One Plus Two - Christina Butrum 2020-02-10

Hannah Michaelson wants nothing more than a fresh start and a safe place to stay. The only problem? She's stranded roadside in a small town in the middle of winter. Even worse? Her sister's baby is asleep in the back seat. Carter Mitchell has one goal in life-to be the best mechanic he can be while running a successful shop. That, and to avoid love at all costs. But when his family calls on him to help a distressed woman on the side of the road, he doesn't hesitate. Certain that he can stay strong in the face of the stranger's beauty, he agrees to help. Soon enough, the rugged mechanic realizes there's more to Hannah's extended stay in Maple Glen than he realized. His aunt is playing matchmaker again, but there's something Hannah isn't telling him.

Essential Forensic Biology - Alan Gunn 2011-09-09

This book is an introduction to the application of biology in legal investigations. Fully revised and updated throughout, the second edition of this highly successful textbook offers an accessible overview to the essentials of the subject providing a balanced coverage of the range of organisms used as evidence in forensic investigations; invertebrates, vertebrates, plants and microbes. The book provides an overview of the decay process and discusses the role of forensic indicators - human fluids and tissues, including blood cells, bloodstain pattern analysis, hair, teeth, bones, and wounds. It also examines the study of forensic biology in cases of suspicious death. The coverage of molecular techniques has been expanded throughout with additional material on bioterrorism and wildlife forensics now included. The use of DNA and RNA for the identification of individuals and their personal characteristics is now covered along with a discussion of the ethical issues associated with the maintenance of DNA databases. Fully revised and updated new edition of this highly successful textbook. Includes self-assessment questions at the end of each chapter and case studies. Now in full colour throughout. Includes a supplementary website (www.wileyurope.com/college/gunn) covering additional material and self-test questions to reinforce student understanding. From the reviews of the first edition: "The author does an excellent job of demonstrating how biological science can, and does, contribute to legal investigations..." —THE

QUARTERLY REVIEW OF BIOLOGY "...a super book ...not a book that will languish on library shelves. Buy it!" —JOURNAL OF BIOLOGICAL EDUCATION "...naturalists and biologists will find much of interest within these books...new light on the application of their own specialism..." —THE NATURALIST "Overall, I give it my highest recommendation. I was unable to find a single paragraph that was no fascinating, despite being sad or gruesome at times." —E-STREAMS

DisCrit—Disability Studies and Critical Race Theory in Education - David J. Connor 2016

This groundbreaking volume brings together major figures in Disability Studies in Education (DSE) and Critical Race Theory (CRT) to explore some of today's most important issues in education. Scholars examine the achievement/opportunity gaps from both historical and contemporary perspectives, as well as the overrepresentation of minority students in special education and the school-to-prison pipeline. Chapters also address school reform and the impact on students based on race, class, and dis/ability and the capacity of law and policy to include (and exclude). Readers will discover how some students are included (and excluded) within schools and society, why some citizens are afforded expanded (or limited) opportunities in life, and who moves up in the world and who is trapped at the "bottom of the well." Contributors: D.L. Adams, Susan Baglieri, Stephen J. Ball, Alicia Broderick, Kathleen M. Collins, Nirmala Erevelles, Edward Fergus, Zanita E. Fenton, David Gillborn, Kris Guitierrez, Kathleen A. King Thorius, Elizabeth Kozleski, Zeus Leonardo, Claustina Mahon-Reynolds, Elizabeth Mendoza, Christina Paguyo, Laurence Parker, Nicola Rollock, Paolo Tan, Sally Tomlinson, and Carol Vincent "With a stunning set of authors, this book provokes outrage and possibility at the rich intersection of critical race, class, and disability studies, refracting back on educational policy and practices, inequities and exclusions but marking also spaces for solidarities. This volume is a must-read for preservice, and long-term educators, as the fault lines of race, (dis)ability, and class meet in the belly of educational reform movements and educational justice struggles." —Michelle Fine, distinguished professor of Critical Psychology and Urban Education, The Graduate Center, CUNY "Offers those who sincerely seek to better understand the complexity of the intersection of race/ethnicity, dis/ability, social class, and gender a stimulating read that sheds new light on the root of some of our long-standing societal and educational inequities." —Wanda J. Blanchett, distinguished professor and dean, Rutgers University, Graduate School of Education

Long Walk to Freedom - Nelson Mandela 2008-03-11

The book that inspired the major new motion picture Mandela: Long Walk to Freedom. Nelson Mandela is

one of the great moral and political leaders of our time: an international hero whose lifelong dedication to the fight against racial oppression in South Africa won him the Nobel Peace Prize and the presidency of his country. Since his triumphant release in 1990 from more than a quarter-century of imprisonment, Mandela has been at the center of the most compelling and inspiring political drama in the world. As president of the African National Congress and head of South Africa's anti-apartheid movement, he was instrumental in moving the nation toward multiracial government and majority rule. He is revered everywhere as a vital force in the fight for human rights and racial equality. *LONG WALK TO FREEDOM* is his moving and exhilarating autobiography, destined to take its place among the finest memoirs of history's greatest figures. Here for the first time, Nelson Rolihlahla Mandela tells the extraordinary story of his life--an epic of struggle, setback, renewed hope, and ultimate triumph.

The Search for Biological Active Agent(s) From Actinobacteria, 2nd Edition - Learn-Han Lee 2020-03-27

There is a large market demand for new drugs. The existing chronic or common ailments without cures, development of new diseases with unknown causes, and the widespread existence of antibiotic-resistant pathogens, have driven this field of research further by looking at all potential sources of natural products. To date, microbes have made a significant contribution to the health and well-being of people globally. The discoveries of useful metabolites produced by microbes have resulted in a significant proportion of pharmaceutical products in today's market. Therefore, the investigation and identification of bioactive compound(s) producing microbes is always of great interest to researchers. Actinobacteria are one of the most important and efficient groups of natural metabolite producers. Among the numerous genera, *Streptomyces* have been recognized as prolific producers of useful natural compounds, as they provide more than half of the naturally-occurring antibiotics isolated to-date and continue to emerge as the primary source of new bioactive compounds. Certainly, these potentials have attracted ample research interest and a wide range of biological activities have been subsequently screened by researchers with the utilization of different *In vitro* and *In vivo* model of experiments. Literature evidence has shown that a significant number of interesting compounds produced by Actinobacteria were exhibiting either strong anticancer or neuroprotective activity. The further in depth studies have then established the modulation of apoptotic pathway was involved in those observed bioactivities. These findings indirectly prove the biopharmaceutical potential possessed by Actinobacteria and at the same time substantiate the importance of diverse

pharmaceutical evaluations on Actinobacteria. In fact, many novel compounds discovered from Actinobacteria with strong potential in clinical applications have been developed into new drugs by pharmaceutical companies. Together with the advancement in science and technology, it is predicted that there would be an expedition in discoveries of new bioactive compounds producing Actinobacteria from various sources, including soil and marine sources. In light of these current needs, and great interest in the scope of this research, this book seeks to contribute on the investigation of different biological active compound(s) producing actinobacteria which are exhibiting antimicrobial, antioxidant, neuroprotective, anticancer activities and similar.

The Philosophy of Psychology - George Botterill 1999-08-19

What is the relationship between common-sense, or 'folk', psychology and contemporary scientific psychology? Are they in conflict with one another? Or do they perform quite different, though perhaps complementary, roles? George Botterill and Peter Carruthers discuss these questions, defending a robust form of realism about the commitments of folk psychology and about the prospects for integrating those commitments into natural science. Their focus throughout the book is on the ways in which cognitive science presents a challenge to our common-sense self-image - arguing that our native conception of the mind will be enriched, but not overturned, by science. The Philosophy of Psychology is designed as a textbook for upper-level undergraduate and beginning graduate students in philosophy and cognitive science, but as a text that not only surveys but advances the debates on the topics discussed, it will also be of interest to researchers working in these areas.

The Castaway - Rabindrantath Tagore 2014-06-04

Towards evening the storm was at its height. From the terrific downpour of rain, the crash of thunder, and the repeated flashes of lightning, you might think that a battle of the gods and demons was raging in the skies. Black clouds waved like the Flags of Doom. The Ganges was lashed into a fury, and the trees of the gardens on either bank swayed from side to side with sighs and groans.

Transport in Plants II - U. Lüttge 1976-05-01

As plant physiology increased steadily in the latter half of the 19th century, problems of absorption and transport of water and of mineral nutrients and problems of the passage of metabolites from one cell to another were investigated, especially in Germany. JUSTUS VON LIEBIG, who was born in Darmstadt in 1803, founded agricultural chemistry and developed the techniques of mineral nutrition in agriculture during the 70 years of his life. The discovery of plasmolysis by NAGEL! (1851), the investigation of

permeability problems of artificial membranes by TRAUBE (1867) and the classical work on osmosis by PFEFFER (1877) laid the foundations for our understanding of soluble substances and osmosis in cell growth and cell mechanisms. Since living membranes were responsible for controlling both water movement and the substances in solution, "permeability" became a major topic for investigation and speculation. The problems then discussed under that heading included passive permeation by diffusion, Donnan equilibrium adjustments, active transport processes and antagonism between ions. In that era, when organelle isolation by differential centrifugation was unknown and the electron microscope had not been invented, the number of cell membranes, their thickness and their composition, were matters for conjecture. The nature of cell surface membranes was deduced with remarkable accuracy from the reactions of cells to substances in solution. In 1895, OVERTON, in U. S. A. , published the hypothesis that membranes were probably lipid in nature because of the greater penetration by substances with higher fat solubility.
