Sport Coaching Research and Practice - Julian North 2017-07-14

Research shapes our understanding of practice in powerful and important ways, in sports coaching as in any other discipline. This innovative study explores the philosophical foundations of sport coaching research, examining the often implicit links between research process and practice, descriptions and prescriptions. Arguing that the assumptions of traditional single-disciplinary accounts, such as those based in psychology or sociology, risk over-simplifying our understanding of coaching, this book presents an alternative framework for sports coaching research based on critical realism. The result is an embedded, relational and emergent conception of coaching practice that opens new ways of thinking about coaching knowledge. Drawing on new empirical case study research, it demonstrates vividly how a critical realist-informed approach can provide a more realistic and accountable knowledge to coaching stakeholders. This knowledge promises to have important implications for coaching, and coach education and development practices. Sport Coaching Research and Practice: Ontology, Interdisciplinarity and Critical Realism is fascinating reading for any student or researcher working in sports coaching, sport pedagogy, physical education, the philosophy or sociology of sport, or research methodology in sport and exercise.

Elements of hydrodynamic propulsion - J.A. Sparenberg 2012-12-06

This is a treatment of a number of aspects of the theory of hydrodynamic propulsion. It has been written with in mind technical propulsion systems generally based on lift producing profiles. We assume the fluid, which is admitted in conventional hydrodynamics, to be incompressible. Further we assume the occurring Reynolds numbers to be sufficiently high such that the inertia forces dominate by far the viscous forces, therefore we take the fluid to be inviscid. Of course it must be realized that viscosity plays an important part in a number of phenomena displayed in real flows, such as flow separation at the nose of a profile and the entrainment of fluid by a ship's hull. Another approximation which will be used in general is that the problems are linearized. In other words it is assumed that the induced disturbance velocities are sufficiently small, such that their squares can be neglected with respect to these velocities themselves. Hence it is necessary to evaluate the domain of validity of the results with respect to these two a priori assumptions. Anyhow it seems advisable to have first a good understanding of the linearized non-viscous theory before embarking on complicated theories which describe more or less realistic situations. For elaborations of the theory to realistic situations we will refer to current literature. In low Reynolds number flow, singular external forces and moments are very useful.

**Knowledge, Policy and Practice in Teacher Education** - Maria Teresa Tatto 2019-02-21

Knowledge, Policy and Practice in Teacher Education reviews the evolution of education policy on initial teacher education as an indicator of the knowledge that is considered important for nation building. It also looks at research on approaches and structures to initial teacher learning as an indication of the intellectual and moral direction to which schooling must aspire. Contributors look at these dynamics across a range of societies including Australia, the Czech Republic, England, Finland, Hong Kong, Israel, Italy, Japan, South Korea, Mexico, Russia, and the USA. Using a review of the literature approach within a comparative framework, the book seeks to answer the following questions for each country: What has been the evolution of different approaches to learning to teach in each setting, and what factors have influenced change over the years? What are the underlying theories that characterize past and current thinking about the knowledge, skills and dispositions needed by teachers and what evidence is used to support these theories? What does a review on the state of the knowledge about teacher education over the past 30 years reveal about the evolution of the research and knowledge traditions that have supported current and past innovations in teacher education? Maria Teresa Tatto and Ian Menter explore international variability in different conceptions of knowledge in the context of learning to teach and explore the way in which national and international influences interact in the developing trajectories of teacher education policy and practice, considering what knowledge is considered important for teachers to have.

**Nursing Theory, Postmodernism, Post-structuralism, and Foucault** - Olga Petrovskaya 2022-09-30

Nursing Theory, Postmodernism, Post-structuralism and Foucault critiques mainstream American nursing theory and its use of post-structural theory, comparing and contrasting how postmodern and post-structural ideas have been used fruitfully in nursing research and theorizing elsewhere. In the late 1980s, references to post-structuralism and Michel Foucault started to appear in nursing journals. Since then, hundreds of nursing publications have cited postmodernism and key post-structural ideas such as power/knowledge, discourse, and de-centering the human subject. In Nursing Theory, Postmodernism, Post-structuralism and Foucault Olga Petrovskaya argues that the application of these ideas is markedly different in American nursing theory scholarship compared to nursing theoretical scholarship generated outside the canon of "unique" nursing theory. Analyzing relevant literature from the late 1980s through 2010s, she demonstrates this difference, arguing that American nursing theory calcified into a matrix of dogmas built on logical positivism, wary of "borrowed" theory, and loyal to a "unique nursing science." Post-structural ideas that fit the matrix such as criticism of medicine are sanctioned, whereas ideas skeptical of humanistic agendas including those that challenge American nursing theory are rendered meaningless. In contrast, other nurse scholars, from Britain, Australia, Canada, and what the author calls the American enclave group, engaged with postmodern and post-structural perspectives to enrich their research and invite readers to rethink nursing practice. The book showcases examples of their intelligent, creative theorizing. Arguing that American nursing theory enervated nursing theorizing, Petrovskaya calls for opening this matrix to theoretical and methodological creativity, less rigid categories of scholarship, and healthy self-examination. Making the case that post-structural ideas are vital for nurses' ability to critically reflect on their discipline and profession, this is a necessary read for all those interested in nursing theory, philosophy and praxis.

**The SAGE Handbook of Qualitative Business and Management Research Methods** - Catherine Cassell 2017-12-14

The SAGE Handbook of Qualitative Business and Management Research Methods provides a state-of-the-art overview of qualitative research methods in the business and management field. The Handbook celebrates the diversity of the field by drawing from a wide range of traditions and by bringing together a number of leading international researchers engaged in studying a variety of topics through multiple

qualitative methods. The chapters address the philosophical underpinnings of particular approaches to research, contemporary illustrations, references, and practical guidelines for their use. The two volumes therefore provide a useful resource for Ph.D. students and early career researchers interested in developing and expanding their knowledge and practice of qualitative research. In covering established and emerging methods, it also provides an invaluable source of information for faculty teaching qualitative research methods. The contents of the Handbook are arranged into two volumes covering seven key themes: Volume One: History and Tradition Part One: Influential Traditions: underpinning qualitative research: positivism, interpretivism, pragmatism, constructionism, critical, poststructuralism, hermeneutics, postcolonialism, critical realism, mixed methods, grounded theory, feminist and indigenous approaches. Part Two: Research Designs: ethnography, field research, action research, case studies, process and practice methodologies. Part Three: The Researcher: positionality, reflexivity, ethics, gender and intersectionality, writing from the body, and achieving critical distance. Part Four: Challenges: research design, access and departure, choosing participants, research across boundaries, writing for different audiences, ethics in international research, digital ethics, and publishing qualitative research. Volume Two: Methods and Challenges Part One: Contemporary methods: interviews, archival analysis, autoethnography, rhetoric, historical, stories and narratives, discourse analysis, group methods, sociomateriality, fiction, metaphors, dramaturgy, diary, shadowing and thematic analysis. #### **Theoretical Nursing** - Afaf Ibrahim Meleis 2011

"An additional assumption was that the processes for theory development were new to nursing and hence, nurses in graduate programs learned strategies for advancing knowledge from other disciplines. This assumption was debunked with the knowledge that nurses were always engaged in knowledge development, driven by their experiences in clinical practice. Because of these assumptions, most of the early writing about theory development was about outlining strategies that should be used, rather than strategies that have already been used in the discipline to develop theories. Theorists themselves did not uncover or adequately discuss ways by which they developed their theories, therefore the tendency was to describe processes that were based on theories developed in other disciplines, mainly the physical and social sciences. And an implicit assumption was made that there should be a single strategy for theory development, some claiming to begin the process from practice, and others believing it should be driven by research"-- Provided by publisher.
