Information Technology Research, Innovation, and E-Government - National Research Council 2002-06-03
Governments have done much to leverage information technology to deploy e-government services, but much work remains before the vision of e-government can be fully realized. *Information Technology Research, Innovation, and E-government* examines the emerging visions for e-government, the technologies required to implement them, and

approaches that can be taken to accelerate innovation and the transition of innovative information technologies from the laboratory to operational government systems. In many cases, government can follow the private sector in designing and implementing IT-based services. But there are a number of areas where government requirements differ from those in the commercial world, and in these areas government will need to act on its role as a "demand leader." Although researchers and government agencies may appear to be unlikely allies in this endeavor, both groups have a shared interest in innovation and meeting future needs. E-government innovation will require addressing a broad array of issues, including organization and policy as well as engineering practice and technology research and development, and each of these issues is considered in the book.
