Global Perspectives on Well-Being in Immigrant Families - Radosveta Dimitrova 2013-11-13
Global Perspectives on Well-Being in Immigrant Families addresses how immigrant families and their children cope with the demands of a new

country in relation to psychological well-being, adjustment, and cultural maintenance. The book identifies cultural and contextual factors that contribute to well-being during a family's migratory transition to ensure successful outcomes for children and youth. In addition, the findings presented in this book outline issues for future policy and practice including preventive practices that might allow for

early intervention and increased cultural sensitivity among practitioners, school staff, and researchers.

Advances in Psychological Science: Social, personal, and cultural aspects - John G. Adair 1998

The volumes *Advances in Psychological Science* are the most timely reviews for a person who wants an up-to-date "state-of-the-art" description of selected topics in psychology. These volumes will be useful for the graduate student to get a perspective on the latest developments in psychology today. The chapters are written in a non-technical manner, i.e., not for the specialist, but for the educated psychologist who wishes to see developments across the spectrum of psychology. They may be used for teaching or by experts who wish an overview of recent advances in their science. The chapters uniquely reflect the international or global character of psychology, both in the authors selected to write them, and in their coverage of research from

around the world. Volume 1 contains original contributions to the social, personal, and cultural aspects of the discipline.

When I'm 64 - National Research Council 2006-03-13
By 2030 there will be about 70 million people in the United States who are older than 64. Approximately 26 percent of these will be racial and ethnic minorities. Overall, the older population will be more diverse and better educated than their earlier cohorts. The range of late-life outcomes is very dramatic with old age being a significantly different experience for financially secure and well-educated people than for poor and uneducated people. The early mission of behavioral science research focused on identifying problems of older adults, such as isolation, caregiving, and dementia. Today, the field of gerontology is more interdisciplinary. When I'm 64 examines how individual and social behavior play a role in understanding diverse outcomes in old age. It also

explores the implications of an aging workforce on the economy. The book recommends that the National Institute on Aging focus its research support in social, personality, and life-span psychology in four areas: motivation and behavioral change; socioemotional influences on decision-making; the influence of social engagement on cognition; and the effects of stereotypes on self and others. *When I'm 64* is a useful resource for policymakers, researchers and medical professionals.

change and stability through the lifespan of human development? What role does personal experience, our relationships with others, and historical and sociocultural contexts play in shaping these changes? This is the first book to offer an integrative overview of the range of developmental transitions which occur through the lifespan. Bringing together different theoretical and conceptual perspectives and a broad range of empirical research including quantitative and qualitative approaches, this book encompasses a range of complex transitional forms. Covering topics such as health transitions, transitions in friendships and romantic relationships, career transitions, and societal transitions, this book takes the reader beyond a focus on childhood and adolescence, to look at the whole lifespan. Reflecting a perspective that takes into account a sociocultural past and present, this book seeks to show how transitions can be viewed as both an experience of

uncertainty and possibility. Transitions perform important functions and present psychosocial opportunities. *Developmental Transitions* is essential reading for all undergraduate and graduate students of developmental and cultural psychology and is also a valuable resource for academics and practitioner audiences interested in stability and change as people age.

Information Sources in the Social Sciences - David Fisher

2018-02-19

The aim of each volume of this series Guides to Information Sources is to reduce the time which needs to be spent on patient searching and to recommend the best starting point and sources most likely to yield the desired information.

The criteria for selection provide a way into a subject to those new to the field and assists in identifying major new or possibly unexplored sources to those who already have some acquaintance with it. The series attempts to achieve evaluation through a careful selection of sources and

through the comments provided on those sources.

Selected Topics in Child and Adolescent Mental Health -

Samuel Stones 2020-06-24

This book addresses a variety of critical themes that relate to child and adolescent mental health and working memory. It focuses on various theoretical perspectives as well as highlighting implications for practice. The topics contemplated include social media and mental health, parent-child interaction therapy (PCIT), the role of e-learning in mental health, perinatal depression and working memory, language, and reading and behaviour. In focusing on mental ill-health, this book addresses a global concern. The causes of poor mental health are complex and multi-faceted. In acknowledging this complexity, it must be recognized that there is no single 'magic bullet' that will solve the problem. A multidisciplinary approach is therefore required for approaching the issues, including a variety of

interventions. Finally, the book emphasizes the important contributions that schools, health and social care services and families can provide about addressing the mental health challenges experienced by children and young people.

Developmental Research Methods - Scott A. Miller
2012-09-19

Designed to prepare students to plan, implement, report on, and evaluate research on human development, the Fourth Edition of this classic textbook covers current and emerging issues in the field of developmental psychology research. With a focus on the whole human lifespan, Miller presents an overview of the methods needed to successfully conduct developmental research. Comprehensive in his approach, Miller covers traditional as well as new topics in the field, including cross-cultural research, animal research, autobiographical memory, and peer relations. Indeed, Miller explores every step in the research process, from the initial concept to the

final written result, covering the conceptual aspects of experimental design, as well as the procedural skills necessary to translate design into research. Key Features Up-to-date discussions of relevant and emerging issues and topics in developmental psychology, including infant cognition, attachment, theory of mind, child rearing, applied developmental science, and more Student-friendly design and engaging approach Extended coverage of important, contemporary topics with new chapter boxes, additional tables, figures, and photos New and updated pedagogical tools, including 16 new end-of-chapter exercises, chapter-ending summaries, a glossary, citation of further sources, and relevant websites for numerous topics Expanded coverage of qualitative research and applied research- formerly combined in one chapter, each of these topics now has a dedicated chapter Expanded coverage of adolescence issues Book jacket.

Life-Span Developmental Psychology - Nancy Datan

2013-09-03

Life-Span Developmental Psychology: Dialectical Perspectives on Experimental Research is a compilation of papers that deals with the dialectical perspective focusing on the developmental process of the individual's interaction with the environment. Part 1 discusses the theoretical issues of psychological theorists such as Piaget and Kaplan. The text includes topics such as the dialectics of time and post-Newtonian metatheory for psychologists. One paper discusses the dialectic method and theory in the work of psychology as social proof structures, particularly when systems of action cause conflict with systems of thought. The text analyzes research versus theory through the Wundt-Titchener Laboratory example. Another paper addresses the status of dialectics in developmental psychology using the approach of theoretical orientation versus the scientific method. Part 2

presents research applications covering topics such as the phenomenological and a behavioral approach to remembering, as well as ""remembering"" in empiricism. Another paper addresses the dialectical perspectives of discriminative learning and transfer that includes both theory and research done on discriminative performance. This book will prove valuable for psychologists, behavioral therapists and researchers, and students in behavioral psychology.

Handbook of Demonstrations and Activities in the Teaching of Psychology, Second Edition -

Mark E. Ware 2013-09-05

For those who teach students in psychology, education, and the social sciences, the Handbook of Demonstrations and Activities in the Teaching of Psychology, Second Edition provides practical applications and rich sources of ideas. Revised to include a wealth of new material (56% of the articles are new), these

invaluable reference books contain the collective experience of teachers who have successfully dealt with students' difficulty in mastering important concepts about human behavior. Each volume features a table that lists the articles and identifies the primary and secondary courses in which readers can use each demonstration. Additionally, the subject index facilitates retrieval of articles according to topical headings, and the appendix notes the source as it originally appeared in Teaching of Psychology--especially useful for users needing to cite information. The official journal of the Society for the Teaching of Psychology, Division Two of the American Psychological Association, Teaching of Psychology is a highly respected publication devoted to improving teaching and learning at all educational levels. Volume II consists of 99 articles about teaching physiology, perception, learning, memory, and developmental psychology.

The Fifth Edition of the classic *Developmental Research*

Methods presents an overview of methods to prepare students to carry out, report on, and evaluate research on human development across the lifespan. The book explores

every step in the research process, from the initial concept to the final written product, covering conceptual issues of experimental design, as well as the procedural skills necessary to translate design into research. Incorporating new topics, pedagogy, and references, this edition conveys an appreciation of the issues that must be addressed, the decisions that must be made, and the obstacles that must be overcome at every phase in a research project, capturing both the excitement and the challenge of doing quality research on topics that matter.

The Psychology Major's

Handbook - Tara L. Kuther

2019-02-13

The *Psychology Major's Handbook* offers students a wealth of practical information to succeed throughout their college journey—from choosing a major and learning how to study to writing papers and deciding what to do after graduation. Drawing on over 20 years of experiences, questions, ideas, and enthusiasm from working with

students, best-selling author Tara L. Kuther covers topics relevant to all learners regardless of major, such as developing an active learning style, honing study skills, and becoming more self-aware. The handbook also addresses the specific needs of psychology students with guidance on the process of writing terms papers, how to read articles, and how to write APA-Style empirical reports. Thoroughly revised, the Fifth Edition emphasizes psychological literacy and pays particular attention to the role of technology and social media in students' lives.

Mathematical and Statistics Anxiety: Educational, Social, Developmental and Cognitive Perspectives -

Kinga Morsanyi 2017-01-19

Mathematical anxiety is a feeling of tension, apprehension or fear which arises when a person is faced with mathematical content. The negative consequences of mathematical anxiety are well-documented. Students with high levels of mathematical

anxiety might underperform in important test situations, they tend to hold negative attitudes towards mathematics, and they are likely to opt out of elective mathematics courses, which also affects their career opportunities. Although at the university level many students do not continue to study mathematics, social science students are confronted with the fact that their disciplines involve learning about statistics - another potential source of anxiety for students who are uncomfortable with dealing with numerical content. Research on mathematical anxiety is a truly interdisciplinary field with contributions from educational, developmental, cognitive, social and neuroscience researchers. The current collection of papers demonstrates the diversity of the field, offering both new empirical contributions and reviews of existing studies. The contributors also outline future directions for this line of research.

Conducting Research in Developmental Psychology -

Nancy Jones 2019-11-25
This comprehensive guide offers a rich introduction to research methods, experimental design and data analysis techniques in developmental science, emphasizing the importance of an understanding of this area of psychology for any student or researcher interested in examining development across the lifespan. The expert contributors enhance the reader's knowledge base, understanding of methods, and critical thinking skills in their area of study. They cover development from the prenatal period to adolescence and old age, and explore key topics including the history of developmental research,

ethics, animal models, physiological measures, eye-tracking, and computational and robotics models. They accessibly explore research measures and design in topics including gender identity development, the influence of neighborhoods, mother-infant attachment relationships, peer relationships in childhood, prosocial and moral development patterns, developmental psychopathology and social policy, and the examination of memory across the lifespan. Each chapter ends with a summary of innovations in the field over the last ten years, giving students and interested researchers a thorough overview of the field and an idea of what more is to come. Conducting Research in Developmental Psychology is essential reading for upper-level undergraduate or graduate students seeking to understand a new area of developmental science, developmental psychology, and human development. It will also be of interest to junior

researchers who would like to enhance their knowledge base in a particular area of developmental science, human development, education, biomedical science, or nursing.

**Proceedings of the
Conference on Training
Clinical Child Psychologists**

- June M. Tuma 2013-12-16

This volume is derived from the conference on Training Clinical Child Psychologists held in South Carolina. The goal of the meeting was to identify, examine, and assess the major influences, directions, goals, and actions of consequence to clinical child psychology and to clinical child psychologists.

Proceedings: Conference on Training Clinical Child Psychologists explores issues pertaining to the goal of training competent psychologists to work with children, youths, and families. The objectives of this volume and the conference are: *to stimulate discourse meaningful to clinical child psychologists and to the total psychological community; *to clarify major issues and alternative actions,

and *to formulate and implement feasible proposals for strengthening the professional preparation of clinical child psychologists. Topics included in this volume include: roles and responsibilities of clinical child psychologists and the boundary issues; curriculum issues; models of training; credentialing and licensing; and recommendations, guidelines and conclusions drawn from the conference. Also included are the Guidelines for Training Psychologists to Work with Children Youths, and Families (Appendix E). Contributors include: June M. Tuma, Donald K. Routh, Michael C. **Contemporary Research in
Music Learning Across the**

Lifespan - Jennifer Bugos

2016-08-12

This book examines contemporary issues in music teaching and learning throughout the lifespan, illuminating an emerging nexus of trends shaping modern research in music education. In the past, most music learning opportunities and research were focused upon the pre-adult population. Yet, music education occurs throughout the lifespan, from birth until death, emerging not only through traditional formal ensembles and courses, but increasingly through informal

settings as well. This book challenges previous assumptions in music education and offers theoretical perspectives that can guide contemporary research and practice. Exploring music teaching and learning practices through the lens of human development, sections highlight recent research on topics that shape music learning trajectories. Themes uniting the book include human development, assessment strategies, technological applications, professional practices, and cultural understanding. The volume deconstructs and reformulates performance ensembles to foster mutually rewarding collaborations across miles and generations. It develops new measures and strategies for assessment practices for professionals as well as frameworks for guiding students to employ effective strategies for self-assessment. Supplemental critical thinking questions focus the reader on research applications and provide insight into future

research topics. This volume joining established experts and emerging scholars at the forefront of this multifaceted frontier is essential reading for educators, researchers, and scholars, who will make the promises of the 21st century a reality in music education. It will be of interest to a range of fields including music therapy, lifelong learning, adult learning, human development, community music, psychology of music, and research design. **Guide to Programs** - National Science Foundation (U.S.) 1994

The Developmental Psychologists - Matthew R.

Merrens 1996

The Developmental Psychologists: Research Adventures Across the Lifespan follows upon the success of **The Undaunted Psychologist: Adventures in Research and The Social Psychologists: Research Adventures**. In **The Developmental Psychologists**, as in the previous books, the authors give the reader an "insiders" view on the process of how psychological research takes place. **The Developmental Psychologists** is a dynamic collection of personal adventures that will help bring to life and enrich the material presented in a typical human development course. Contributors have provided lively accounts covering a broad range of topics that closely parallel texts in developmental psychology. As students read about the experiences of each contributor, they will begin to see how these researchers encountered significant ant issues and developed research strategies to study them. The contributors show the

interactions between one's personal life and career and how the two are often woven together in an interesting and successful manner. The contributors tell how they encountered research issues that were especially interesting, unique, and/or problematic, and that demanded some form of resolution or understanding. In the process they provide an insider's view of developmental research by stressing critical thinking and problem solving aspects of research, as well as the personal and situational factors that influence decisions making

Life-span Developmental

Psychology - E. Mark Cummings 2014-01-02

Although there has been a significant increase in studies of stress and coping processes in recent years, researchers have often approached these topics from rather narrow and constrained perspectives. Furthermore, little communication has occurred across disciplines and research directions, resulting in the emergence of several relatively isolated literatures. An outgrowth of the Eleventh Biennial West Virginia University Conference on Life-Span Development, this volume emphasizes two major themes: the importance of taking a life-span approach to the study of stress and coping, and the development of new and more complete conceptual models of stress and coping processes. The first to approach these subjects from a life-span perspective, this book includes papers by distinguished researchers from each of the major periods of the life-span, and brings together the cognitive and socioemotional

traditions in the study of dealing with pressures. The editors hope that this facilitation of communication among researchers with diverse views will help create a broadening and integration of perspectives.

Life-span Human Development - Carol K. Sigelman 1995

organized development texts. By combining the best of the topical and chronological approaches, the authors are able to present life-span development as a motion picture rather than as a series of individual snapshots, thus preserving the integrity of the life-span development concept. Although in the Second Edition the basic perspective remains unchanged, the authors have sharpened the focus on themes such as the importance of the fit between person and environment, and added emphasis on cultural and subcultural diversity in development. Because of the complexity of many of the issues in human development, Sigelman and Shaffer have aimed for a book that is highly readable and yet scholarly. Through careful organization, real life examples, a clear and straightforward writing style, apt use of concrete examples and analogies, and a focus on the relevance of materials to students lives, the authors have made even the most complex topics accessible to their

readers.
