How Numbers Work - New Scientist
2018-05-01

Think of a number between one and ten No, hang on, let's make this interesting. Between zero and infinity. Even if you stick to the whole numbers, there are a lot to choose from - an infinite number in fact. Throw in decimal fractions and infinity suddenly gets an awful lot bigger (is that even possible?) And then there are the negative numbers, the imaginary numbers, the irrational numbers like π which never end. It literally never ends. The world of numbers is indeed strange and beautiful. Among its inhabitants are some really notable characters - π , e , the square root of minus two and the famous golden ratio to name just a few.

Prime numbers occupy a special status. Zero is very odd indeed. And even some apparently common-or-garden integers such as 37 have special properties. Adventures In Mathematics takes a tour of this mind-blowing but beautiful world of numbers and the mathematical rules that connect them. Find out mathematicians' favourite numbers, and the ones they are afraid of (spoiler: it isn't 13). Discover the incredible connection between numbers and the rules of nature. And learn some amazing mathematical tricks that will keep you amused for hours.

Life Sciences and Related Fields - International Union of Microbiological Societies 2011-12-02
During the last decade, national and international scientific organizations have become increasingly engaged in considering how to respond to the biosecurity implications of developments in the life sciences and in assessing trends in science and technology (S&T) relevant to biological and chemical weapons nonproliferation. The latest example is an international workshop, Trends in Science and Technology Relevant to the Biological Weapons Convention, held October 31 -

November 3, 2010 at the Institute of Biophysics of the Chinese Academy of Sciences in Beijing. Life Sciences and Related Fields summarizes the workshop, plenary, and breakout discussion sessions held during this convention. Given the immense diversity of current research and development, the report is only able to provide an overview of the areas of science and technology the committee believes are potentially relevant to the future of the Biological and Toxic Weapons Convention (BWC), although there is an effort to identify areas that seemed particularly ripe for further exploration and analysis. The report offers findings and conclusions organized around three fundamental and frequently cited trends in S&T that affect the scope and operation of the convention: The rapid pace of change in the life sciences and related fields; The increasing diffusion of life sciences research capacity and its applications, both internationally and beyond traditional research institutions; and The extent to which additional scientific and technical disciplines beyond biology are increasingly involved in life sciences research. The report does not make recommendations about policy options to respond to the implications of the identified trends. The choice of such responses rests with the 164 States Parties to the Convention, who must take into account multiple factors beyond the project's focus on the state of the science.

The Life Scientific: Virus Hunters - Anna Buckley 2021-01-07

BBC Radio 4's celebrated THE LIFE SCIENTIFIC has featured some of the world's most renowned experts in the field of deadly viruses. The interviews make sobering reading, a reminder of all the deadly viruses that have threatened global health, and why for the scientists working on the front line in the war against viruses, the arrival of Covid-19 came as no surprise. Among the contributors to this all-too-timely book are: Jeremy Farrar, before he became Director of the Wellcome Trust, worked in an Infectious Diseases Hospital in Vietnam. He was on the frontline tackling SARS and nine months later a highly pathogenic strain of bird flu, H5N1. Peter Piot was at the forefront of the Ebola epidemic in West Africa. He was the first to identify HIV in Africa. It took him fifteen years to persuade the world that it was also a heterosexual disease. Later as Executive Director of UN AIDS he fought for years to get the UN to take the threat

of HIV seriously. Jonathan Ball studies how viruses operate at the molecular level, hoping to find their Achilles' heel and so develop effective vaccines. During the West Africa Ebola epidemic, he studied how the genome of the Ebola virus evolved as it spread from Guinea to Liberia and Sierra Leone. He has shown that as this virus (which more happily lives in bats) infects more humans, it becomes ever more infectious. Wendy Barclay seeks to understand how viruses are able to jump from animals to humans and why some viruses are so much more dangerous to humans than others. Most Londoners had no idea they were infected during the Swine Flu pandemic of 2009. The Bird Flu epidemic in Asia claimed thousands of lives Kate Jones is a bat specialist who works on how ecological changes and human behaviour accelerate the spread of animal viruses into humans. Bats have been infected with coronaviruses for more than 10,000 years.

MATLAB for Engineering and the Life Sciences - Joseph Tranquillo 2022-05-31

In recent years, the life sciences have embraced simulation as an important tool in biomedical research. Engineers are also using simulation as a powerful step in the design process. In both arenas, Matlab has become the gold standard. It is easy to learn, flexible, and has a large and growing userbase. MATLAB for Engineering and the Life Sciences is a self-guided tour of the basic functionality of MATLAB along with the functions that are most commonly used in biomedical engineering and other life sciences. Although the text is written for undergraduates, graduate students and academics, those in industry may also find value in learning MATLAB through biologically inspired examples. For instructors, the book is intended to take the emphasis off of learning syntax so that the course can focus more on algorithmic thinking. Although it is not assumed that the reader has taken differential equations or a linear algebra class, there are short introductions to many of these concepts. Following a short history of computing, the MATLAB environment is introduced. Next, vectors and matrices are discussed, followed by matrix-vector operations. The core programming elements of MATLAB are introduced in three successive chapters on scripts, loops, and conditional logic. The last three chapters outline how to manage the input and output of data, create professional quality graphics and find and use Matlab toolboxes. Throughout, biomedical examples are used to illustrate MATLAB's capabilities. Table of Contents: Introduction / Matlab Programming Environment / Vectors / Matrices / Matrix -- Vector Operations / Scripts and Functions / Loops / Conditional Logic / Data In, Data Out / Graphics / Toolboxes
