What Kind of Architect Are You - Udo Greinacher 2021-01-15

Architecture is commonplace. We inhabit it and use it; it is constantly present; it serves as foreground and background and usually has a story to tell. But apart from its most illustrious makers, we know almost nothing about the people who conceived it: the architects. What Kind of Architect Are You? offers a glimpse into a vast array of professional possibilities and points out meaningful alternatives to the prevailing myth of the "starchitect." It provides those in search of an architect with insights into how we work and helps them to formulate expectations. It challenges practitioners to think introspectively and examine how they fit into the architectural spectrum. And finally, the collection documents the cross-section of cultural and architectural practice across America.

Human Dimension and Interior Space - Julius Panero 2014-01-21

The study of human body measurements on a comparative basis is known as anthropometrics. Its applicability to the design process is seen in the physical fit, or interface, between the human body and the various components of interior space. *Human Dimension and Interior Space* is the first major anthropometrically based reference book of design standards for use by all those involved with the physical planning and detailing of interiors, including interior designers, architects, furniture designers, builders, industrial designers, and students of design. The use of anthropometric data, although no substitute for good design or sound professional judgment should be viewed as one of the many tools required in the design process. This comprehensive overview of anthropometrics consists of three parts. The first part deals with the theory and application of anthropometrics and includes a special section dealing with physically disabled and elderly people. It provides the designer with the fundamentals of anthropometrics and a basic understanding of how interior design standards are established. The second part contains easy-to-read, illustrated anthropometric tables, which provide the most current data available on human body size, organized by age and percentile groupings. Also included is data relative to the range of joint motion and body sizes of children. The third part contains hundreds of dimensioned drawings, illustrating in plan and section the proper anthropometrically based relationship between user and space. The types of spaces range from residential and commercial to recreational and institutional, and all dimensions include metric conversions. In the Epilogue, the authors challenge the interior design profession, the building industry, and the furniture manufacturer to seriously explore the problem of adjustability in design. They expose the fallacy of designing to accommodate the so-called average man, who, in fact, does not exist. Using government data, including studies prepared by Dr. Howard Stoudt, Dr. Albert Damon, and Dr. Ross McFarland, formerly of the Harvard School of Public Health, and Jean Roberts of the U.S. Public Health Service, Panero and Zelnik have devised a system of interior design reference standards, easily understood through a series of charts and situation drawings. With *Human Dimension and Interior*

Space, these standards are now accessible to all designers of interior environments.

Buildings across Time: An Introduction to World Architecture - Lawrence Wodehouse 2012-12-28

Buildings Across Time offers a survey of world architecture both for students taking introductory courses and for the general reader simply interested in buildings. Drawing - Francis D. K. Ching 1989-09-15

"Drawing relies on a clear vision. It also requires thought which, in, turn, builds understanding. Drawing cannot be detached from seeing and thinking about the fundamental nature of the subject matter being represented. The knowledge and understanding gained through drawing from life directly enhances our ability to draw from the imagination. Just as thought can be put into words, ideas can be made visible in a drawing to promote visual thinking and further stimulate the imagination. Once what is seen or imagined is made visible in a drawing, the image takes on a life of its own and communicates graphically. However eloquently or crudely, all drawings, speak to the eye." From the Preface . Francis D.K. Ching
