

Statistica Economica

Recognizing the pretentiousness ways to get this books **Statistica Economica** is additionally useful. You have remained in right site to begin getting this info. get the Statistica Economica partner that we offer here and check out the link.

You could buy lead Statistica Economica or get it as soon as feasible. You could speedily download this Statistica Economica after getting deal. So, bearing in mind you require the ebook swiftly, you can straight acquire it. Its correspondingly definitely easy and for that reason fats, isnt it? You have to favor to in this aerate

Agricultural Economics Literature - 1940

Kondratieff Waves, Warfare and World Security - Tessaleno C. Devezas 2006

"Considerable progress has been made in understanding the underlying mechanisms driving the long-wave behavior of the world socioeconomic development. In spite of this progress one recognizes that many aspects related with these underlying driving forces remained unsolved. One of these aspects endured, perhaps as the most controversial one: the close relationship between K-waves and the outbreak of major wars. Social scientists and politicians are well acquainted with the fact that chance events have been responsible for the outbreak of wars and their course and outcome. Two main trends are now acknowledged: the increasing recognition of the existence of some cyclical patterns of warfare involving the core of the world system, and a shift toward newly evolving patterns involving non-state actors and asymmetric warfare. We may tentatively agree that wars are not merely the result of blind social and political forces, but patterned according to long socioeconomic cycles and the result of deep and general laws underlying the co-evolutionary unfolding of the world system. In the first part of this book, the reader will find a mix of contributions dealing with new visions or revisions of the concept of long waves considered from very different perspectives related to their unfolding. Those contributions discussing the issue of K-waves and their relation with military conflicts objectively, following old and / or new conceptualizations of the phenomenon, were selected to form the books second part. Finally those contributions with strong emphasis on the analysis of future scenarios, related or not related with warfare and / or world security compose the body of the third part."

Research in the History of Economic Thought and Methodology - Luca Fiorito 2022-09-08

Research in the History of Economic Thought and Methodology

Metron - Corrado Gini 1975

Includes list of publications received.

Business Cycles in Economic Thought - Alain Alcouffe 2017-01-06

Business Cycles in Economic Thought underlines how, over the time span of two centuries, economic thought interacted with cycles in a continuous renewal of theories and rethinking of policies, whilst economic actions embedded themselves into past economic thought. This book argues that studying crises and periods of growth in different European countries will help to understand how different national, political and cultural traditions influenced the complex interaction of economic cycles and economic theorizing. The editors of this great volume bring together expert contributors consisting of economists, historians of economic thought and historians of economics, to analyse crises and theories of the nineteenth and the twentieth century. This is alongside a comprehensive outlook on the most relevant advances of economic theory in France, Germany and Italy, as well as coverage of non-European countries, such as the United States. Several of the highly prestigious Villa Vigoni Trilateral Conferences formed the background for the discussions in this book. This volume is of great interest to students and academics who study history of economic thought, political economy and macroeconomics.

The Mountains of the Mediterranean World - J. R. McNeill 2003-12-18

An environmental history of the mountain areas of Turkey, Greece, Italy, Spain, and Morocco.

Routledge Library Editions: Gramsci - Various Authors 2022-07-30

In the years since the publication of the Prison Notebooks, the interest and importance of Antonio Gramsci's contribution to Marxist thought and political analysis has become widely recognised. The concern to explore and identify the structures of the capitalist state is both the principal characteristic of Gramsci's theoretical and political writings and also the inspiration for his writings on Italian history. This set re-issues four volumes by leading commentators on Gramsci's politics and philosophy which were originally published between 1979 and 1981.

Spatial Econometrics - Giuseppe Arbia 2006-06-08

This book bridges the gap between economic theory and spatial econometric techniques. It is accessible to those with only a basic statistical background and no prior knowledge of spatial econometric methods. It provides a comprehensive treatment of the topic, motivating the reader with examples and analysis. The volume provides a rigorous treatment of the basic spatial linear model, and it discusses the violations of the classical regression assumptions that occur when dealing with spatial data.

Statistica economica - Libero Lenti 1972

Metaphors in the History of Economic Thought - Roberto Baranzini 2022-08-25

Metaphors in the History of Economic Thought: Crises, Business Cycles and Equilibrium explores the evolution of economic theorizing through the lens of metaphors. The edited volume sheds light on metaphors which have been used by a range of key thinkers and schools of thought to describe economic crises, business cycles and economic equilibrium. Structured in three parts, the book examines an array of metaphors ranging from mechanics, waves, storms, medicine and beyond. The international panel of contributors focuses primarily on economic literature up to the Second World War, knowing again that the use of metaphors in economic work has seen a resurgence since the 1980s. This work will be of interest to advanced students and researchers in the history of economic thought, and economics and language.

The Laboring Classes in Renaissance Florence - Samuel Kline Cohn 2013-10-02

The Laboring Classes in Renaissance Florence investigates the part of Renaissance history that refers to the notarial and criminal archives of Florence. The book presents the relations between the laboring classes and the ruling elite. It demonstrates the class struggle that happened in the Renaissance period. The text also describes the progress of class struggle in periods preceding the Industrial Revolution. It discusses the reforms of the political strategies, list of protests, and awareness of artisans and laborers in preindustrial milieu. Another topic of interest is the tax revolt, food riot, and rural rebels' resistance during the Renaissance period. The section that follows describes the emergence of ethnic ghettos, impact of immigration, and distribution of population. The book will provide valuable insights for historians, students, and researchers in the field of medieval history.

Landownership and Power in Modern Europe - Martin Blinkhorn 1991

This book provides a comparative analysis of the relationship between the possession of land and the exercise of power in 19th and 20th-century Europe. 12 historians examine this relationship in several regions of France, Spain, Germany, Italy, Great Britain and Ireland. The settings discussed range from peasant communities to impoverished landless labourers and reveal a variety of social climates from relative harmony to bitter and bloody conflict.

Finance, Investment and Innovation - Michele Bagella 2018-03-22

This book provides a critical evaluation of the literature on finance, investment and innovation and proposes new research methods for evaluating the comparative performance of financial systems in supporting innovation. The comparative advantage of this book is that of being directly focused on one of the main unsolved issues in monetary and financial economics: the relative effectiveness of national financial systems in supporting innovation. It proposes various theoretical and empirical contributions that, taken together, allow to evaluate the relative effectiveness of some of the most important country systems such as Japan, and the UK and Italy.

A History of Political Economy - Gustav Cohn 1830

Agricultural Economics Literature - United States. Bureau of Agricultural Economics. Library 1940

Poverty, Progress and Development - Paul-Marc Henry 2012-08-06

The studies of poverty, progress and development in this volume, first published in 1991, by a distinguished international roster of authors and researchers, aim to increase knowledge of the social mechanisms of pauperization, marginalization, and the exclusion of certain categories of society; to bring to light the potential and creative role of socio-cultural, intellectual, ethical, moral and spiritual values in progress and the development process; and to examine the links and contradictions between development and progress in order to propose ways of reducing social inequalities.

Gramsci (RLE: Gramsci) - John A. Davis 2014-04-24

Antonio Gramsci used the term 'passive revolution' to describe the limitations and weaknesses of the 19th century bourgeois state in Italy which permitted economic development whilst thwarting social and political progress. This detailed study consists of seven essays each exploring a different theme of the economic and social basis of the Liberal state, providing a broad understanding of the background against the emergence of Italian fascism and present a number of debates and controversies amongst Italian historians. By critical discussion of Gramsci's reading of modern Italian history, the essays present an analysis of the structure and development of social and economic relations in the formation of the Liberal state, illustrating the transition from liberalism to fascism.

Total Science - Jean-Guy Prévost 2009-09-12

In *A Total Science*, Jean-Guy Prévost charts how Italian statistics emerged as a full-fledged discipline, giving rise to a network of university chairs, journals, and other institutions. He focuses on episodes such as the creation of the famous Gini coefficient and the statisticians' participation in Italy's war effort and also analyses the intellectual project to which most statisticians were committed, that of creating a quantitative social science. In doing so he reveals the political and ideological use of the work of statisticians during the Fascist era.

Agrarian Elites and Italian Fascism - Anthony L. Cardoza 2014-07-14

Treating the tumultuous period from 1901 to the late 1920s, this book describes social and political conflict in the cradle of agrarian fascism. Originally published in 1983. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.

Recueil Des Cours, Collected Courses, 1926 - Académie de Droit International de La Haye 1972-12-01

Income and Wealth Distribution, Inequality and Poverty - Camilo Dagum 2012-12-06

This book deals with the following issues: the analysis, estimation and assessment of alternative models of income distribution, the specification and evaluation of income inequality measures the analysis and

measurement of poverty and its rationale, the scope and methodological power of the social accounting matrix (SAM) in the analysis of the functional and personal distribution of income and the family income multiplier, the study of the source and reliability of income distribution data, the decomposition of income inequality measures, the asymptotic distributions and inferential analysis of income inequalities, and an inquiry on the income distribution and income inequality of Eastern European Countries under socialism. New models on income and wealth distribution are specified and their corresponding properties and goodness of fit are discussed. A multivariate approach to the measurement of poverty is developed and applied, and a compact survey of the literature is presented. The book can be used as a text in advanced undergraduate and graduate courses dealing with the theory, model specifications, methods and applications of income and wealth distribution, income inequality and poverty assessment in measurement and the use of SAMs in the analysis of income distribution.

Urban Fuel Poverty - Kristian Fabbri 2019-07-04

Urban Fuel Poverty describes key approaches to defining and alleviating fuel poverty in cities using a multidisciplinary perspective and multiple case studies. It provides empirical knowledge on the levels and intensities of energy poverty in urban areas, along with new theoretical perspectives in conceptualizing the multidimensionality of energy poverty, with special focus given to the urban environment. Chapters discuss what energy poverty is in terms of taxonomy, stakeholders and affected parties, addressing the role of the economy and energy bills, the role of climate and city factors, the role of buildings, and the health and psychological impact on fuel poverty. The book addresses how to measure energy poverty, how to map it, and how to draw conclusions based on illness and social indicators. Finally, it explores measures to 'fight' fuel poverty, including policy and governance actions, building efficiency improvements and city planning. Bridges interdisciplinary divides between policy and economy, cities and buildings, and health and society. Addresses the physical performance of urban fuel poverty and their effect on thermal comfort and human health. Provides strategies and policies to mitigate energy and fuel poverty.

Proceedings - 1931

The Paretian Tradition During the Interwar Period - Mario Pomini 2014-06-05

The years in-between the two World Wars were a crucial period for the building of economic dynamics as an autonomous field. Different competing research programs arose at international level. Great progress was achieved by studies on the business cycle, with the first statistical applications. Outside the theory of the business cycle, a significant line of inquiry was that pursued at the end of the 1930s by Hicks and Samuelson. This period also saw the formulation of another approach to formal economic dynamics which in the 1930s represented the frontier of research from the analytical point of view. It was an approach which set the notion of equilibrium at the basis of dynamics, exactly as in the case of statics, thus leading to the definition of a dynamic equilibrium approach. The aim of this volume is to take into consideration this original research field sparked from Pareto's works and initially developed during the 1920s in the United States by two American mathematicians, G. Evans and C. Ross. In the 1930s, the concept of dynamic equilibrium became the main research field of the Pareto school which gave its most important contributions in this field. The Paretian economists as Amoroso, de Pietri Tonelli, Sensini, and the younger, such as Bordin, Palomba, La Volpe, Fossati and Zaccagnini, for the most part students of the former, developed this approach in many directions. The theory of dynamic equilibrium reached remarkable results from an analytical viewpoint through the wide application of the functional calculus, thus anticipating a perspective which was taken into consideration in the 1960s with the theory of optimal growth. Despite the Pareto school's relevance, it remained widely unknown, not only at international level, but also in Italy. Recently, it has been object of renewed interest. This present work aims at reconstructing the fundamental contributions offered by the Pareto school in forming the economic dynamics theory.

The Service Sector: Productivity and Growth - Ernesto Felli 2012-12-06

The economics of the service sector has recently attracted a large attention. At a macroeconomic level, the discussion has been focused on the issues concerning the relationship between the expansion of the service industry and the potential for a stable and sustained growth. Slow productivity growth, due to the largely non tradable nature of the output, lack of competition due either to regulations or to barriers to entry are

among the "bads" sometimes associated with a "service led" growth. On the other hand new working places are created in the service industries at a rate much higher than in the industrial ones. Is a lower rate of technological change and the continuing of inflationary tensions the price to pay for a sustained expansion of employment in the service sector? These are in a nutshell the questions that led CEIS (Centre for International Studies on Economic Growth - University of Rome "Tor Vergata") to organize the International Seminar on "The Service Sector: Productivity and Growth" held in Rome in May 1993, whose revised proceedings are published in this volume. The economists and academicians invited to the conference have faced the issues mentioned above from different perspectives, but they concentrated especially on the problems relative to growth and productivity.

Crisis of Capitalism - Luciano Vasapollo 2011-10-28

This book provides a comprehensive methodological and philosophical inquiry into, and a comprehensive scientific analysis of, the fundamental economic dynamics of capitalism as a world system.

The Great Dictionary English - Italian - Benjamin Maximilian Eisenhauer 2021-03-19

This dictionary contains around 70,000 English terms with their Italian translations, making it one of the most comprehensive books of its kind. It offers a wide vocabulary from all areas as well as numerous idioms. The terms are translated from English to Italian. If you need translations from Italian to English, then the companion volume The Great Dictionary Italian - English is recommended.

Arthur L Bowley - Andrew I. Dale 2011

Arthur Lyon Bowley, the founding father of modern statistics, was an important and colorful figure and a leader in cementing the foundations of statistical methodology, including survey methodology, and of the applications of statistics to economical and social issues during the late 19th and early 20th centuries. In many respects, he was ahead of his time. The giants in this field around that time were largely concentrated in the British Isles and Scandinavian countries; among these contributors, Arthur Bowley was one of the most active in revolutionizing statistical methodology and its economic applications. However, Bowley has been vastly undervalued by subsequent commentators ? while hundreds of articles and books have been written on Karl Pearson, those on Arthur Bowley amount to a dozen or less. This book seeks to remedy this and fill in an important omission in the monographical literature on the history of statistics. In particular, the recent resurgence of interest in poverty research has led to a renewed interest in Bowley's legacy.

Crises and Cycles in Economic Dictionaries and Encyclopaedias - Daniele Besomi 2013-03

This book aims at investigating from the perspective of the major economic dictionaries the notions of economic crisis and cycle. The project consists in giving an extensive summary of a number of significant entries on this subject, with an introductory essay to each entry placing them (and the dictionary to which they belong) in their context, giving some details on the author of the dictionary entry, and assessing the entry's (and its author's) contribution. The broad picture (including the history of these encyclopedic tools) will be examined in the introductory essays.

Observing Agriculture in Early Twentieth-Century Italy - Federico D'Onofrio 2016-05-20

Agricultural Economists in Early Twentieth-Century Italy describes how Italian agricultural economists collected information about the economy of Italy, between the Giolittian and the Fascist era. The book carefully describes three main forms of economic observation: enquiries, statistics, and farm surveys. For each of these forms of observation, the main participants to the investigation are discussed with their respective agendas, alongside the purposes of the investigation, and its practical constraints. This work introduces the concept of "stakeholder statistics", and stresses the two-way relation between the observer and the observed in the co-production of observational knowledge. Practices of observation developed together with agricultural economics as a discipline and a profession. The study of forms of investigation therefore shed light on the constitution of a coherent and self-conscious group of agricultural economists in Italy, and the scientific and methodological alliances they forged with agricultural economists elsewhere in Europe. Thanks to ambitious research projects, Ghino Valenti in the Giolittian period, and Arrigo Serpieri, after the First World War, led the transformation of Italian agricultural economists from agents of estate owners, to social and economic experts in the service of the Italian state. The group of agricultural

economists who gathered around Serpieri played an important role in supplying the ideology of the agricultural elites with economic content, especially after the First World War, along lines that resemble the development of agrarian ideologies in other countries of Central Europe. This work discusses how observation entered the political debate on agricultural policies of the Fascist regime, namely the so-called Ruralismo.

Statistica economica - 2017

Elementi Di Statistica Italiana Teorica E Pratica - Luigi Guala 1866

Landownership & Power Mod Eur - Martin Blinkhorn 2002-06

First Published in 1991. Routledge is an imprint of Taylor & Francis, an informa company.

A History of Italian Economic Thought - Riccardo Faucci 2014-04-03

This book provides the non-Italian scholar with an extensive picture of the development of Italian economics, from the Sixteenth century to the present. The thread of the narrative is the dialectics between economic theory and political action, where the former attempts to enlighten the latter, but at the same time receives from politics the main stimulus to enlarge its field of reflection. This is particularly clear during the Enlightenment. Inside, this book insists on stressing that Galiani, Verri, and Beccaria were economists quite sensitive to practical issues, but who also were willing to attain generally valid conclusions. In this sense, "pure economics" was never performed in Italy. Even Pareto used economics (and sociology) in order to interpret and possibly steer the course of political action. Within this book it illustrates the Restoration period (1815-48). There was a slowdown of the economists' engagement, due to an adverse political situation, that prompted the economists to prefer less dangerous subjects, such as the relationship between economics, morals, and law (the main interpreter of this attitude was Romagnosi). After 1848, however, in parallel with the Risorgimento cultural climate, a new vision of the economists' task was eventually manifested. Between economics and political Liberalism a sort of alliance was established, whose prophet was F. Ferrara. While the Historical school of economics of German origin played a minor role, Pure Economics (1890-1940 approx.) had a considerable success, as regards both economic equilibrium and the theory of public finance. Consequently, the introduction of Keynes's ideas was rather troubled. Instead, Hayek had an immediate success. This book concludes with a chapter devoted to the intense relationships between economic theories, economic programmes and political action after 1945. Here, the Sraffa debate played an important role in stimulating Italian economists to a reflection on the patterns of Italian economy and the possibilities of transforming Italy's economic and social structure.

Publications on Foreign Countries, an Annotated Accession List - United States. Bureau of the Census 1956

Economics of Innovation: The Case of Food Industry - Giovanni Galizzi 2012-12-06

Giovanni Galizzi and Luciano Venturini The food industry has been characterized by several and profound changes in its structure and competitive environment in the last decades. Although it is not a research-oriented industry, there is no arguing that technological change and particularly product innovations are crucial determinants of firms' performance and In recent years food manufacturers have accelerated the consumers' welfare. development of new products, by using new ingredients, processing and packaging techniques. Thus, food markets are increasingly characterized by competitive environments where relevant flows of innovative products, quality improvements and new technologies provide new consumption trends, food habits, market opportunities and firms' strategies. However, the issue of product innovation in the food industries has been rather neglected by economists. Few works have explicitly addressed this issue. After the pioneering book of Buzzell and Nourse (1967), one can count few contributors. Connor (1981) examined the empirical determinants of new food products introductions. Padberg and Westgren (1979) provided crucial insights about the nature of food innovation through their notions of consumer inertia, technological redundancy and incremental product innovation. Some case-studies provide useful empirical materials, but they are generally sparse.

An Institutional History of Italian Economics in the Interwar Period — Volume I - Massimo M. Augello

2019-11-25

Italy is well known for its prominent economists, as well as for the typical public profile they have constantly revealed. But, when facing an illiberal and totalitarian regime, how closely did Italian economists collaborate with government in shaping its economic and political institutions, or work independently? This edited book completes a gap in the history of Italian economic thought by providing a complete work on the crucial link between economics and the Fascist regime, covering the history of political economy in Italy during the so-called "Ventennio" (1922-1943) with an institutional perspective. The approach is threefold: analysis of the academic and extra-academic scene, where economic science was elaborated and taught,

the connection between economics, society and politics, and, dissemination of scientific debate. Special attention is given to the bias caused by the Fascist regime to economic debate and careers. This Volume I deals with the economics profession under Fascism, in particular in light of the political and institutional changes that the regime introduced, the restructuring of higher education, the restriction of freedom in teaching and of the press, and with respect to promoting its own strategies of political and ideological propaganda. Volume II (available separately) considers the public side of the economics profession, the "fascistisation" of culture and institutions, banishment and emigration of opponents, and post-WW2 purge of Fascist economists.
