Building Innovation - Neil Briem Gislason 2011-01-01
In Building Innovation, Neil Gislason explores how school buildings inform teaching and learning. He also examines how non-architectural factors, like school organization, interact with physical design to shape the learning environment. Drawing on case study and historical research, the author lays a foundation for school planning and design that will be of use to educators and architects alike. Readers interested in non-traditional school design, teaching

methods, and curriculum will appreciate Gislason's focus on school architecture as a vehicle for progressive education.

La Niña and Its Impacts - Michael H. Glantz 2002

The overriding purpose of the Summit was to draw attention to the importance of improving our understanding of the La Nina phenomenon, identifying what is known, what is not yet known, and what societies need to know in order to prepare for La Nina's impacts. This volume provides the current state of the science of forecasting La Nina as well as

case studies of La Nina impacts around the world and in different economic sectors.

COVID-19: Channels of

transmission to food and agriculture - Food and

Agriculture Organization of the United Nations 2020-04-01

FAO is analysing and providing updates on the emerging COVID-19 pandemic's effects on agricultural

markets—effects that are still largely unknown. Most current assessments generally foresee a contraction in both supply of and demand for agricultural products, and point to possible disruptions in trade and logistics. On the supply side, widely different views remain on the duration of the shocks, the price dynamics, differential impacts between domestic and international markets, differences across countries and commodities, the likely paths of recovery, and the policy actions to remedy the various shock waves. On the demand side, there is near ubiquitous agreement that agricultural demand and trade would slow-down, with contractions stemming from a deceleration in overall economic activity (GDP growth) and rising rates of

unemployment. While food and agricultural systems are exposed to both demand and supply side shocks (symmetric), these shocks are not expected to take place in parallel (asynchronous) since, inter alia, consumers can draw on savings, food stocks and safety nets.

Composite Reinforcements for Optimum Performance - Philippe Boisse 2020-11-02
Composite Reinforcements for Optimum Performance, Second Edition, has been brought fully up to date with the latest developments in the field. It reviews the materials, properties and modelling techniques used in composite production and highlights their uses in optimizing performance. Part I covers materials for reinforcements in composites, including chapters on fibers, carbon nanotubes and ceramics as reinforcement materials. In Part II, different types of structures for reinforcements are discussed, with chapters covering woven and braided reinforcements, three-dimensional fibre

structures and two methods of modelling the geometry of textile reinforcements: WiseTex and TexGen. Part III focuses on the properties of composite reinforcements, with chapters on topics such as in-plane shear properties, transverse compression, bending and permeability properties. Finally, Part IV covers the characterization and modelling of reinforcements in composites, with chapters focusing on microscopic and mesoscopic approaches, X-ray tomography analysis and modelling reinforcement forming processes. With its distinguished editor and international team of contributors, *Composite Reinforcements for Optimum Performance, Second Edition*, is an essential reference for designers and engineers working in the composite and composite reinforcement manufacturing industry, as well as all those with an academic research interest in the subject. Discusses the characterization and modeling of reinforcements in

composites, focusing on such topics as microscopic and mesoscopic approaches, X-ray tomography analysis, and modeling reinforcement forming processes Provides comprehensive coverage of the types and properties of reinforcement in composites, along with their production and performance optimization Includes sections on NCF (non-crimp fabrics), natural fiber reinforcements, tufting composite reinforcements, sustainability, multiscale modeling, knitted reinforcements, and more

[The Surgeon General's Call to Action to Prevent and Reduce Underage Drinking](#) - U. S. Department of Health and Human Services 2012-07-23

Alcohol is the most widely used substance of abuse among America's youth. A higher percentage of young people between the ages of 12 and 20 use alcohol than use tobacco or illicit drugs. The physical consequences of underage alcohol use range from medical problems to death by alcohol poisoning, and alcohol plays a

significant role in risky sexual behavior, physical and sexual assaults, various types of injuries, and suicide. Underage drinking also creates secondhand effects for others, drinkers and nondrinkers alike, including car crashes from drunk driving, that put every child at risk. Underage alcohol consumption is a major societal problem with enormous health and safety consequences and will demand the Nation's attention and committed efforts to solve. For the most part, parents and other adults underestimate the number of adolescents who use alcohol. They underestimate how early drinking begins, the amount of alcohol adolescents consume, the many risks that alcohol consumption creates for adolescents, and the nature and extent of the consequences to both drinkers and nondrinkers. Too often, parents are inclined to believe, "Not my child." Yet, by age 15, approximately one half of America's boys and girls have had a whole drink of alcohol, not just a few sips, and the

highest prevalence of alcohol dependence in any age group is among people ages 18 to 20. This Surgeon General's Call to Action To Prevent and Reduce Underage Drinking was issued to focus national attention on this enduring problem and on new, disturbing research which indicates that the developing adolescent brain may be particularly susceptible to long term negative consequences from alcohol use. Recent studies show that alcohol consumption has the potential to trigger long term biological changes that may have detrimental effects on the developing adolescent brain, including neurocognitive impairment. Fortunately, the latest research also offers hopeful new possibilities for prevention and intervention by furthering our understanding of underage alcohol use as a developmental phenomenon—as a behavior directly related to maturational processes in adolescence. New research explains why adolescents use alcohol differently from adults, why

they react uniquely to it, and why alcohol can pose such a powerful attraction to adolescents, with unpredictable and potentially devastating outcomes. Emerging research also makes it clear that an adolescent's decision to use alcohol is influenced by multiple factors. These factors include normal maturational changes that all adolescents experience; genetic, psychological, and social factors specific to each adolescent; and the various social and cultural environments that surround adolescents, including their families, schools, and communities. These factors—some of which protect adolescents from alcohol use and some of which put them at risk—change during the course of adolescence. Because environmental factors play such a significant role, responsibility for the prevention and reduction of underage drinking extends beyond the parents of adolescents, their schools, and communities. The process of

solving the public health problem of underage alcohol use begins with an examination of our own attitudes toward underage drinking—and our recognition of the seriousness of its consequences for adolescents, their families, and society as a whole. Adolescent alcohol use is not an acceptable rite of passage but a serious threat to adolescent development and health, as the statistics related to adolescent impairment, injury, and death attest. A significant point of the Call to Action is this: Underage alcohol use is not inevitable, and schools, parents, and other adults are not powerless to stop it. The latest research demonstrates a compelling need to address alcohol use early, continuously, and in the context of human development using a systematic approach that spans childhood through adolescence into adulthood.

Education and Democratic Citizenship in America -

author for it is the most important ingredient for a better and blissful life. The 'Power of Positive Thinking' will help you overcome negative attitudes, such as fear and lack of confidence and replace them with the traits of a positive thinker: optimism, determination, patience and focus. Simple techniques of elevating low moods and energy levels by positive thinking also improve one's overall mental and physical health. This book will show you how you can deal more effectively with tough situations and difficult people and dramatically improve your performance and confidence. You must learn that the easiest way to an easy mind is to create an easy mind. This is done by practice and by the application such as "Believe in yourself and in everything you do", "Build new power and determination", "Improve your personal and professional relationships" and "Be kind to yourself" etc.

Brain Tumors in Children -
Amar Gajjar 2018-09-29

This book is a comprehensive and up-to-date compendium of all aspects of brain tumors in children. After introductory chapters on the epidemiology of brain tumors, the book will provide readers with state-of-the-art chapters on the principals of radiation therapy, neurosurgery and neuroimaging. Subsequent chapters discuss the biology and treatment of specific types of brain tumors. The concluding chapters present critical information relevant to survivorship, neurocognitive and other late effects, and the global challenges to better diagnosis and treatment of brain tumors in children. This book is co-authored by experts in the treatment of pediatric brain tumors. All of the authors are internationally recognized authorities and they offer an evidence-based consensus on the biology and treatment of brain tumors. This handbook has far-reaching applicability to the clinical diagnosis and management of brain tumors in children and will prove valuable to specialists,

Teaching Chemistry - A

Studybook - Ingo Eilks

2013-04-20

This book focuses on developing and updating prospective and practicing chemistry teachers' pedagogical content knowledge. The 11 chapters of the book discuss the most essential theories from general and science education, and in the second part of each of the chapters apply the theory to examples from the chemistry classroom. Key sentences, tasks for self-assessment, and suggestions for further reading are also included. The book is focused on many different issues a teacher of chemistry is concerned with. The chapters provide contemporary discussions of the chemistry curriculum, objectives and assessment, motivation, learning difficulties, linguistic issues, practical work, student active pedagogies, ICT, informal learning, continuous professional development, and teaching chemistry in developing environments. This

book, with contributions from many of the world's top experts in chemistry education, is a major publication offering something that has not previously been available. Within this single volume, chemistry teachers, teacher educators, and prospective teachers will find information and advice relating to key issues in teaching (such as the curriculum, assessment and so forth), but contextualised in terms of the specifics of teaching and learning of chemistry, and drawing upon the extensive research in the field. Moreover, the book is written in a scholarly style with extensive citations to the literature, thus providing an excellent starting point for teachers and research students undertaking scholarly studies in chemistry education; whilst, at the same time, offering insight and practical advice to support the planning of effective chemistry teaching. This book should be considered essential reading for those preparing for chemistry teaching, and will be an

important addition to the libraries of all concerned with chemical education. Dr Keith S. Taber (University of Cambridge; Editor: Chemistry Education Research and Practice) The highly regarded collection of authors in this book fills a critical void by providing an essential resource for teachers of chemistry to enhance pedagogical content knowledge for teaching modern chemistry. Through clever orchestration of examples and theory, and with carefully framed guiding questions, the book equips teachers to act on the relevance of essential chemistry knowledge to navigate such challenges as context, motivation to learn, thinking, activity, language, assessment, and maintaining professional expertise. If you are a secondary or post-secondary teacher of chemistry, this book will quickly become a favorite well-thumbed resource! Professor Hannah Sevian (University of Massachusetts Boston)

Mathematical Problem Posing - Florence Mihaela Singer 2015-06-12

The mathematics education community continues to contribute research-based ideas for developing and improving problem posing as an inquiry-based instructional strategy for enhancing students' learning. A large number of studies have been conducted which have covered many research topics and methodological aspects of teaching and learning mathematics through problem posing. The Authors' groundwork has shown that many of these studies predict positive outcomes from implementing problem posing on: student knowledge, problem solving and posing skills, creativity and disposition toward mathematics. This book examines, in-depth, the contribution of a problem posing approach to teaching mathematics and discusses the impact of adopting this

In which countries does the Holocaust form part of classroom teaching? Are representations of the Holocaust always accurate, balanced and unprejudiced in curricula and textbooks? This study, carried out by UNESCO and the Georg Eckert Institute for International Textbook Research, compares for the first time representations of the Holocaust in school textbooks and national curricula. Drawing on data which includes countries in which there exists no or little information about representations of the Holocaust, the study shows where the Holocaust is established in official guidelines, and contains a close textbook study, focusing on the comprehensiveness and

accuracy of representations and historical narratives. The book highlights evolving practices worldwide and thus provides education stakeholders with comprehensive documentation about current trends in curricula directives and textbook representations of the Holocaust. It further formulates recommendations that will help policy-makers provide the educational means by which pupils may develop Holocaust literacy.

Academia Inc. - Jamie Brownlee

2015-05-01T00:00:00Z

Canadian universities are being slowly but inexorably corporatized. Casualizing academic labour, remaking students into consumers of education, implementing corporate management models and commercializing academic research all point to the ascendance of business interests and values in Canada's higher education system. Academia, Inc. examines the tensions that result from the merging of two

fundamentally incompatible institutions — the university and the corporation. Brownlee argues that moving from liberal education to corporate job training, public service to profit-making and critical research to commercial invention radically undermines the goals of higher education. Investigating the history, causes and impacts of corporatization, this book explores how this transformation has taken shape and its ramifications for both universities and society as a whole. Brownlee suggests several strategies for resisting this process.

Knowing and Learning Mathematics for Teaching -

National Research Council
2001-02-25

There are many questions about the mathematical preparation teachers need. Recent recommendations from a variety of sources state that reforming teacher preparation in postsecondary institutions is central in providing quality mathematics education to all students. The Mathematics Teacher Preparation Content Workshop examined this problem by considering two central questions: What is the mathematical knowledge teachers need to know in order to teach well? How can teachers develop the mathematical knowledge they need to teach well? The Workshop activities focused on using actual acts of teaching such as examining student work, designing tasks, or posing questions, as a medium for teacher learning. The Workshop proceedings, *Knowing and Learning*

Mathematics for Teaching, is a collection of the papers presented, the activities, and plenary sessions that took place.

Pineal Region Tumors -

Tatsuya Kobayashi 2009-01-01

The pineal region is an anatomic location where various intracranial tumors, in particular germ cell tumors and pineal parenchymal tumors, occur. Interestingly, pineal germ cell tumors are detected more frequently in Asian countries, including Japan, while pineal parenchymal tumors are less frequent in Asia than in the United States and Europe. This publication takes advantage of the knowledge and experience of Japanese experts in pineal tumors, with emphasis on epidemiology and pathological diagnosis. A variety of treatment modalities including radiotherapy, radiosurgery, surgical therapy and chemotherapy are also discussed. This valuable book will enhance the knowledge on pineal tumor treatment of not only neurosurgeons and

radiation oncologists but also neurologists, neuro-oncologists, pediatricians and neuropathologists interested in pineal region tumors.

Health and Academic Achievement - Blandina Bernal-Morales 2018-09-19

Emotional, physical and social well-being describe human health from birth. Good health goes hand in hand with the ability to handle stress for the future. However, biological factors such as diet, life experiences such as drug abuse, bullying, burnout and social factors such as family and community support at the school stage tend to mold health problems, affecting academic achievements. This book is a compilation of current scientific information about the challenges that students, families and teachers face regarding health and academic achievements. Contributions also relate to how physical activity, psychosocial support and other interventions can be made to understand resilience and vulnerability to school

desertion. This book will be of interest to readers from broad professional fields, non-specialist readers, and those involved in education policy.

Overcoming Students' Misconceptions in Science -

Mageswary Karpudewan
2017-02-28

This book discusses the importance of identifying and addressing misconceptions for the successful teaching and learning of science across all levels of science education from elementary school to high school. It suggests teaching approaches based on research data to address students' common misconceptions.

Detailed descriptions of how these instructional approaches can be incorporated into teaching and learning science are also included. The science education literature extensively documents the findings of studies about students' misconceptions or alternative conceptions about various science concepts. Furthermore,

some of the studies involve systematic approaches to not only creating but also implementing instructional programs to reduce the incidence of these misconceptions among high school science students. These studies, however, are largely unavailable to classroom practitioners, partly because they are usually found in various science education journals that teachers have no time to refer to or are not readily available to them. In response, this book offers an essential and easily accessible guide.

Bilingualism in Development - Ellen Bialystok 2001-04-16

Bilingualism in Development is an examination of the language and cognitive development of bilingual children focusing primarily on the preschool years. It begins by defining the territory for what is included in bilingualism and how language proficiency can be

conceptualized. Using these constraints, the discussion proceeds to review the research relevant to various aspects of children's development and assesses the role that bilingualism has in each. The areas covered include language acquisition, metalinguistic ability, literacy skill, and problem-solving ability. In each case, the performance of bilingual children is compared to that of similar monolinguals, and differences are interpreted in

terms of a theoretical framework for cognitive development and processing. The studies show that bilingualism significantly accelerates children's ability to selectively attend to relevant information and inhibit attention to misleading information or competing responses. This conclusion is used as the basis for examining a set of related issues regarding the education and social circumstances of bilingual children.
