The Price Waterhouse Guide to Activity-based Costing for Financial Institutions - Julie Maberley 1996

From banks to brokerage houses, profitability is the watchword for today's financial institutions. The search is unceasing for better ways to achieve it, maintain it, and defend it against competitive pressures. For some time, managers within financial institutions have been aware of a powerful new tool for cost analysis developed in the manufacturing sector: activity-based costing (ABC). A handful of financial services consultants around the world have been helping their financial services clients to migrate ABC from its birthplace in the manufacturing sector to the world of financial services, where it can be immensely effective as a basis for strategic decisions. It was time for a book that clarifies for general executives how ABC works and what contributions it can make to the formation of winning strategies. And it was time for a practical, comprehensive book that initiates management accountants in the financial services sector into this new approach to cost analysis. The

Price Waterhouse Guide to Activity-Based Costing for Financial Institutions is that book. The ABC approach is particularly effective because financial services companies sell services as well as products. Profitability measurement cannot rely on older, more traditional methods of cost accounting, techniques that focus on the costs of raw materials and labor. The Price Waterhouse Guide to Activity-Based Costing for Financial Institutions shows how these firms can use the breakthrough concept of ABC in the same way that other companies manage all activities from the top down, more efficiently. This book explains the methods of this technique, with detailed guidelines that help firms plan for costs before they occur, rather than simply monitoring them.

The Structuring of Organizations - Henry Mintzberg 1979

How do organizations structure themselves? A synthesis of the empirical literature in the field, supported by numerous examples and illustrations, provides images that produce a theory. The author introduces five basic configurations of structure - the simple structure, the machine bureaucracy, the professional bureaucracy, the divisionalized form, and the adhocracy. This book reveals that structure seems to be at the root of many questions about organizations and why they function as they do.

Accounting Thought and Practice Reform - Frank Clarke 2018-10-09

Raymond John Chambers was born just over a century ago on 16 November 1917. It is more than fifty years since his first classic, *Accounting, Evaluation and Economic Behavior*, was published, more than forty since *Securities and Obscurities: Reform of the Law of Company Accounts* (republished in 1980 as *Accounting in Disarray*) and over twenty since the unique *An Accounting Thesaurus: Five Hundred Years of Accounting*. They are drawn upon extensively in this biography of Chambers' intellectual contributions, as are other of his published works. Importantly, we also analyze archival correspondence not previously examined. While Chambers provided several bibliographical summaries of his work, without the benefits of reviewing and

interspersing the text with correspondence materials from the Chambers Archive this study would lack an appreciation of the impact of his early childhood, and nuances related to his practical (including numerous consultancies) and academic experiences. The 'semi-biographical narrative' codifies article and editorial length exercises by the authors drawing on parts of the archive related to theory development, measurement and communication. Other parts are also examined. This allows us to respond to those critics who claim his reforms were naive. They further reveal a man of theory and practice, whose theoretical ideas were solidly grounded on observations from his myriad interests and experiences. Many of his practical experiences have not been examined previously. This approach and the first book-length biography differentiates this work from earlier analyses of Chambers' contribution to the accounting literature. We provide evidence to support the continued push for the reforms he proposed to accepted accounting thought and practice to ensure accounting is the serviceable technology so admired by Pacioli, Da Vinci and many other Renaissance pioneers. It will be of interest to researchers, educators, practitioners and regulators alike.
