Addressing Identity, Access and Compliance

Requirements using IBM Tivoli Identity and Access Assurance - Axel Buecker

2010-09-23

Today, security is a concern for everyone, from members of the board to the data center. Each day another data breach occurs. These incidents can affect an organization's brand, investment return, and customer base. Time spent managing security incidents and managing risks can take time away from focusing on

strategic business objectives. Organizations need to address security challenges by administering, securing, and monitoring identities, roles, and entitlements with efficient life-cycle management, access controls, and compliance auditing. Those tasks include automated and policy-based user management to effectively manage user accounts and centralized authorization for web and other applications, and also enterprise, web, and federated single sign-on, inside, outside, and between organizations. Increasingly important requirements are the integration with stronger forms of authentication (smart cards, tokens, one-time passwords, and so forth) and centralizing policy-based access control of business-critical applications, files, and operating platforms. This IBM® Redpaper™ publication describes how the IBM Tivoli® Identity and Access Assurance offering can help you address compliance initiatives, operational costs (automating manual administrative tasks that can

reduce help desk cost), operational security posture (administering and enforcing user access to resources), and operational efficiencies (enhancing user productivity).

A Human Rights Framework for Intellectual Property, Innovation and Access to Medicines - Joo-Young Lee
2016-03-09

This book examines the relationship between intellectual property in pharmaceuticals and access to medicines from a human rights perspective, with a view to contributing to the development of a human rights framework that can guide States in enacting and implementing intellectual property law and policy. The study primarily explores whether conflicts between patents and human rights in

the context of access to medicines are inevitable, or whether patents can be made to serve human rights. What could be a normative framework that human rights might provide for patents and innovation? Joo-Young Lee argues that it is necessary to have a deepened understanding of each of the two sets of norms that govern this issue, that is, patent law and international human rights law. The chapters investigate the relevant dimensions of patent law, and analyse particular human rights bearing upon the issue of intellectual property and access to medicines. This study will be of great interest to academic specialists, practitioners or professionals in the fields of human rights, trade, and intellectual property, as well as policy makers, activists, and health professionals across the world working in intellectual property and human rights.
