The Future of Nursing -

Institute of Medicine

2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and

safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates.

Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Walking Well Again - Stuart M. Goldman Dpm 2016-01-13

For millions of Americans living with chronic pain, Walking Well Again is the

pathway to rapid recovery. It provides clear guidance for both patients and clinicians to properly investigate symptoms that may be severe, but are often easy to resolve without medicine, injections, or surgery. The most common symptoms addressed include back pain, knee and hip arthritis, and foot and leg pain. They make it difficult for people to walk well, stand comfortably, sleep comfortably, sit or get up from a seated position without pain, and bend over to pick things up. These symptoms are most often attributed to Arthritis, Spinal Stenosis, Fibromyalgia, Diabetic Neuropathy, Poor Circulation, Painful Swollen Legs, or Restless Leg Syndrome. Even if present for years or decades, symptoms can resolve within 1-2 days of proper treatment. Within the practice of the author, patients with these complaints rapidly improve over 70% of the time. Less frequently, he also sees improvement in neck pain, headaches, balance problems, and depression, as is addressed

within the book. Over 85 stories of individual patients are included in the book, to help the reader best understand the evaluation techniques that identify the hidden causes of pain, along with tools properly manage them. These 85 are among the over 3500 patients that have enjoyed great relief of chronic symptoms under the care of the author, Dr. Stuart Goldman. Video interviews of over 120 patients, many from the stories within the book, are included on the web site WalkingWellAgain.com. Most of the information is presented so that it can be followed by non medical people without difficulty. Several sections are labeled "For the Clinician and the Very Curious," and have information in greater detail than would be needed by individual patients seeking help. Even those sections are written in a layman's language, with explanation of medical vocabulary. The book includes 28 chapters, and is formally divided into 4 sections. The first section provides a path to

understanding symptoms, which are often mistakenly thought to be from common medical diseases or even the normal aging process. The second section focuses on Spinal Stenosis and PseudoStenosis, which are most often the hidden causes of pain. PseudoStenosis is an original classification of the author, who has published many articles related to the subjects of the book. The second section presents the classic understanding and treatment of Spinal Stenosis, Dr. Goldman's original Positional Management approach, and also provides great detail into the importance and management of PseudoStenosis. The third section focuses on common causes and patterns of chronic pain, and facilitates reevaluation of the symptoms and presents paradigms for management, based upon the use of information from Section 2. Conditions specifically addressed include Peripheral Neuropathy, Peripheral Artery Disease (poor circulation),

Painful Swollen Legs, Arthritis including Fibromyalgia (two chapters), Shortness of Breath, Restless Leg Syndrome and night time symptoms, Balance problems, Depression, and the resumption of playing Sports. The fourth section has two chapters. Chapter 27 includes 40 stories that either provide new specific insights or reinforce essential concepts through the power of the tale. Chapter 28 provides an overview with direction for larger scale research, and the potential benefits of such research. Finally, there are two appendixes, and an index. In addition to many articles published in Podiatry, Diabetes, and Family Practice journals between 1997 and 2013, Dr. Goldman has also lectured at many Podiatry state and national scientific meetings. He is eager to share the information with both patients and clinicians, and is therefore pleased to present this book with a one month money back guarantee. *Effective Documentation for Physical Therapy Professionals*

First Steps in Outpatient CDI -

First Steps in Outpatient CDI: Tips and Tools for Building a Program Anny P. Yuen, RHIA, CCS, CCDS, CDIP Page Knauss, BSN, RN, LNC, ACM, CPC, CDEO Find best practices and helpful advice for getting started in outpatient CDI with First Steps in Outpatient CDI: Tips and Tools for Building a Program. This first-of-its-kind book provides an overview of what outpatient CDI entails, covers industry guidance and standards for outpatient

documentation, reviews the duties of outpatient CDI specialists, and examines how to obtain backing from leadership. Accurate documentation is important not just for code assignment, but also for a variety of quality and reimbursement concerns. In the past decade, outpatient visits increased by 44% while hospital visits decreased by nearly 20%, according to the Medicare Payment Advisory Commission. However, just because physicians are outside the hospital walls doesn't mean they're free from documentation challenges. For these reasons, CDI programs are offering their assistance to physician practices, ambulatory surgical centers, and even emergency rooms. This book will explore those opportunities and take a look at how others are expanding their record review efforts in the outpatient world. This book will help you: Target the outpatient settings that offer the greatest CDI opportunities Understand the quality and payment initiatives affecting

outpatient services Understand the coding differences between inpatient and outpatient settings Identify data targets Incorporate physician needs to ensure support for program expansion Assess needs by program type

Core Entrustable Professional Activities for

Entering Residency -
Association of American Medical Colleges 2014-05-28
This landmark publication published by the AAMC identifies a list of integrated activities to be expected of all M.D. graduates making the transition from medical school to residency. This guide delineates 13 Entrustable Professional Activities (EPAs) that all entering residents should be expected to perform on day 1 of residency without direct supervision regardless of specialty choice. The Core EPAs for Entering Residency are designed to be a subset of all of the graduation requirements of a medical school. Individual schools may have additional mission-specific graduation requirements, and specialties may have specific EPAs that would be required after the student has made the specialty decision but before residency matriculation. The Core EPAs may also be foundational to an EPA for any practicing physician or for specialty-specific EPAs. Update: In August 2014, the AAMC

selected ten institutions to join a five-year pilot to test the implementation of the Core Entrustable Professional Activities (EPAs) for Entering Residency. More than 70 institutions, representing over half of the medical schools accredited by the U.S. Liaison Committee on Medical Education (LCME), applied to join the pilot, demonstrating the significant energy and enthusiasm towards closing the gap between expectations and performance for residents on day one. The cohort reflects the breadth and diversity of the applicant pool, and the institutions selected are intended to complement each other through the unique qualities and skills that each team and institution brings to the pilot. Faculty and Learners' Guide (69 pages) - Developing faculty: The EPA descriptions, the expected behaviors, and the vignettes are expected to serve as the foundation for faculty development. Faculty can use this guide as a reference for both feedback and assessment in pre-clinical

and clinical settings.-

Developing learners: Learners can also use this document to understand the core of what is expected of them by the time they graduate. The EPA descriptions themselves delineate the expectations, while the developmental progression laid out from pre-entrustable to entrustable behaviors can serve as the roadmap for achieving them.

Management of Diabetic Foot Complications - Clifford P. Shearman 2015-02-04

Public and political concern about the increasing prevalence of diabetes has prompted major concern about treatment of patients with the condition. Foot complications are some of the commonest causes of hospitalisation of people with diabetes and if not treated well often lead to

amputation. There is evidence that 85% of these amputations can be prevented by better understanding of the problem and by multi-disciplinary teams working more effectively together. This has been recognised and NICE have recently published guidelines on diabetic foot complications as have Diabetes UK and NHS Diabetes. These have been successful in raising awareness of the problem but the local multi-disciplinary teams need clear practical advice on how to manage the foot in diabetes and deliver high quality care. With the current interest in improving outcomes for patients with foot complications this is an ideal time to make a practical evidence-based handbook available. This book will provide clear practical guidelines on how to manage all aspects of the foot in diabetes as well as an in-depth analysis of the most recent evidence. The book will be based on care pathways with algorithms for each section so it would be of practical value in

treatment to disease prevention. The objective of this Special Issue is to address and disseminate the latest gait, posture, and activity monitoring systems as well as various mathematical models/methods that characterize mobility functions. This Special Issue focuses on wearable monitoring systems and physical sensors, and its mathematical models can be utilized in varied environments under varied conditions to monitor health and performance

Health Data in the Information Age - Institute of Medicine 1994-01-01

Regional health care databases are being established around the country with the goal of providing timely and useful information to policymakers, physicians, and patients. But their emergence is raising important and sometimes controversial questions about the collection, quality, and appropriate use of health care data. Based on experience with databases now in operation and in development, Health Data in

the Information Age provides a clear set of guidelines and principles for exploiting the potential benefits of aggregated health data without jeopardizing confidentiality. A panel of experts identifies characteristics of emerging health database organizations (HDOs). The committee explores how HDOs can maintain the quality of their data, what policies and practices they should adopt, how they can prepare for linkages with computer-based patient records, and how diverse groups from researchers to health care administrators might use aggregated data. Health Data in the Information Age offers frank analysis and guidelines that will be invaluable to anyone interested in the operation of health care databases.

Health Professions Education -
Institute of Medicine
2003-07-01

The Institute of Medicine study *Crossing the Quality Chasm* (2001) recommended that an interdisciplinary summit be held to further reform of health professions education in order

to enhance quality and patient safety. Health Professions Education: A Bridge to Quality is the follow up to that summit, held in June 2002, where 150 participants across disciplines and occupations developed ideas about how to integrate a core set of competencies into health professions education. These core competencies include patient-centered care, interdisciplinary teams, evidence-based practice, quality improvement, and

informatics. This book recommends a mix of approaches to health education improvement, including those related to oversight processes, the training environment, research, public reporting, and leadership. Educators, administrators, and health professionals can use this book to help achieve an approach to education that better prepares clinicians to meet both the needs of patients and the requirements of a changing health care system.
