Oxford Handbook of Clinical Rehabilitation - Anthony Ward 2009-04-30

Rehabilitation medicine is a new and growing specialty. Rehabilitation services are now available in most UK hospitals and rehabilitation has an increasing presence in the community. The Oxford Handbook of Clinical Rehabilitation second edition, outlines the basic principles of rehabilitation and the key factors that are required for a high quality rehabilitation service. The increasingly important area of technical aids and assistive technology is covered, as well as physical problems. The book outlines the management of cognitive, behavioural and emotional problems and the rehabilitation needs of people with specific disorders. A new chapter on musculoskeletal pain in common rheumatological conditions has also been included. The Oxford Handbook of Clinical Rehabilitation second edition is a comprehensive text that not only summarises the management of common symptoms and disorders but also outlines the increasing evidence base for the efficacy of these techniques. This new edition has been fully revised to appeal to the whole rehabilitation team, including junior doctors training in rehabilitation and associated specialties, senior therapists, psychologists, nurses, physiotherapists, GPs, primary care teams, and intermediate care teams.

Anxiety and Mood Disorders Following Traumatic Brain Injury - Rudi Coetzer 2018-03-29

While there are many excellent texts addressing cognitive impairment and behavioural difficulties and on rehabilitation associated with traumatic brain injury, few textbooks specifically address the most common emotional problems that can have such an adverse effect on rehabilitation and outcome. Uniquely this book deals exclusively with the identification and psychotherapeutic management of mood and anxiety disorders after traumatic brain injury. Furthermore, a systematic approach to identifying and diagnosing anxiety and mood disorders is followed throughout the text. As well as providing an introduction to anxiety and mood disorders after traumatic brain injury, it provides a psychological perspective on their evolution and management. It is aimed at a range of professionals in training (or those responsible for providing training in psychopathology, neuropsychology and psychotherapy), as well as those who may have an interest in working with the type of patients with anxiety or depression, commonly seen in post-acute brain injury rehabilitation settings. Case studies, summaries and suggested references for further reading are used throughout to facilitate understanding and teaching where relevant.

Oxford Textbook of Medicine - David A. Warrell 2003

The Oxford Textbook of Medicine provides all that any doctor needs to know to practice top-level internal medicine. It gives comprehensive coverage of the epidemiology, aetiology, and mechanism of disease, as well as clear, unambiguous coverage of the diagnosis, practical management and prevention of the entire spectrum of medical disorders. There are major introductory sections on the scientific basis of disease; and in the system-based clinical sections genetic predisposition, pathophysiology, pathogenesis, molecular mechanisms, and cell biology are covered in depth for all significant medical syndromes. Clinical

descriptions of diseases are clearly and memorably written, based on the experience and insight of the authors--many of whom are among the world's most distinguished medical scientists. Chapters are not only "evidence based" but also on clinical experience and a thorough survey of all the relevant literature. Throughout, the approach of OTM is humane and ethical and, at the same time, factual, reliable, honest (especially where knowledge is limited) and rigorously scientific. This is not just a textbook of "First World" medicine. It provides practical guidance for doctors working in a variety of medical settings the value of a logical clinical approach rather than immediate resort to expensive imaging and laboratory tests. Moore of the contributing authors than ever before are from outside Europe, including strong representation of North American medicine. The new editorial team has ensured that the OTM continues to reflect rapid changes in medical practice: there are new sections on intensive care, alcohol and drug abuse, clinical pharmacology and therapeutics, world health, clinical trials and evidence-based medicine, adolescent medicine, sports medicine, and emergency medicine; more than half the contributors are new for this edition; and most of the text has been heavily revised. The striking new page and cover design reflect the significant changes made in this new edition. The Textbook is illustrated by over 2000 two-color diagrams and many color Plates. The index is the most detailed and user-friendly of any major medical textbook: in an emergency, the reader can access information quickly- whether on the ward, in office or at home. Like its predecessors, OTM4 will be the trusted and ultimate reference in libraries, hospitals, doctors' consulting rooms, solicitors' offices, press offices, and primary care practices worldwide.

The book examines the needs of these groups while continuing to treat the women as individuals.

Equipment for Older Or Disabled People and the Law - Michael Mandelstam 1997

This comprehensive book explains the provision, both law and practice, of equipment and home adaptations to assist older or disabled people in daily living. Characterised by ill-defined statutory responsibilities and terminology, and an under-developed consumer retail market, the system of provision has long been recognised as chaotic and confusing for professionals and public alike. This is despite the fact that equipment and adaptations are meant to be a central plank of community care. Necessarily wide-ranging but maintaining its focus, the book aims critically to describe the system and thereby promote better practice. By exploring boundaries and breaking points, it will assist people to understand the law when things go wrong - from negligence to judicial review, and from contract to product safety legislation. The range of items covered is great, from alarms to artificial limbs, baths to bedrooms, chopping boards to crutches, electronic toothbrushes to environmental controls, hearing aids to hoists, incontinence pads to ironing equipment, rails to ramps, speech aids to stairlifts, and walking frames to wheelchairs.

Particular areas of enhanced coverage include headache, expanded beyond migraine to cover other presentations, and multiple sclerosis. Completely new chapters discuss the increasing role of neurogenetics in the understanding and treatment of neurological disease, the importance of pain and its management and neurological complications associated with respiratory intensive care. Following the sad death of Dr. David Marsden, Dr John Scadding has joined the editorial team retaining the 'Queen Square' connection of earlier editions.

Traumatic Brain Injury Rehabilitation - Rudi Coetzer 2006

Clinical neuropsychology and neuro-rehabilitation are disciplines that have truly developed at a phenomenal pace over the last couple of decades. Practitioners have had to make a continued commitment to staying up to date. There are many exciting theoretical, clinical and technological developments within the field. However, central to all of these remains the issue of working with persons who have experienced an extreme, life-changing experience. Often persons struggle to make sense of a traumatic brain injury and live life as it is for them now. Because of improved acute medical care, there are more survivors of traumatic brain injury today than ever before. Traumatic brain injury and the resulting disability constitute a major loss for the individual. Assisting persons with coming to terms with the changes after traumatic brain injury is probably one of the essential tasks in many rehabilitation programs taking a longer-term view regarding outcome. This book represents how neuro-rehabilitation has evolved over the past decade and includes exciting new studies in this field.

Occupational Therapy and Stroke - Judi Edmans 2011-06-09

Chapters span such key topics as early intervention and the theoretical underpinnings of stroke care, as well as the management of motor, sensory, cognitive and perceptual deficits. They are written in a user-friendly style and presented in a form that enables the therapist to review the subject prior to assessment and treatment planning. Complex problems are grouped together for greater clarity. This second edition has been fully revised and updated in line with the WHO ICF model, National Clinical Guidelines and Occupational Therapy standards. It is produced on behalf of the College of Occupational Therapists Specialist Section - Neurological Practice.

A Relational Approach to Rehabilitation - Ceri Bowen 2018-05-08

This book is one of very few books on the topic of family adaptation and relationships after brain injury. It is an important topic because of the unique impact that such a trauma can have on families. Whether professionals are working in the community doing home visits, or working in rehabilitation and care settings where family members visit, the issues are important not just to help family members cope in adverse conditions but also to improve outcomes for the people with brain-injuries. This book will be of value to all health and social care practitioners working in the field of brain injury and chronic illness (e.g. physicians, clinical psychologists, neuro-psychologists, social workers, speech therapists, occupational therapists, physiotherapists, dieticians, nurses).

Vocational Rehabilitation - Charles Gobelet 2006-01-27

It gives us great pleasure to write the preface to this book, the second in the series of monographs produced by the European Academy of Rehabilitation Medicine. No part of medicine, no clinical intervention, is complete without thinking about its effect on the person's life and the quality thereof. One of the most powerful determinants of this is work; a source not only of income, but of satisfaction and a sense of purpose and worth. The Academy, founded in 1969, is composed of senior European doctors specialising in Rehabilitation and Physical Medicine. It meets regularly to discuss matters of importance in the field, including teaching, research and ethical matters. It recognises that the ability of the speciality and of related ones to decrease dependency and increase autonomy and quality of life needs to be better known. Hence the production of these monographs. They will help readers access a vast amount of literature on the practice of rehabilitation and its effectiveness. They should be particularly useful to young doctors preparing for the European Boards certification in Physical and Rehabilitation Medicine as they are authoritative and cover subjects in depth. Topics covered in the series range from basic sciences to the most applied areas.

Oxford Handbook of Rehabilitation Medicine - Manoj Sivan 2019-10-07

The Oxford Handbook of Rehabilitation Medicine is designed to provide concise information on rehabilitation aspects of long-term medical conditions affecting adults. The book has two sections, one on clinical symptom-specific approaches and another on condition-specific approaches. The clinical approach section outlines the management of common symptoms encountered in rehabilitation settings. The section on specific conditions provides information that will enable the reader to put the symptoms in context with the condition and provide direct management in a comprehensive and holistic manner. As the practice in rehabilitation goes beyond dealing with condition specific symptoms and is more focused on problem solving, the handbook provides a solid grounding in managing common practical problems in functions such as mobility, cognition, sex, relationships and work productivity. The conditions covered include neurological, musculoskeletal, neuromuscular, cardiac, pulmonary, cancer, vascular, trauma and burns. The latest advances from the field of orthotics, prosthesis, wheelchairs, technical aids and rehabilitation technology are included. The content and layout within each chapter and handbook as a whole attempt to capture all the aspects of WHO ICF biopsychosocial model for health conditions. This Handbook, although aimed at medical doctors in the specialist area of Rehabilitation Medicine (also known as Physical and Rehabilitation Medicine in some countries), will prove useful to other members of the multidisciplinary rehabilitation team such as physiotherapists, occupational therapists, nurses, psychologists, speech and language therapists, dieticians, support workers and any other allied healthcare professionals working in rehabilitation of chronic conditions. The Handbook will also appeal to doctors in the related specialties like Neurology, Orthopaedics and Trauma, Palliative Medicine, Geriatrics, Pain Medicine and Sports and Exercise Medicine.

Spasticity - Allison Brashear, MD 2011

A Doody's Core Title 2012 Spasticity: Diagnosis and Management is the first book solely dedicated to the diagnosis and treatment of spasticity. This pioneering work defines spasticity in the broad context of Upper Motor Neuron Syndrome and focuses not on a single component, but on the entire constellation of conditions that make up the UMNS and often lead to disability. Spasticity: Diagnosis and Management clearly defines the process for the diagnosis of spasticity, the basic science behind its pathophysiology, the measurement tools used for evaluation, and reviews the available treatment options. Divided into five sections, this comprehensive clinical resource provides a roadmap for assessing the complicated picture of spasticity and choosing the appropriate interventions. Therapies including oral medications, intrathecal baclofen, botulinum toxin and phenol, and surgical options are thoroughly discussed, as are non-medical therapies and the role of the emerging technologies. Handbook of Neurological Rehabilitation - Richard J. Greenwood 2005-08-16

Provides an invaluable resource for all professions that work with patients suffering from neurological disorders.

Neurological Rehabilitation - Laura A. Graham 2013-01-10

In the past 20 years there have been many changes in the way that neurological rehabilitation is delivered worldwide. This is in part a reflection of improved acute medical therapies and intensive care and also related to the development of a more holistic approach to recovery, embracing the principles of the WHO

International Classification of Functioning as a model for rehabilitation. Traditionally, rehabilitation services have tended to develop piecemeal according to local resources and need. By definition such services should be driven by a patient-centered approach and thus there is wide variety in service provision nationally and internationally. This chapter describes the background to current service set-ups and provision, exploring models of rehabilitation delivery and common presentations in neurological rehabilitation. Relevant legislation and guidance documents are reviewed. The text provides an overview of different aspects of rehabilitation services including acute and inpatient provision, outpatient services, community-based rehabilitation, residential facilities, and vocational services.

Neurological Rehabilitation - Michael P. Barnes 2013-01-10

Neurological Rehabilitation is the latest volume in the definitive Handbook of Clinical Neurology series. It is the first time that this increasingly important subject has been included in the series and this reflects the growing interest and quality of scientific data on topics around neural recovery and the practical applications of new research. The volume will appeal to clinicians from both neurological and rehabilitation backgrounds and contains topics of interest to all members of the multidisciplinary clinical team as well as the neuroscience community. The volume is divided into five key sections. The first is a summary of current research on neural repair, recovery and plasticity. The authors have kept the topics readable for a non-scientific audience and focused on the aspects of basic neuroscience that should be most relevant to clinical practice. The next section covers the basic principles of neurorehabilitation, including excellent chapters on learning and skill acquisition, outcome measurement and functional neuroimaging. The key clinical section comes next and includes updates and reviews on the management of the main neurological disabling physical problems, such as spasticity, pain, sexual functioning and dysphagia. Cognitive, emotional and behavioural problems are just as important and are covered in the next section, with excellent chapters, for example, on memory and management of executive dysfunction. The final part draws the sections on symptom management together by discussing the individual diseases that are most commonly seen in neurorehabilitation and providing an overview of the management of the disability associated with those disorders. The volume is a definitive review of current neurorehabilitation practice and will be valuable to a wide range of clinicians and scientists working in this rapidly developing field. A volume in the Handbook of Clinical Neurology series, which has an unparalleled reputation as the world's most comprehensive source of information in neurology International list of contributors including the leading workers in the field Describes the advances which have occurred in clinical neurology and the neurosciences, their impact on the understanding of neurological disorders and on patient care

Trauma Care Pre-Hospital Manual - Ian Greaves 2018-12-07

This new book provides evidence based guidelines for the immediate clinical management of major trauma. It has been written by clinicians with many years of trauma experience, and endorsed as authoritative by Trauma Care (UK). The UK now has highly effective trauma systems. Clinical developments include the introduction of damage control resuscitation, tranexamic acid, blood product resuscitation, novel hybrid resuscitation and an emphasis on the control of major external haemorrhage as part of a new ABCDE approach. Consequently, more individuals with major trauma are surviving than ever before. Optimal pre-hospital care is essential for improved survival rates and reduced morbidity.

Work, Health and Wellbeing - Sarah Vickerstaff 2012-11-05

The relationship between health and work is widely recognized as complex and multifaceted. In the context of an aging population, our ability to enable individuals with health issues to continue working is becoming more critical. Addressing these current policy concerns, Work, Health and Wellbeing brings together new, original research from diverse disciplinary backgrounds to investigate how we can define and act on a biopsychosocial model of ill health to improve work participation in middle and later life.

Medical Rehabilitation for People with Physical and Complex Disabilities - 2000

Horizons in Medicine 18 - Jonathan M. Rhodes 2006

The papers included in this volume provide a fascinating review of contemporary pathology, diagnostic techniques, management approaches and pharmacological interventions. They are based on the popular Advanced Medicine conference organised annually by the Royal College of Physicians which aims to

present 'the latest cutting edge advances in clinical medicine, supported by improved understanding of disease mechanisms'. Each chapter, by an eminent physician from one of a variety of specialties included, is followed by self-assessment questions, which allow the reader to ensure they have fully absorbed and correctly understood the chapter's key messages. Whether the reader's specific interest lies in, for example, 'Attacking the disease spiral in COPD', 'New drugs for diabetes' or 'Advances in Parkinson's disease' - to name but a few of the topics covered - the remainder of the book will provide them with an informative summary of advances in other fields of medicine.

Community Care Practice and the Law - Michael Mandelstam 1999

This second edition of *Community Care Practice and the Law* has been substantially rewritten and restructured to reflect the rapid change affecting community care in legislation, the law courts, policy and practice. The book bridges the gap between law and practice by juxtaposing fully and systematically legislation, legal judgments in the courts, local ombudsman and health service ombudsman findings, Parliamentary debates and answers, and numerous reports about practice from the Department of Health, voluntary organisations, professional associations and academics. Distinctive features of the book include: two large digests of cases containing well over three hundred legal judgments and local ombudsman investigations; a chapter consisting of a practical checklist of questions - for managers, practitioners and users of services and their advisors - to check the lawfulness of policies, eligibility criteria and individual decisions; two overview, stand-alone chapters, one summarising the system, the other highlighting underlying themes and mechanisms; an inclusive approach embracing not only a range of both residential and non-residential care services, but also equipment and home adaptations, carers, direct payments, NHS services generally and continuing care, moving and handling law, legislation and guidance (old and new) underlying joint working and joint finance; avoidance of jargon.

Clinical Uses of Botulinum Toxins - Anthony B. Ward 2007-03-22

In this book, a strong, international team of experts outline the basic neurochemistry of botulinum toxins and chart the progress of the drug from laboratory to clinic. Then individual chapters summarize their use for the main clinical indications in the context of other available treatments. This book will be of interest to neuroscientists and practising clinicians working in a wide range of specialities, from neurology and dermatology to pediatrics, plastic surgery and rehabilitation medicine.

EBOOK: Public Health - Angela Scriven 2007-08-16

"From Sure Start to healthy workplaces, health action zones to community regeneration, this volume makes

the leap from research to action." Professor Richard Parish, Chief Executive, The Royal Society for the Promotion of Health. What is public health and how has it changed over time? What is the social context of public health and what are the dominant 21st century issues? What strategies are in place to address population health? This important book makes a significant contribution to the emergent body of public health knowledge by examining debates around the social context of health, including key socio-economic, environmental and cultural factors. In doing so, the text locates within a social context the theoretical debates and problems surrounding public health, and analyzes the practical public health strategies and solutions that have been developed to address them. The book moves beyond traditional theoretical discourse to include coverage of: The thinking, frameworks and processes that are actively shaping public health in the 21st century. Provides tangible examples of public health strategies that have recently been introduced to tackle the social determinants of health. The use of media strategies to promote health. Public Health is key reading for students undertaking courses in health studies, health promotion, nursing, public health, social policy, social work and sociology. Topical Issues in Pain 5 - Louis Gifford 2013-09

Volumes of the *Topical Issues in Pain* series are now a common sight in Physiotherapy departments and practices throughout the UK. More and more students are using them to learn clinical skills and as key references for study and research. The accolades the series has received from within and outside the profession are both moving and cheering for Physiotherapy. This 5th volume energetically moves the boundaries of Physiotherapy on, divided into 5 sections, it considers some of the most important issues and challenges facing clinicians and society today. The section on return to work (3) examines the financial and human costs of work absence, the difficulties that surround and often prevent people in pain from returning to work and finally details practical ways of helping patients actually get there. It is becoming increasingly clear that the traditional treatments being offered for common and benign pain states, whether by therapists, Drs or Surgeons, are ineffective when measured in terms of return to work and confident function - why is this? The answers most likely lie in the broader, multidimensional, understanding of pain biology (section 5) that is embraced in the principles and practice of cognitive-behavioural therapies and approaches (section 4), especially when they are used alongside physical rehabilitation programmes (sections 1, 2, 3 & 4). Vitality, these proven approaches are patient-orientated requiring highly trained experts in listening, explaining and communicating (sections 1 & 2). This book acknowledges that there is no simple 'fix' that takes a hurting human being from a state of vulnerability back to one of physical confidence and full working potential. What it does though, is breathe a breath of optimism into the current state-of-the-art of the physical pain-management process that, when skilfully applied, actually does help a great deal. The *Topical Issues in Pain* series derives from the work, study days and seminars of the Physiotherapy Pain Association and is written by clinicians for clinicians.
