revealed much about the complex interactions between diet and genes. But it is in its potential application that nutrigenomics promises to revolutionize the ways we manage human health and combat disease in the years ahead. Great progress already has been made in modeling "personalized" nutrition for optimal health and longevity as well as in genotype-based dietary interventions for the prevention, mitigation, or possible cure of a variety of chronic diseases and some types of cancer. Topics covered include: * Nutrients and gene expression * The role of metabolomics in individualized health * Molecular mechanisms of

longevity regulation and caloric restriction * Green tea polyphenols and soy peptides in cancer prevention * Maternal nutrition and fetal gene expression * Genetic susceptibility to heterocyclic amines from cooked foods * Bioinformatics and biocomputation in nutrigenomics * The pursuit of optimal diets Written by an all-star team of experts from around the globe, this volume provides an integrated overview of the cutting-edge field of nutritional genomics. The authors and editors lead an in-depth discussion of the fundamental principles and scientific methodologies that serve as the foundation for nutritional genomics and explore important recent advances in an array of related disciplines. Each self-contained chapter builds upon its predecessor, leading the reader seamlessly from basic principles to more complex scientific findings and experimental designs. Scientific chapters are carefully balanced with those addressing the social, ethical, regulatory, and commercial implications

ofnutrigenomics.

The Nutritional Trace Metals - Conor Reilly
2008-04-15

The Nutritional Trace Metals covers the roles played by trace metals in human metabolism, a relatively neglected area of human metabolism and nutrition. The book focuses its attention on the vital roles played by the relatively small number of trace metal nutrients as components of a wide range of functional proteins. Its structure and content are largely based on the approach adopted by the author, Professor Conor Reilly, during more than 30 years of teaching nutrition to a wide range of undergraduate and postgraduate students. The introductory chapter covers the roles of metals in life processes, the metal content of living systems and metals in food and diets. This is followed by chapters, each dealing with an individual trace metal. Those discussed are iron, zinc, copper, selenium, chromium, manganese, molybdenum, nickel, boron, vanadium, cobalt, silicon and arsenic. In each case attention is

given to the metal's chemistry and metabolic roles, including absorption, transport, losses, status and essentiality, as well as the consequences both of deficiency and excess. The Nutritional Trace Metals is essential reading for nutritionists, dietitians and other health professionals, including physicians, who wish to know more about these vital components of the diet. The book will also be of value to food scientists, especially those involved in food fortification and pharmaceutical product formulation. It will be an invaluable reference volume in libraries of universities and research establishments involved in nutrition teaching and research. Conor Reilly is Emeritus Professor of Public Health at the Queensland University of Technology, Brisbane, Australia, and is also Visiting Professor of Nutrition at Oxford Brookes University, Oxford, U.K.

Encyclopedia of School Health - David C. Wiley 2013-08-23

Children spend more time at school than anywhere else except home; thus, schools can have a major effect on children's health by providing a healthy physical environment, serving meals and snacks built around sound nutritional guidelines, and teaching about health, as well as modeling and promoting healthy behaviors. School health services programs involve not only school nurses and focus not only on nursing practice, standards, and performance issues; they also include services and classes to teach students the information and skills they need to become health-literate, to maintain and improve their health, to prevent disease, and to reduce risky behaviors impacting health. School nurses, teachers, administrators, health coordinators,

guidance counselors and social workers all join with parents in safeguarding and promoting the health and well-being of school-aged children as a basic foundation for academic success. The Encyclopedia of School Health offers quick access to health and wellness information most relevant to children in America's K-12 school setting. You'll find valuable guidance on developmental stages, acute and chronic illnesses, special education, nutrition, crisis response, prevention, and more.

World Report on Ageing and Health - World

Health Organization 2015-10-22

The WHO World report on ageing and health is not for the book shelf it is a living breathing testament to all older people who have fought for their voice to be heard at all levels of government across disciplines and sectors. - Mr Bjarne Hastrup President International Federation on Ageing and CEO DaneAge
This report outlines a framework for action to foster Healthy Ageing built around the new concept of functional ability. This will require a transformation of health systems away from disease based curative models and towards the provision of older-person-centred and integrated care. It will require the development sometimes from nothing of comprehensive systems of long term care. It will require a coordinated response from many other sectors and multiple levels of government. And it will need to draw on better ways of measuring and monitoring the health and functioning of older populations. These actions are likely to be a sound investment in

society's future. A future that gives older people the freedom to live lives that previous generations might never have imagined. The World report on ageing and health responds to these challenges by recommending equally profound changes in the way health policies for ageing populations are formulated and services are provided. As the foundation for its recommendations the report looks at what the latest evidence has to say about the ageing process noting that many common perceptions and assumptions about older people are based on outdated stereotypes. The report's recommendations are anchored in the evidence comprehensive and forward-looking yet eminently practical. Throughout examples of experiences from different countries are used to illustrate how specific problems can be addressed through innovation solutions. Topics explored range from strategies to deliver comprehensive and person-centred services to older populations to policies that enable older

people to live in comfort and safety to ways to correct the problems and injustices inherent in current systems for long-term care.

Parenting Matters - National Academies of Sciences, Engineering, and Medicine 2016-11-21
Decades of research have demonstrated that the parent-child dyad and the environment of the family"which includes all primary caregivers"are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are

created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental

outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Development of the project-level Women's Empowerment in Agriculture Index (pro-WEAI) - Malapit, Hazel J. 2019-01-18

In this paper, the authors describe the adaptation and validation of a project-level WEAI (or pro-WEAI) that agricultural development projects can use to identify key areas of women's (and men's) disempowerment, design appropriate strategies to address identified deficiencies, and monitor project outcomes related to women's empowerment. The 12 pro-WEAI indicators are mapped to three domains: intrinsic agency (power within), instrumental agency (power to), and collective agency (power with). A gender parity index compares the empowerment scores of men and women in the same household. The authors describe the development of pro-WEAI, including: (1) pro-

WEAI's distinctiveness from other versions of the WEAI; (2) the process of piloting pro-WEAI in 13 agricultural development projects during the Gender, Agriculture, and Assets Project, phase 2 (GAAP2); (3) analysis of quantitative data from the GAAP2 projects, including intrahousehold patterns of empowerment; and (4) a summary of the findings from the qualitative work exploring concepts of women's empowerment in the project sites. The paper concludes with a discussion of lessons learned from pro-WEAI and possibilities for further development of empowerment metrics.

Improving early childhood development - World Health Organization 2020-04-03

Enabling young children to achieve their full developmental potential is a human right and an essential requisite for sustainable development.

Given the critical importance of enabling children to make the best start in life, the health sector, among other sectors, has an important role and responsibility to support nurturing care for early childhood development. This guideline provides direction for strengthening policies and programmes to better address early childhood development. It is primarily the family who provides the nurturing care that children need to develop in the earliest years. Many parents and other caregivers need support to put this into practice. Therefore, the guideline contains four recommendations aimed at caregivers, health professionals and other workers who can assist them, as well as policy-makers and other stakeholders. The recommendations relate to i) providing responsive care and activities for early learning during the first 3 years of life; ii) including responsive care and early learning as part of interventions for optimal nutrition of infants and young children; and iii) integrating psychosocial interventions to support maternal

mental health into early childhood health and development services.
