Improve your chances of lasting professional success with Secrets of Passing the NEBOSH Exams.

## The Level Mindset - Steve Oakes 2016-02-26

In The A Level Mindset, Steve Oakes and Martin Griffin share the secrets of coaching students to develop the characteristics, habits and mindsets which will help them realise their potential. Those students who make real and sustained progress at A level aren't necessarily the ones with superb GCSEs. Some students leap from average results aged 16 to outstanding results aged 18. Others seem to hit a ceiling. But why? It was in trying to answer this question that the VESPA system emerged. Steve and Martin have

cut through the noise surrounding character development and identified five key characteristics that all students need to be successful: vision, effort, systems, practice and attitude. These characteristics beat cognition hands down. Successful students approach their studies with the right behaviours, skills and attitudes: they understand how to learn and revise effectively, they're determined and organised, they give more discretionary effort and they get top results. Success at A level is a result of character, not intelligence. Much has been written about growth mindsets and character development in recent years, but teachers are still left wondering how to apply these ideas in their contexts: how can these theories help learners in practice? Taking cues from the work of Peter Clough, Carol Dweck and Angela Lee Duckworth, and informed by their collective 30 plus years of teaching and coaching, Steve and Martin have spent years researching how character and behaviours affect

student outcomes in their sixth form. After identifying the core traits that contributed to student success, they developed practical activities to help every student develop the A Level Mindset. Discover 40 concrete, practical and applicable tools and strategies that will supercharge learners' ambition, organisation, productivity, persistence and determination. Suitable for teachers, tutors, heads of sixth form or anyone else who wants to help A level students achieve their potential, The A Level Mindset offers 40 easy-to-use activities to develop students' resilience, commitment, buoyancy, motivation and determination. It could be your key to transforming student outcomes.

### **Engineering Drawing for Manufacture -**

Brian Griffiths 2002-10-01

The processes of manufacture and assembly are based on the communication of engineering information via drawing. These drawings follow rules laid down in national and international standards. The organisation responsible for the international rules is the International Standards Organisation (ISO). There are hundreds of ISO standards on engineering drawing because drawing is very complicated and accurate transfer of information must be guaranteed. The information contained in an engineering drawing is a legal specification, which contractor and sub-contractor agree to in a binding contract. The ISO standards are designed to be independent of any one language and thus much symbology is used to overcome any reliance on any language. Companies can only operate

efficiently if they can guarantee the correct transmission of engineering design information for manufacturing and assembly. This book is a short introduction to the subject of engineering drawing for manufacture. It should be noted that standards are updated on a 5-year rolling programme and therefore students of engineering drawing need to be aware of the latest standards. This book is unique in that it introduces the subject of engineering drawing in the context of standards.
