## **Professional Nursing Concepts: Competencies for Quality**

**Leadership** - Anita Finkelman 2010-10-22

Professional Nursing Concepts: Competencies for Quality Leadership takes a patient-centered, traditional approach to the topic of nursing education and professional development. This dynamic text engages students in recognizing the critical role that nurses play in healthcare delivery. Divided into four sections, this text has a unique framework and exclusively covers the Institute of Medicine's (IOM) five core competencies on quality and healthcare for all healthcare professionals. The first section introduces students to the history of the nursing profession, and covers such topics as nursing education, regulation, and accreditation. Section two explores the healthcare context in which nursing is practiced including continuum of care, health promotion, disease prevention, and illness, nursing ethics, and the nurse's role in health policy. The third section focuses on each of the five core competencies set forth by the IOM, and the final section focuses on the practice of nursing today and in the future particularly exploring the critical issue of the nursing shortage and the transformation of nursing practice.

**Privacy Concerns Surrounding Personal Information Sharing on Health and Fitness Mobile Apps** - Sen, Devjani 2020-08-07

Health and fitness apps collect various personal information including name, email address, age, height, weight, and in some cases, detailed health information. When using these apps, many users trustfully log everything from diet to sleep patterns. However, by sharing such personal information, end-users may make themselves targets to misuse of this information by unknown third parties, such as insurance companies. Despite the important role of informed consent in the creation of health and fitness applications, the intersection of ethics and information sharing is understudied and is an often-ignored topic during the creation of mobile applications. Privacy Concerns Surrounding Personal Information Sharing on Health and Fitness Mobile Apps is a key reference source that provides research on the dangers of sharing personal information on health and wellness apps, as well as how such information can be used by employers, insurance companies, advertisers, and other third parties. While highlighting topics such as data ethics, privacy management, and information sharing, this publication explores the intersection of ethics and privacy using various quantitative, qualitative, and critical analytic approaches. It is ideally designed for policymakers, software developers, mobile app designers, legal specialists, privacy analysts, data scientists, researchers, academicians, and upper-level students.

**Investing in the Health and Well-Being of Young Adults** - National Research Council 2015-01-27

Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they

need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

Fire Service Ethics - H. Scott Walker 2018-11-14

Fire Service Ethics is the first textbook specifically developed to help fire service personnel deal with ethical dilemmas. Firefighters and fire service leaders will find benefit from this important tool to aid them in dealing with complex issues. No other profession places such discretionary burden on its practitioners as the fire service. The military, law enforcement, the medical profession, and legal profession all provide a robust set of ethical policies and guidelines to their members. Fire Service Ethics provides the foundation for creating ethical boundaries. Fire Service Ethics meets and exceeds the course outcomes and course objectives for the National Fire Academy FESHE Model Curriculum Bachelor's (Non-Core) course called Fire Service Ethics (C0303). It is also well suited for fire officer and administration development programs. Section 1 of the book is entitled Foundations. Its four chapters are intended to provide the reader with the basic understanding of ethics necessary to master the material in the succeeding three sections. Chapter 1 is recommended for all readers, as it addresses the important questions of ethical relevance to the fire service. Chapters 2, 3 & 4 are grounded in academic approaches to ethics and are specifically intended to be used in college courses. The material within the sections encourages critical analysis of ethical systems, and understanding of the basics of human behavior. Section 2 of the book is entitled Ethics on The Line. Its chapters address issues directly related to rank-and-file firefighters, and company officers. The section also deals with diversity; first as an abstract concept, and then as it applies specifically to the fire service. Section 2 is intended to serve dual purposes. First, it is designed to be included in an academic curriculum aimed at future firefighters. Secondly, Section 2 - combined with Section 4 - encompasses the majority of material appropriate for inclusion in fire service training programs. Section 3 of the text is dedicated to Administrative Ethics. The chapters within the section explore ethics issues faced by fire chiefs and senior administrative personnel. Included within the section are chapters on the building and maintenance of an ethical work culture, the ethical responsibilities associated with administration, and finally, ethics laws. Section 3 - combined with Sections 1 and 4 - is especially appropriate for officer development programs and collegiate programs in fire administration. Section 4 of the book is entitled Applied Ethics. The three chapters within the section deal with the application of ethics on the personal and department level. Included within the section are chapters on ethical decision-making, mechanisms by which unethical behavior is engaged, and a review of current ethical issues affecting local fire departments. Section 4 is universal in its application and should be used in all collegiate programs, as well as in firefighter and fire

**Taking Action Against Clinician Burnout** - National Academies of Sciences, Engineering, and Medicine 2020-01-02

Patient-centered, high-quality health care relies on the well-being, health, and safety of health care clinicians. However, alarmingly high rates of clinician burnout in the United States are detrimental to the quality of care being provided, harmful to individuals in the workforce, and costly. It is important to take a systemic approach to address burnout that focuses on the structure, organization, and culture of health care. Taking Action Against Clinician Burnout: A Systems Approach to Professional Well-Being builds upon two groundbreaking reports from the past twenty years, To Err Is Human: Building a Safer Health System and Crossing the Quality Chasm: A New Health System for the 21st Century, which both called attention to the issues around patient safety and quality of care. This report explores the extent, consequences, and contributing factors of clinician burnout and provides a framework for a systems approach to clinician burnout and professional well-being, a research agenda to advance clinician well-being, and recommendations for the field.

**The Learning Healthcare System** - Institute of Medicine 2007-06-01

As our nation enters a new era of medical science that offers the real prospect of personalized health care, we will be confronted by an increasingly complex array of health care options and decisions. The Learning Healthcare System considers how health care is structured to develop and to apply evidence from health profession training and infrastructure development to advances in research methodology, patient engagement, payment schemes, and measurement and highlights opportunities for the creation of a sustainable learning health care system that gets the right care to people when they need it and then captures the results for improvement. This book will be of primary interest to hospital and insurance industry administrators, health care providers, those who train and educate health workers, researchers, and policymakers. The Learning Healthcare System is the first in a series that will focus on issues important to improving the development and application of evidence in health care decision making. The Roundtable on Evidence-Based Medicine serves as a neutral venue for cooperative work among key stakeholders on several dimensions: to help transform the availability and use of the best evidence for the collaborative health care choices of each patient and provider; to drive the process of discovery as a natural outgrowth of patient care; and, ultimately, to ensure innovation, quality, safety, and value in health care.

Health IT as a Tool for Prevention in Public Health Policies - Divya Srinivasan Sridhar 2014-01-14

Health IT as a Tool for Prevention in Public Health Policies examines the current state of Health Information Technology (HIT) in the United States. It investigates the converging problems of chronic disease, societal welfare, childhood obesity, and the lack of healthcare for the economically disadvantaged in the U.S. It considers various providers of care for disadvantaged groups and outlines innovative public policy solutions to a wide range of community problems. The book starts by detailing the major problems the U.S. has faced with its healthcare system. Next, it describes current federal efforts to solve these problems and unveils novel solutions to these challenges. Each chapter examines a different technological solution that the U.S. is currently investing in and allocating time, resources, and energy to. Supplying a basic theoretical foundation on the Patient Protection and Affordable Care Act (PPACA) and the Health Information Technology for Economic and Clinical Health (HITECH) Act, the book discusses the effects of geographic disparities and HIT at the meso, macro, and micro levels of society. It also demonstrates how individuals can use a range of HITs to improve prevention of health concerns, including mobile health apps, video games, self-management technologies, crowdsourcing, and other e-health technologies. The book describes HIEs, RHIOs, and NHIN and explains how they connect to Community Health Centers (CHCs). It also explains how CHCs can use HIT to improve care for the disadvantaged and Medicaid population. It includes a case study of electronic health literacy and cancer patients and another on how equipping private practice physicians with EMRs can help them tackle prevention and improve organizational functioning. The book concludes by providing a comparative perspective between the use of HIT in the U.S. and the United Kingdom and by suggesting the direction that the U.S. should take toward cloud-based solutions to its e-health infrastructure.

**Dying in America** - Institute of Medicine 2015-03-19

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social,

psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

**Registries for Evaluating Patient Outcomes** - Agency for Healthcare Research and Quality/AHRQ 2014-04-01

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to

determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Redefining Health Care - Michael E. Porter 2006

The U.S. health care system is in crisis. At stake are the quality of care for millions of Americans and the financial well-being of individuals and employers squeezed by skyrocketing premiums-not to mention the stability of state and federal government budgets. In Redefining Health Care, internationally renowned strategy expert Michael Porter and innovation expert Elizabeth Teisberg reveal the underlying-and largely overlooked-causes of the problem, and provide a powerful prescription for change. The authors argue that participants in the health care system have competed to shift costs, accumulate bargaining power, and restrict services, rather than create value for patients. This zero-sum competition takes place at the wrong level-among health plans, networks, and hospitals-rather than where it matters most, in the diagnosis, treatment, and prevention of specific health conditions. Redefining Health Care lays out a breakthrough framework for redefining health care competition based on patient value. With specific recommendations for hospitals, doctors, health plans, employers, and policy makers, this book shows how to move to a positive-sum competition that will unleash stunning improvements in quality and efficiency.

Health Professions Education - Institute of Medicine 2003-07-01

The Institute of Medicine study Crossing the Quality Chasm (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.

**Healthcare and Big Data** - Mary F.E. Ebeling 2016-09-27

This highly original book is an ethnographic noir of how Big Data profits from patient private health information. The book follows personal health data as it is collected from inside healthcare and beyond to create patient consumer profiles that are sold to marketers. Primarily told through a first-person noir narrative, Ebeling as a sociologist-hard-boiled-detective, investigates Big Data and the trade in private health information by examining the information networks that patient data traverses. The noir narrative reveals the processes that the data broker industry uses to create data commodities—data phantoms or the marketing profiles of patients that are bought by advertisers to directly market to consumers. Healthcare and Big Data considers the implications these “data phantoms” have for patient privacy as well as

the very real harm that they can cause.
