**A Passion for the Planets** - William Sheehan 2010-07-20

Astronomy is by far the most popular of the physical sciences, enticing enough to become a major cultural preoccupation for many, and for some an enthralling scientific activity which veritably rules their lives. What is the nature of that seemingly unstoppable attraction? In this lively and compelling account, William Sheehan - professional psychiatrist, noted historian of astronomy, and incurable observer - explores the nature of that allure through the story of man's visual exploration of the planets. In this volume, the first of a trilogy, Sheehan starts with observational astronomy's profound and lasting effect on his own life, setting the points of embarkation for the journey to come. He travels across the historical landscape seeking the earliest origins of man's compulsion to observe the planets among the hunter gatherers of the upper palaeolithic, and traces the evolving story from the planetary records of the earliest cities, to Pharonic Egypt through to Hellenistic Greek astronomy culminating in Ptolemy. The necessity to observe played its part in the perceptual changes wrought by the Copernican revolution, as well as the observational advances achieved by such extraordinary characters as Tycho with his sharpest of eyes, and his luxurious practice of total astronomy. The two epochal advances published in 1609, both born through planetary observation, namely Kepler's discovery of the true nature of the orbit of Mars and Harriot and Galileo's observations of the Moon, have a pivotal place in this account. Sheehan weaves a rich tapestry of social and technological settings, patronage and personalities, equipment and skills, cosmologies and goals, motives and compulsions to try to explain why we have observed, and continue to observe, the planets. The compelling text of A Passion for the Planets is enhanced by the specially commissioned planetary artwork of Julian Baum, himself son of a noted planetary observer and historian of planetary observers, and Randall Rosenfeld. A Passion for the Planets will be of interest to all amateur astronomers; active planetary observers; armchair astronomers; those interested in the history of astronomy; the cultural history of science; and astronomical art.

**Motorized Obsessions** - Paul R. Josephson 2007-09-02

2008 Outstanding Academic Title, Choice Magazine From dirt bikes and jet skis to weed wackers and snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

It was also intended to detect and prosecute, where warranted, any other crimes that surfaced during the course of the investigation. The Lost Constellations - John C. Barentine 2015-10-23

Casual stargazers are familiar with many classical figures and asterisms composed of bright stars (e.g., Orion and the Plough), but this book reveals not just the constellations of today but those of yesteryear. The history of the human identification of constellations among the stars is explored through the stories of some influential celestial cartographers whose works determined whether new inventions survived. The history of how the modern set of 88 constellations was defined by the professional astronomy community is recounted, explaining how the constellations described in the book became permanently "extinct." Dr. Barentine addresses why some figures were tried and discarded, and also directs observers to how those figures can still be picked out on a clear night if one knows where to look. These lost constellations are described in great detail using historical references, enabling observers to rediscover them on their own surveys of the sky. Treatment of the obsolete constellations as extant features of the night sky adds a new dimension to stargazing that merges history with the accessibility and immediacy of the night sky.
