Etymological Dictionary of Proto-Celtic - Ranko Matasović 2009

This is the first etymological dictionary of Proto-Celtic to be published after a hundred years, synthesizing the work of several generations of Celtic scholars. It contains a reconstructed lexicon of Proto-Celtic with ca. 1500 entries. The principal lemmata are alphabetically arranged words reconstructed for Proto-Celtic. Each lemma contains the reflexes of the Proto-Celtic words in the individual Celtic languages, the Proto-Indo-European (PIE) roots from which they developed, as well as the cognate forms from

other Indo-European languages. The focus is on the development of forms from PIE to Proto-Celtic, but histories of individual words are explained in detail, and each lemma is accompanied by an extensive bibliography. The introduction contains an overview of the phonological developments from PIE to Proto-Celtic, and the volume includes an appendix treating the probable loanwords from unknown non-IE substrates in Proto-Celtic.

Harmful Algal Blooms (HABs) and Public Health: Progress and Current Challenges - 2016

Annotation Over the past decade, coastal and freshwater systems in the U.S. and worldwide have experienced an apparent increase in the frequency and geographic distribution of harmful algal blooms (HABs). These blooms can adversely affect both public health and ecosystem health. Toxin-producing HABs can accumulate in drinking and recreational waters and in foods of aquatic origin such as fish and seafood. Human and animal health risks include exposure to the toxins through eating contaminated food or drinking or swimming in contaminated water. Because of these potential public health risks, several countries and U.S. states have developed monitoring programs and guidelines for drinking and recreational water quality to protect public health. This special issue will present research papers and reviews on various aspects of public health and environmental responses to harmful algal blooms. The subthemes considered include: - HAB monitoring for public health protection and response - Public health surveillance for HAB-related exposures and illnesses - Health risks from exposure to contaminated fish and shellfish, drinking and recreational water - Remediation and treatment technologies - Challenges and successes of HAB-related public health education campaigns and programs - HAB risk management.

Tuberculosis - Wellman Ribón 2015-07-08

Progress obtained by mycobacteriology in recent years is undeniable with regards to preventing, detecting, and treating cases of tuberculosis, millennial disease that is still present as public health issue worldwide. We present here high-impact research and interest topics related to the application of new methodologies, especially molecular methods for rapid diagnostic such as rapid DST, application of high performance liquid chromatography, molecular epidemiology and molecular diagnostic testing on post mortem. Currently, the constant search for vaccines that prevent the disease is promising through research of the immune response generated by the host towards the bacterium,

and the effectiveness that may be achieved from developed vaccines. Another high-impact factor is the one generated by considering tuberculosis as a social disease with an infectious component reflected in research about tuberculosis and human rights. Finally, we present important issues of the pathogen interaction with different hosts. The constant knowledge generation that expands the frontiers of understanding is a key factor for finding solutions and successful activities for public health.

Avoiding the Middle-Income Trap in Asia - Naoyuki Yoshino 2017-12-26

Since many policymakers aspire to pull their countries out of the middle-income trap and into the ranks of high-income countries, they must understand the factors that hinder or support the transition. This book defines the middle-income trap and examines the roles of manufacturing, finance, and trade openness in achieving sustainable development. The book also explores the role of government policy in fostering growth in the People's Republic of China. A common theme is that such policies may have unforeseen side effects that undermine their effectiveness, including how the hukou registration system and land-use policy control the pace of urbanization.

Ikhana - National Aeronautics Administration 2013-11

In 2006, NASA Dryden Flight Research Center, Edwards, Calif., obtained a civil version of the General Atomics MQ-9 unmanned aircraft system and modified it for research purposes. Proposed missions included support of Earth science research, development of advanced aeronautical technology, and improving the utility of unmanned aerial systems in general.

The project team named the aircraft Ikhana - a Native American Choctaw word meaning intelligent, conscious, or aware - in order to best represent NASA research goals. Researchers at Dryden have a long history of using remotely piloted research vehicles to expand the frontiers of knowledge. Among the first was the Hyper III, a Langley-designed lifting body. In 1975 a series of stall and spin tests was begun at the center with a group of 3/8-scale F-15 RPRVs. Flights of another aircraft, dubbed the "Mini-Sniffer," took place between 1975 and 1979, testing the concepts of an RPRV operating in the Martian atmosphere or conducting high-altitude atmospheric research around the globe. The DAST - Drones For Aerodynamic and Structural Testing - program, a high-risk flight experiment using a ground-controlled, pilotless aircraft, was undertaken at Dryden from 1977 to 1983. Described by NASA engineers as a "wind tunnel in the sky," the DAST vehicle was a specially modified Teledyne-Ryan BQM-34E/F Firebee II supersonic target drone. From 1979 to 1983 the HiMAT (Highly Maneuverable Aircraft Technology) aircraft was flown, one of two subscale research vehicles meant to demonstrate advanced fighter technologies that have since been used in development of many modern high-performance military aircraft. In 1984 Dryden moved from small-scale vehicles to full-size aircraft when a pilot intentionally crashed a retired Boeing jetliner onto Rogers Dry Lake to test a compound meant to reduce post-crash fires on airliners. And Dryden was the center for operations of a family of solar-powered aircraft designed to explore the potential for such aircraft to monitor Earth's atmosphere as well as such other factors as moisture content in soil. Beginning in the 1990s, Pathfinder, Pathfinder-Plus, and Helios were all part of the Environmental Research Aircraft and Technology, or ERAST, program through which researchers hoped to mature RPRV and unmanned aerial system technologies. Building on experience with these and other unmanned aircraft, NASA scientists developed plans to use the Ikhana for a series of missions to map wildfires in the western United States and supply the resulting data to firefighters in near-real time. A team at NASA Ames Research Center, Mountain View, Calif., developed a

multispectral scanner that was key to the success of what became known as the Western States Fire Missions. Carried out by team members from NASA, the U.S. Department of Agriculture Forest Service, National Interagency Fire Center, National Oceanic and Atmospheric Administration, Federal Aviation Administration, and General Atomics Aeronautical Systems Inc., these flights represented an historic achievement in the field of unmanned aircraft technology.

Public Health Ethics: Cases Spanning the Globe - Drue H. Barrett 2018-04-22

This Open Access book highlights the ethical issues and dilemmas that arise in the practice of public health. It is also a tool to support instruction, debate, and dialogue regarding public health ethics. Although the practice of public health has always included consideration of ethical issues, the field of public health ethics as a discipline is a relatively new and emerging area. There are few practical training resources for public health practitioners, especially resources which include discussion of realistic cases which are likely to arise in the practice of public health. This work discusses these issues on a case to case basis and helps create awareness and understanding of the ethics of public health care. The main audience for the casebook is public health practitioners, including front-line workers, field epidemiology trainers and trainees, managers, planners, and decision makers who have an interest in learning about how to integrate ethical analysis into their day to day public health practice. The casebook is also useful to schools of public health and public health students as well as to academic ethicists who can use the book to teach public health ethics and distinguish it from clinical and research ethics.

The Government of No One - Ruth Kinna 2019-08-01

A magisterial study of the history and theory of one of the most controversial political movements Anarchism routinely gets a bad press. It's usually seen as meaning chaos and disorder -- or even nothing at all. And yet, from Occupy Wall Street to Pussy Riot, Noam Chomsky to David Graeber, this philosophical and political movement is as relevant as ever. Contrary to popular perception, different strands of anarchism -- from individualism to collectivism -- do follow certain structures and a shared sense of purpose: a belief in freedom and working towards collective good without the interference of the state. In this masterful, sympathetic account, political theorist Ruth Kinna traces the tumultuous history of anarchism, starting with thinkers and activists such as Peter Kropotkin and Emma Goldman and through key events like the Paris Commune and the Haymarket affair. Skilfully introducing us to the nuanced theories of anarchist groups from Russia to Japan to the United States, *The Government of No One* reveals what makes a supposedly chaotic movement particularly adaptable and effective over centuries -- and what we can learn from it.
