This book is a comprehensive collection of cases, statutes, regulations and readings focused on the commercial development of new technologies, primarily by start-up and early-stage companies. It defines the technology innovation process as the set of decisions and actions by which an invention is transformed from a laboratory prototype into a commercially viable product or process; and defines the technology innovation period as the time between the point of invention (reduction to practice) and the point of market introduction. Technology Innovation Law and Practice addresses the gap in academic attention paid to the field of technology innovation. The book provides students, faculty and practitioners, both in law and other disciplines, with a single source of in-depth information on the laws that affect the technology innovation process. **Economics** - 2015

Russell Cooper and Andrew John have written an economics text aimed directly at students from its very inception. You're thinking, "Yeah, sure. I've heard that before." This textbook, *Economics: Theory Through Applications*, centers around student needs and expectations through two premises: Students are motivated to study economics if they see that it relates to their own lives. Students learn best from an inductive approach, in which they are first confronted with a problem, and then led through the process of solving that problem. Many books claim to present economics in a way that is digestible for students; Russell and Andrew have truly created one from scratch. This textbook will assist you in increasing students' economic literacy both by developing their aptitude for economic thinking and by presenting key insights about economics that every educated individual should know. How? Russell and Andrew have done three things in this text to accomplish that goal: Applications Ahead of Theory: They present all the theory that is standard in Principles books. But by beginning with applications, students get to learn why this theory is needed. Learning through Repetition: Important tools appear over and over again, allowing students to learn from repetition and to see how one framework can be useful in many different contexts. A Student's Table of Contents vs. An Instructor's Table of Contents: There is no further proof that Russell and Andrew have created a book aimed specifically at educating students about economics than their two tables of contents.

*The Microeconomics Anti-Textbook* - Rod Hill 2021-12-02

Mainstream textbooks present economics as an objective science, free from value judgements. The

*Microeconomics Anti-Textbook* demonstrates this to be a myth – one which serves to make such textbooks not only off-puttingly bland, but also dangerously misleading in their justification of the status quo and neglect of alternatives. In this fully updated and expanded edition of their celebrated book, Professors Rod Hill and Tony Myatt lay out the essentials of each topic in the standard texts in a clear and concise way, before presenting an 'anti-text' analysis and critique. Challenging the assumptions, arguments, and models, Hill and Myatt provide the essential guide to decoding the textbooks, and show that real economics is far more interesting - and subversive - than the simplistic version presented to students.
