Natural Gas: A Commercial Perspective - Andrej Pustišek 2017-03-21

This book discusses and explains the economics of each stage of the natural gas value chain, including the economic impact of restrictions, rules and decisions that are ostensibly technical in nature, as well as commercially relevant contractual stipulations. Each chapter features several real-world examples illustrating the essential points. Natural gas is broadly considered the (leading) conventional source of primary energy. Complementing renewable energies' utilization and offering a highly flexible yet relatively clean fuel, the worldwide natural gas markets are expected to grow. Despite the fact that Europe - where a degree of stagnation in natural gas consumption is being observed and is expected to continue - is not following this trend, international natural gas markets are becoming increasingly interdependent. Therefore, any analysis and discussion of natural gas markets at each level has to have an international rather than national focus.

[Is American Science in Decline?](#) - Yu Xie 2012-06-11

Alarmists argue that the United States urgently needs more and better trained scientists to compete with the rest of the world. Their critics counter that, far from facing a shortage, we are producing a glut of young scientists with poor employment prospects. Both camps have issued reports in recent years that predict the looming decline of American science. Drawing on their extensive analysis of national datasets,

Yu Xie and Alexandra Killewald have welcome news to share: American science is in good health. Is American Science in Decline? does reveal areas of concern, namely scientists' low earnings, the increasing competition they face from Asia, and the declining number of doctorates who secure academic positions. But the authors argue that the values inherent in American culture make the country highly conducive to science for the foreseeable future. They do not see globalization as a threat but rather a potential benefit, since it promotes efficiency in science through knowledge-sharing. In an age when other countries are catching up, American science will inevitably become less dominant, even though it is not in decline relative to its own past. As technology continues to change the American economy, better-educated workers with a range of skills will be in demand. So as a matter of policy, the authors urge that science education not be detached from general education.

Emerging Markets and the Global Economy - Mohamed El Hedi Arouri 2013-12-26

Emerging Markets and the Global Economy investigates analytical techniques suited to emerging market economies, which are typically prone to policy shocks. Despite the large body of emerging market finance literature, their underlying dynamics and interactions with other economies remain challenging and mysterious because standard financial models measure them imprecisely. Describing the linkages between emerging and developed markets, this collection systematically explores several crucial issues in asset valuation and risk management. Contributors present new theoretical constructions and empirical methods for handling cross-country volatility and sudden regime shifts. Usually attractive for investors because of the superior growth they can deliver, emerging markets can have a low correlation with developed markets. This collection advances your knowledge about their inherent characteristics. Foreword by Ali M. Kutan Concentrates on post-crisis roles of emerging markets in the global economy Reports on key theoretical and technical developments in emerging financial markets Forecasts future developments in linkages among developed and emerging economies

Abdul Kalam's mission to eradicate poverty from the world. With 750 million people living in villages, India has the largest rural population in the world. Based on his Indian experience, Dr Kalam recommends a sustainable and inclusive development system called PURA-Providing Urban Amenities in Rural Areas-to uplift the rural poor not by subsidies but through entrepreneurship with community participation. To make his case, Dr Kalam cites the examples of individuals and institutions, in India and from across the world, who, with an entrepreneurial spirit and a burning desire to make a difference, have successfully generated and tapped into the potential of the rural masses. Fabio Luiz de Oliveria Rosa changed the face of the rural district of Palmares, Brazil, by acquiring for the farmers access to electricity and water, which effect, combined with better agricultural methods, led to an increase in prosperity and stemmed the migration to cities. The 123-strong Magar clan owned Magarpatta, a 430-acre plot on the outskirts of Pune, Maharashtra. In the 1990s, they organized and set up the Magarpatta city which is now home to over 35,000 residents and a working population of 65,000 and boasts of an IT park. Economics for Lawyers - Richard A. Ippolito 2005

Whether dealing with contracts, tort actions, or government regulations, lawyers are more likely to be successful if they are conversant in economics. Economics for Lawyers provides the essential tools to understand the economic basis of law. Through rigorous analysis illustrated with simple graphs and a wide range of legal examples, Richard Ippolito focuses on a few key concepts and shows how they play out in numerous applications. There are everyday problems: What is the social cost of legislation enforcing below-market prices, minimum wages, milk regulation, and noncompetitive pricing? Why are matinee movies cheaper than nighttime showings? And then there are broader questions: What is the patent system's role in the market for intellectual property rights? How does one think about externalities like airport noise? Is the free market, a regulated solution, or tort law the best way to deliver the "efficient amount of harm" in the workplace? What is the best approach to the question of economic compensation due to a person falsely imprisoned? Along the way, readers learn what economists mean when they talk about sorting, signaling, reputational assets, lemons markets, moral hazard, and adverse selection. They will learn a new vocabulary and a whole new way of thinking about the world they live in, and will be more productive in their professions.
