**Managing Service Productivity** - Ali Emrouznejad 2014-07-31

This volume describes how frontier efficiency methodologies such as Data Envelopment Analysis (DEA) and other techniques such as multi-criteria decision making can help service industries to improve their performance by providing a ranking of best-practice efficient service units and by identifying sources of inefficiency for each service unit. It explains how they can be used to determine potential improvement targets for each of the inefficient service units, to identify peers for each service organization and to provide a basis for continuous performance improvement. Presenting applications in a variety of industries, this book will be useful for the service management to improve service productivity, profitability, sustainability and quality and effectiveness of service deliveries. A free trial version of the World's leading Data Envelopment Analysis Software (PIM-DEA) is available for readers of this book.

**Validation of Dynamic Analyses of Dams and Their Equipment** - Jean-Jacques Fry 2018-06-27

Validation of Dynamic Analyses of Dams and Their Equipment is the outcome of a three year cooperation program between CFBR (Comite Francais des Barrages et Reservoirs or French Committee on Large dams) and JCOLD (Japan Commission on Large Dams), and focusses on the dynamic behavior of concrete and embankment dams analyzed based on acceleration records of the JCOLD data base. The book covers a broad range of topics, including simplified and detailed methods of dynamic analysis for the seismic response of concrete and embankment dams compared with measured behavior. The response of embankment dams subjected to a 1.0 g foundation acceleration time history is computed by several analytical methods and compared. The modelling of stress-strain behavior of compacted soils for seismic stability analysis of earth-fill dams and its application for a failed earthfill dam is described. The cracking of the face slab of four faced rockfill dams during earthquakes is analyzed. The seismic behavior of concrete arch dams is discussed by the comparison of numerical and experimental results. Displacement-based seismic assessment of concrete dams is presented. Finally the book contains a comparison between the Japanese and French design criteria of gates and a comparison of the analysis of gates and field measurements. Validation of Dynamic Analyses of Dams and Their Equipment will be useful to professional and academics involved or interested in dam engineering.

*Algorithms from and for Nature and Life* - Berthold Lausen 2013-08-28

This volume provides approaches and solutions to challenges occurring at the interface of research fields such as, e.g., data analysis, data mining

and knowledge discovery, computer science, operations research, and statistics. In addition to theory-oriented contributions various application areas are included. Moreover, traditional classification research directions concerning network data, graphs, and social relationships as well as statistical musicology describe examples for current interest fields tackled by the authors. The book comprises a total of 55 selected papers presented at the Joint Conference of the German Classification Society (GfKI), the German Association for Pattern Recognition (DAGM), and the Symposium of the International Federation of Classification Societies (IFCS) in 2011.

*Critical analysis and evaluation of strategies adopted by world class financial institutions (2006)* - Nicole Burkardt 2010-08-05

Seminar paper from the year 2007 in the subject Business economics - Operations Research, grade: A (73%), University of Sunderland, language: English, abstract: The world today is changing faster than ever before. Technological developments, financial constraints, expanding markets, mergers and acquisitions, new government legislation are all putting pressure on organisations to change and stay dynamic (Davenport and Short, 1990; Aijo et al., 1996). It is argued that organisations have to pay attention to environmental changes in order to survive in the market (Fahey and Narayanan, 1986). Especially the financial sector is driven by two key environmental features; global deregulation of the sector and global decline in cost and technological changes such as the use of electronic media for service provisions and greater use of the Internet for banking transactions (Grosse, 2004). Corporate Strategy is the cornerstone of the success or failure of a company. It gives direction to corporate values, goals, mission and culture. This paper defines the core competencies and dynamic capabilities of four of the leading financial institutions (for a company brief refer to Appendix A, SWOT analysis Appendix B) as well as the importance of corporate governance. Furthermore based on the information gathered it will be discussed what key challenges Citibank and Deutsche Bank are facing, the significance of these challenges and how they might be overcome. Finally, strategic implementations are suggested.

**Models, Algorithms and Technologies for Network Analysis** -

Mikhail V. Batsyn 2014-10-30

This volume compiles the major results of conference participants from the "Third International Conference in Network Analysis" held at the Higher School of Economics, Nizhny Novgorod in May 2013, with the aim to initiate further joint research among different groups. The contributions in this book cover a broad range of topics relevant to the theory and practice of network analysis, including the reliability of complex networks, software, theory, methodology, and applications. Network analysis has become a major research topic over the last several

years. The broad range of applications that can be described and analyzed by means of a network has brought together researchers, practitioners from numerous fields such as operations research, computer science, transportation, energy, biomedicine, computational neuroscience and social sciences. In addition, new approaches and computer environments such as parallel computing, grid computing, cloud computing, and quantum computing have helped to solve large scale network optimization problems.

*Regional Sustainability* - Irene Ring 2012-12-06

This book presents interdisciplinary approaches towards achieving regional sustainability. The relevance of interdisciplinary research and its consequences for economic research into the environment are elaborated, and new approaches are developed to integrate knowledge from ecological and social sciences into economic research. *Regional Sustainability* includes the development of theoretical concepts as well as applied regional case studies relating to nature conservation and agricultural policies, coastal management and air pollution problems. Centered around the themes of decision-making processes, modelling as support for policy analysis and the evaluation of policies, it successfully addresses problems facing researchers and policy-makers in the context of regional sustainable development. The book pays special attention to human behaviour and stakeholders in decision-making processes, and contributes to the transition from ecological economics to socio-ecological economics.

*Handbook of International Banking* - A. W. Mullineux 2003-01-01

'The Handbook is especially recommended to MBA students and faculty and belongs in the reference collections of academic and research libraries. Although each chapter may serve as a self-contained unit, readers will want to look at the larger picture by comparing and contrasting articles found in each part of the work. It should prove to be a helpful source for those studying international banking, economics and finance, and international business.' - Lucy Heckman, American Reference Books Annual 2004 *The Handbook of International Banking* provides a clearly accessible source of reference material, covering the main developments that reveal how the internationalization and globalization of banking have developed over recent decades to the present, and analyses the creation of a new global financial architecture. The Handbook is the first of its kind in the area of international banking with contributions from leading specialists in their respective fields, often with remarkable experience in academia or professional practice. The material is provided mainly in the form of self-contained surveys, which trace the main developments in a well-defined topic, together with specific references to journal articles and working papers. Some contributions, however, disseminate new empirical findings especially where competing paradigms are evaluated. The Handbook is divided into four areas of interest. The first deals with the globalization of banking and continues on to banking structures and functions. The authors then focus on banking risks, crises and regulation and finally the evolving international financial architecture. Designed to serve as a source of supplementary reading and inspiration, the Handbook is suited to a range of courses in banking and finance including post-experience and in-house programmes for bankers and other financial services practitioners. This outstanding volume will become essential reference for policymakers, financial practitioners as well as academics and researchers in the field.
