Tour Guides at Memorial Sites and Holocaust Museums - Anja Ballis 2022

In this volume, contributors reflect on how to teach and mediate difficult history from the perspectives of guides. Too often, their activities are undervalued and taken for granted. Guides represent an important, often forgotten group of educators. This volume takes a global view on guiding at memorial sites and museums in Europe, North America, and South Africa. The contributors to this volume show from different research traditions that it is worth understanding more about the guides personal interests, their motivations, and their concept of guiding. Authors apply methodologies from the social sciences to describe the guides point of view. Complementing the various approaches in tour guide research, a detailed linguistic analysis sheds light on a survivors testimony echoed in the guides language. The studies gathered in this volume open up an orientation for further approaches to tour guiding based on and centered around "authentic" materials from guides. The Editor Anja Ballis, PhD, professor and chair of German Language Education at the University of Munich. The focus of her research has been on Holocaust education, teaching with digital media, and textbook research. She is also known for her research on interactive 3D testimonies, tour guides at Holocaust museums and memorial sites and as an editor of Holocaust Education Historical Learning Human Rights Education since 2019, Springer Science).

[Vray 5.0 \(NEXT\) User Guide](#) - Serdar Hakan DÜZGÖREN

Universal V-Ray Settings This page provides a tutorial on universal settings for V-Ray that work for most still images. Overview The "universal" settings comprise a set of settings that work very well for still images in many situations and are the default for V-Ray Next. Please note that these settings are not optimal, in the sense that with enough tweaking, you can probably get similar quality with faster render times. The beauty of these settings, though, is that they require almost no tweaking, and you are guaranteed to get a good result in the end. The advantages of these settings are: o very little parameters for controlling render quality vs. speed o works for a very large number of scenes o produces high-quality results With the Progressive Image Sampler, the default Render time (min) is set to 1.0, which might be insufficient for some scenes. You can reset this to 0.0 min and rendering will continue until the Noise threshold is reached. Setting the V-Ray Renderer 1. Set V-Ray as the current rendering engine (with the default V-Ray settings). 2. The default settings are optimized to work universally, so it is recommended to keep them: Progressive image sampler with 100 Max. subdivs and 1 Min. subdivs; GI enabled, using Brute Force as Primary GI engine and Light Cache as Secondary GI engine. 3. You can further refine the noise levels from the Progressive Image sampler rollout by adjusting the Noise Threshold and placing a 0 value for the Render time (min). 4. You can control the amount of AA vs shading samples (for materials/lights/GI) using the Min shading rate parameter in the Image Sampler rollout but the default value is optimised to work well for the majority of scenes.
