Transforming the Workforce for Children Birth Through Age 8 - National Research Council
2015-07-23

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well.

Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children.

This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve

professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Principles of Psychology - S. Marc Breedlove 2015

Organized around four well-established core principles, *Principles of Psychology* provides students with a framework to understand the science of behavior. Written in a conversational style, the text is organized around the following four well-established principles that serve as touchstones for the field of psychology: --The mind is a process at work in a physical machine, the brain. --We are consciously aware of only a fraction of our mental activity. --We constantly modify our behavior, beliefs, and attitudes according to what we perceive about the people around us. --Experience physically alters the structure and function of the brain. With these four principles as a framework for the text, *Principles of Psychology* emphasizes that psychology is a science through discussion of relevant big-picture and proven concepts and cutting-edge research-based investigations that examine behavioral, psychological, and neuroscience experiments. By presenting data and facts from other scientific disciplines, as well as real-world vignettes and stories, Marc Breedlove teaches the reader how to think critically and scientifically about the underlying mechanisms of behavior. In-Text Features -- Vignette Each chapter begins with a story, an

instance when behavior has a big impact on someone's life. The chapter returns to the vignette several times as we cover findings that relate to that particular case. --Researchers at Work In every chapter, important discoveries are explained and illustrated to highlight the process of experimentation and hypothesis testing. Over the course of the book, the progression of experiments provides an increasingly sharper picture of the factors shaping behavior. --Skeptic at Large Intended to sharpen the student's critical thinking skills, these boxes explore a widespread misconception and demonstrate how scientific research disproves it. The exploration of scientific experimentation also reinforces the Researchers at Work feature. --Psychology in Everyday Life These are topics where knowledge of psychology might be applicable to everyday life, such as whether people with schizophrenia are violent, the importance of "blind" auditions for musicians, how to stop smoking, or how conditioned taste aversion might cause you to stop eating sushi when you used to love it. --The Cutting Edge Just prior to the end of every chapter, this feature explores an exciting report of current research. Showing students these vibrant and bold experiments will emphasize that psychology research remains alive and well. --Think Like a Psychologist: Principles in Action To close each chapter, each principle is related back to the vignette to show the student that when they observe an interesting behavior they can recall and apply the four principles. If they can do this, they will indeed be thinking like a psychologist.

Assessing 21st Century Skills - National Research Council 2011-09-16

The routine jobs of yesterday are being replaced by technology and/or shipped off-shore. In their place, job categories that require knowledge management, abstract reasoning, and personal services seem to be growing. The modern workplace requires workers to have broad cognitive and affective skills. Often referred to as "21st century skills," these skills include being able to solve complex problems, to think critically about tasks, to effectively communicate with people from a variety of different cultures and using a variety of different techniques, to work in collaboration with others, to adapt to rapidly changing environments and conditions for performing tasks, to effectively manage one's work, and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first, held in 2007, was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop, held in 2009, was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high-quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore

strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops, with special attention to recent developments in technology-enabled assessment of critical thinking and problem-solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below:

Cognitive skills: nonroutine problem solving, critical thinking, systems thinking
Interpersonal skills: complex communication, social skills, team-work, cultural sensitivity, dealing with diversity
Intrapersonal skills: self-management, time management, self-development, self-regulation, adaptability, executive functioning

Assessing 21st Century Skills provides an integrated summary of the presentations and discussions from both parts of the third workshop.
