The Feeling Economy - Roland T. Rust

2021-01-19

As machines are trained to “think,” many tasks that previously required human intelligence are becoming automated through artificial intelligence. However, it is more difficult to automate emotional intelligence, and this is where the human worker’s competitive advantage over machines currently lies. This book explores the impact of AI on everyday life, looking into workers’ adaptation to these changes, the ways in which managers can

change the nature of jobs in light of AI developments, and the potential for humans and AI to continue working together. The book argues that AI is rapidly assuming a larger share of thinking tasks, leaving human intelligence to focus on feeling. The result is the “Feeling Economy,” in which both employees and consumers emphasize feeling to an unprecedented extent, with thinking tasks largely delegated to AI. The book shows both theoretical and empirical evidence that this shift is well underway. Further, it explores the effect of the Feeling Economy on our everyday lives in the areas such as shopping, politics, and education. Specifically, it argues that in this new economy, through empathy and people skills, women may gain an unprecedented degree of power and influence. This book will appeal to readers across disciplines interested in understanding the impact of AI on business and our daily lives. It represents a bold, potentially controversial attempt to gauge the direction in

which society is heading.

Just a Couple of Days - Tony Vigorito

2015-03-17

Winner of the Independent Publisher Book Award for Best Visionary Fiction: "A lyrical, thoughtful, viral meme of a book" (Christopher Moore, author of *Noir*). It all starts when a mischievous artist kicks off a game of graffiti tag by painting the phrase, "Uh-oh" on an overpass. Next, an anonymous interlocutor writes back:

"When?" Then someone slyly answers: "Just a couple of days." But exactly what will happen in just a couple of days? Readers don't have long to wait before Professor Blip Korterly is arrested and his molecular biologist friend Dr. Flake Fountain is drafted into a shadow-government research project to develop the ultimate weapon: a biological agent that will render its targets unable to understand symbols, thus disrupting humanity's ability to communicate. Soon, an accidental outbreak turns into a merry-hearted, babble-inducing apocalypse that will either destroy humankind or take it to the next step in evolution. Praised by Tom Robbins who said it "may be the most unusual, the most original novel I have ever read," Tony Vigorito's debut novel is an underground hit that ponders what might happen at the end of time. "Vigorito's . . . irreverent, whimsical style . . . has attracted a cult following... The final apocalyptic vision is a twist not seen since Kurt Vonnegut's *Cat's Cradle*. Recommended." —Library Journal
