How the Dog Became the Dog - Mark Derr 2011-10-27

How the Dog Became the Dog posits that dog was an evolutionary inevitability in the nature of the wolf and its human soul mate. The natural temperament and social structure of humans and wolves are so similar that as soon as they met on the trail they recognized themselves in each other. Both are highly social, accomplished generalists, and creatures of habit capable of adapting? homebodies who like to wander. How the Dog Became the Dog presents domestication of the dog as a biological and cultural process that began in mutual cooperation and has taken a number of radical turns. At the end of the last Ice Age the first dogs emerged with their humans from refuges against the cold. In the eighteenth century, humans began the drive to exercise full control of dog reproduction, life, and death to complete the domestication of the wolf begun so long ago.

Dog Anatomy - Robert Kainer 2002-09-26

Veterinarians, vet techs, dog breeders, trainers, and show judges will greatly benefit from this canine anatomy coloring atlas. Essential anatomic and physiologic concepts are explained and some diseases

common the region being studied are discussed. The title includes 195 black and white line drawings that allow readers to color the drawings of the anatomical structures. This do it yourself form maximizes comprehension and retention. Published by Teton New Media in the USA and distributed by Manson Publishing outside of North America.

Bonding with Your Dog - Victoria Schade 2009-04-01

The human-canine bond: a relationship steeped in love with equal parts mutual respect, trust, and regard In this groundbreaking book, professional dog trainer Victoria Schade reveals that a successful relationship between you and your dog isn't about establishing yourself as the pack leader, but about building a meaningful bond. She explains how this bond forms the core of your entire relationship; if it's lacking, it's the primary source of any frustration you may be having with your dog. First, you'll take a quiz to help you gauge your current relationship with your dog. Next, you'll learn the building blocks for creating a positive, mutually rewarding bond-from granting privileges to being unpredictable to offering ample praise and playtime. You'll discover how a bonded dog: Listens to obedience cues Wants you in her sightlines,

even in intriguing environments Doesn't escape through open doorways Understands and follows your house rules Wants to be close to you and work with you Truly trusts and respects you Whether you share your heart and home with a puppy, an adolescent, or a senior dog, it's never too early or too late to build a bond to last a lifetime-and this book shows you how.

Canine Behavior - Bonnie V. G. Beaver 2009-01-01

Bonnie V. Beaver provides a clear understanding of normal dog behaviors and the necessary tools to identify problem behaviors and their origins. "Canine Behavior" shows how to prevent, eradicate, or minimize unacceptable behaviors and build successful, lifelong relationships with one's dogs.

How Dogs Work - Raymond Coppinger 2019-04-18

Two experts, drawing on decades of research and field experiments, unlock the origins of many of our dogs most common, most puzzling and most endearing behaviors, and explore such canine mysteries as why dogs play, why they bark, how they feed and forage, why they guard and herd and much more.

The Invention of the Modern Dog - Michael Worboys 2018-10-15

Connecting the emergence and development of certain dog breeds to both scientific understandings of race and blood as well as Britain's posture in a global empire, *The Invention of the Modern Dog* demonstrates that studying dog breeding cultures allows historians to better understand the complex social relationships of late-nineteenth-century Britain.

Dog Behaviour, Evolution, and Cognition - Ádám Miklósi 2009

The first book to summarize the burgeoning research literature on the behavioural ecology of the dog. It presents a new ecological approach to the understanding of dog behaviour and highlights directions for future research. Providing links to human and primate behaviour research, it will appeal to anyone interested in behavioural ecology.

Tail Talk - Sophie Collins 2007-08-09

A guide to dog behavior shows how the positions and movements of the ears, eyes, head, mouth and teeth, back, legs, and tail correspond the

mood of the animal.

Dogs - Raymond Coppinger 2008-11-03

Biologists, breeders and trainers, and champion sled dog racers, Raymond and Lorna Coppinger have more than four decades of experience with literally thousands of dogs. Offering a scientifically informed perspective on canines and their relations with humans, the Coppingers take a close look at eight different types of dogshousehold, village, livestock guarding, herding, sled-pulling, pointing, retrieving, and hound. They argue that dogs did not evolve directly from wolves, nor were they trained by early humans; instead they domesticated themselves to exploit a new ecological niche: Mesolithic village dumps. Tracing the evolution of today's breeds from these village dogs, the Coppingers show how characteristic shapes and behaviors from pointing and baying to the sleek shapes of running dogs arise from both genetic heritage and the environments in which pups are raised. For both dogs and humans to get the most out of each other, we need to understand and adapt to the biological needs and dispositions of our canine companions, just as they have to ours.

Canine Play Behavior - Mechtild Käufe 2014-10-01

Is it possible that what looks like play is something else entirely? German author Mechtild Käufer presents findings from scores of researchers worldwide who study why dogs play, the benefits they get from play and how to recognize the "rules" of play that dogs follow to keep their play behaviors fun and safe. There are dozens of color photographs included to help illustrate the actions of dogs at play.

Why Dogs Do That - Tom Davis 2012-07-03

Why do dogs bury bones? Why do dogs turn circles before lying down? Why do dogs chase cars? Or their tails? These and 36 other curious canine behaviors are informatively and lightheartedly answered in the handsomely illustrated *Why Dogs Do That*. An original pencil drawing, rich in detail, illustrates each insightful explanation of odd but characteristic dog actions, social graces and sometimes unseemly deportment.

Between Dog and Wolf - Jessica Addams 2011-11-21

Dogs are dogs and wolves are wolves. Except when they aren't! Most scientists now agree that the dog is a subspecies of wolf *Canis lupus familiaris*. And while most wolves look and act differently from most dogs, it can be very hard to make accurate identifications, especially since wolves and dogs can and do interbreed and certain breeds of dogs look and act a lot like wolves. Having spent years employed at Wolf Park, in Indiana, authors Jessica Addams and Andrew Miller have encountered hundreds of so-called wolves that turned out to be dogs, hybrids that exhibit the characteristics of both wolves and dogs, and even pure wolves that act like dogs. Between Dog and Wolf takes a fascinating look at how wolves and dogs are related, why they can be so hard to tell apart and what rescue organizations need to know when they encounter a canine of unknown origins. You will learn: How and why there are so many misconceptions about wolf behavior. What evolutionary forces turned "good social

The Genius of Dogs - Brian Hare 2013-02-05

The perfect gift for dog lovers and readers of *Inside of a Dog* by Alexandra Horowitz—this New York Times bestseller offers mesmerizing insights into the thoughts and lives of our smartest and most beloved pets. Does your dog feel guilt? Is she pretending she can't hear you? Does she want affection—or just your sandwich? In their New York Times bestselling book *The Genius of Dogs*, husband and wife team Brian Hare and Vanessa Woods lay out landmark discoveries from the Duke Canine Cognition Center and other research facilities around the world to reveal how your dog thinks and how we humans can have even deeper relationships with our best four-legged friends. Breakthroughs in cognitive science have proven dogs have a kind of genius for getting along with people that is unique in the animal kingdom. This dog genius revolution is transforming how we live and work with dogs of all breeds, and what it means for you in your daily life with your canine friend.

Dogs - Mike Loades 2020-12-02

With his signature hands-on style, Mike Loades experiences what it is like to handle various dogs engaged in their traditional tasks. These adventures take him to the Jordanian desert, where he shares the saddle

of his camel with a Saluki and to the green hills of Wales, where he works cattle with a Corgi. He mushes Huskies in Alaska, drives carriages with Dalmatians and flies falcons with Spaniels. Each encounter not only highlights the bond between humans and dogs, it also frames that connection in its historical context. Different types of dogs appear the way they do because, at some stage in their development, they were bred selectively for a specialist job. The author takes key types on a walk through history. Along the way he explores the methods and practices of their original occupations. He delves into when, where and why they were first bred as the types we recognize today. The fascinating and engaging text is supported by over 250 stunning color photographs of dogs in action. It results in an illuminating journey through many cultures and time periods. This book is a personal and heartfelt tribute to the enduring partnership between humans and dogs.

How Dogs Learn - Mary R. Burch 1999-05-04

"...this book should be on every animal trainer's bookshelf for future reference. *How Dogs Learn* covers the content of an undergraduate course in learning and behavior, but the examples are taken from dog training it is practical and very useful without sacrificing scientific and technical accuracy." --Jack Michael, PhD, Department of Psychology, Western Michigan University *How Dogs Learn* explore the fascinating science of operant conditioning, where science and dog training meet. *How Dogs Learn* explains the basic principles of behavior and how they can be used to teach your dog new skills, diagnose problems and eliminate unwanted behaviors. It's for anyone who wants to better understand the learning process in dogs. Every concept is laid out clearly and precisely, and its relevance to your dog and how you train is explained. A Howell Dog Book of Distinction

UNDERSTANDING YOUR DOG - Michael Fox 2015-05-13

Dr. Fox's classic guide to dog psychology and behavior has been reissued. Learn the motivation behind your dog's behavior.

The Long and the Short of It - Jonathan Silvertown 2013-11-01

Everything that lives will die. That's the fundamental fact of life. But not everyone dies at the same age: people vary wildly in their patterns of

aging and their life spans—and that variation is nothing compared to what’s found in other animal and plant species. A giant fungus found in Michigan has been alive since the Ice Age, while a dragonfly lives but four months, a mayfly half an hour. What accounts for these variations—and what can we learn from them that might help us understand, or better manage, our own aging? With *The Long and the Short of It*, biologist and writer Jonathan Silvertown offers readers a witty and fascinating tour through the scientific study of longevity and aging. Dividing his daunting subject by theme—death, life span, aging, heredity, evolution, and more—Silvertown draws on the latest scientific developments to paint a picture of what we know about how life span, senescence, and death vary within and across species. At every turn, he addresses fascinating questions that have far-reaching implications: What causes aging, and what determines the length of an individual life? What changes have caused the average human life span to increase so dramatically—fifteen minutes per hour—in the past two centuries? If evolution favors those who leave the most descendants, why haven’t we evolved to be immortal? The answers to these puzzles and more emerge from close examination of the whole natural history of life span and aging, from fruit flies, nematodes, redwoods, and much more. *The Long and the Short of It* pairs a perpetually fascinating topic with a wholly engaging writer, and the result is a supremely accessible book that will reward curious readers of all ages.

Dog Behavior - James C. Ha 2018-11-29

Dog Behavior: Modern Science and Our Canine Companions provides readers with a better understanding of canine science, including evolutionary concepts, ethograms, brain structures and development, sensory perspectives, the science of emotions, social structure, and the natural history of the species. The book also analyzes relationships between humans and dogs and how the latter has evolved. Readers will find this to be an ideal resource for researchers and students in animal behavior, specifically focusing on dog behavior and human-canine relationships. In addition, veterinarians seeking further information on dog behavior and the social temperament of these companion animals

will find this book to be informative. Provides an accessible, engaging introduction to animal behavior specifically related to human-canine relationships Clarifies misunderstandings, mysteries and misconceptions about canines with historical evidence and scientific studies Offers insights and techniques to improve human-canine relationships

Dogs - Raymond Coppinger 2002-10

A look at the biological needs and dispositions of our canine companions looks at eight different types of dogs and argues that their domestication evolved from dogs who found an ecological niche for themselves in Mesolithic village dumps.

Our Oldest Companions - Pat Shipman 2021-10-19

How did the dog become man’s best friend? A celebrated anthropologist unearths the mysterious origins of the unique partnership that rewrote the history of both species. Dogs and humans have been inseparable for more than 40,000 years. The relationship has proved to be a pivotal development in our evolutionary history. The same is also true for our canine friends; our connection with them has had much to do with their essential nature and survival. How and why did humans and dogs find their futures together, and how have these close companions (literally) shaped each other? Award-winning anthropologist Pat Shipman finds answers in prehistory and the present day. In *Our Oldest Companions*, Shipman untangles the genetic and archaeological evidence of the first dogs. She follows the trail of the wolf-dog, neither prehistoric wolf nor modern dog, whose bones offer tantalizing clues about the earliest stages of domestication. She considers the enigma of the dingo, not quite domesticated yet not entirely wild, who has lived intimately with humans for thousands of years while actively resisting control or training. Shipman tells how scientists are shedding new light on the origins of the unique relationship between our two species, revealing how deep bonds formed between humans and canines as our guardians, playmates, shepherds, and hunters. Along the journey together, dogs have changed physically, behaviorally, and emotionally, as humans too have been transformed. Dogs’ labor dramatically expanded the range of human capability, altering our diets and habitats and contributing to our very

survival. Shipman proves that we cannot understand our own history as a species without recognizing the central role that dogs have played in it.

Dogs - Raymond Coppinger 2001-05-27

Two canine ethnologists probe the nature versus nurture debate in the social order of dogs, tracing the origins of canine intelligence.

Dominance in Dogs - Barry Eaton 2011

You may have read books or seen TV shows that tell you that your dog will seek to dominate you, your family members and other pets unless you become the "alpha" and put him in his place. The theory is that since dogs evolved from wolves and wolves (supposedly) form packs with strict pecking orders and battle each other to become the pack leader, your dog will do the same within your household. In this new US edition, author Barry Eaton separates out the facts from the fiction regarding dominance in pet dogs, presenting the reader with the results of recent research into the behavior of wolves and the impacts of selective breeding on the behavior of dogs. The results may surprise you and will surely inform you.

Meet Your Dog - Kim Brophey 2018-04-17

Every dog owner knows that along with the joy can come the stress and frustration of behavioral problems, which are expensive to diagnose and treat. Enter Kim Brophey, award-winning canine behavior consultant. Using cutting-edge research, Brophey has developed a groundbreaking system that allows owners to identify what their dog is struggling with, why, and how they can fix it. Brophey's approach is unlike anything that has been published before and will give dog owners a new understanding of what motivates and affects their dog's behavior. Brophey's innovative technique rethinks the way we categorize dogs, and distills information from over twenty scientific disciplines into four comprehensive elements: learning, environment, genetics, and self. With revolutionary tips for specific dog breeds, this book will change the life of every dog owner and lead to happier human-canine relationships.

The First Domestication - Raymond Pierotti 2017-11-28

A riveting look at how dog and humans became best friends, and the first history of dog domestication to include insights from indigenous peoples

In this fascinating book, Raymond Pierotti and Brandy Fogg change the narrative about how wolves became dogs and in turn, humanity's best friend. Rather than describe how people mastered and tamed an aggressive, dangerous species, the authors describe coevolution and mutualism. Wolves, particularly ones shunned by their packs, most likely initiated the relationship with Paleolithic humans, forming bonds built on mutually recognized skills and emotional capacity. This interdisciplinary study draws on sources from evolutionary biology as well as tribal and indigenous histories to produce an intelligent, insightful, and often unexpected story of cooperative hunting, wolves protecting camps, and wolf-human companionship. This fascinating assessment is a must-read for anyone interested in human evolution, ecology, animal behavior, anthropology, and the history of canine domestication.

The truth about wolves and dogs - Toni Shelbourne 2012

Dog Works - Vicki Mathison 2000

Why does a Golden Retriever arrange sticks in the form of a pyramid? Why would a Hungarian Vizsla mound up piles of autumn leaves in the shape of a cross? Such canine phenomena have left animal behaviorists baffled for centuries. Are dogs erecting these structures as a result of primeval impulses, or are they responding to otherworldly forces we humans have yet to comprehend? Like Stonehenge and the Pyramids of Giza, some phenomena of man and beast feline aesthetics with WHY CATS PAINT, we couldn't pass up the opportunity to publish the landmark DOG WORKS: THE MEANING AND MAGIC OF CANINE CONSTRUCTIONS. In this enchant and confound us in their enigmatic silence. Having staked out brave new theoretical ground in the field of exhaustively researched, lavishly illustrated study, author Vicki Mathison explores the spiritual yearning that lurks beneath canis familiaris's facade of contentment and obedience. Beautiful, insightful, and intriguing—and certain to send shock waves through universities around the world—DOG WORKS will ensure you'll never look at how a dog buries a bone in the same way again.

Dog Sense - John Bradshaw 2012-05-08

Dogs have been mankind's faithful companions for tens of thousands of years, yet today they are regularly treated as either pack-following wolves or furry humans. The truth is, dogs are neither--and our misunderstanding has put them in serious crisis. What dogs really need is a spokesperson, someone who will assert their specific needs. Renowned anthrozoologist Dr. John Bradshaw has made a career of studying human-animal interactions, and in *Dog Sense* he uses the latest scientific research to show how humans can live in harmony with--not just dominion over-- their four-legged friends. From explaining why positive reinforcement is a more effective (and less damaging) way to control dogs' behavior than punishment to demonstrating the importance of weighing a dog's unique personality against stereotypes about its breed, Bradshaw offers extraordinary insight into the question of how we really ought to treat our dogs.

The Ecology of Stray Dogs - Alan M. Beck 2002

This study of dog ecology and behavior and of human ecology and behavior discusses the facets of the phenomenon of the urban free-roaming dog. It provides information for students who wish to embark on studies of wild canines.

The 100 Silliest Things People Say about Dogs - Alexandra Semyonova 2009

An internationally-acclaimed animal behaviourist debunks 100 myths about dogs and replaces them with the truth about canine nature.

The Story of Edgar Sawtelle - David Wroblewski 2009-03-19

A riveting family saga, *The Story of Edgar Sawtelle* explores the deep and ancient alliance between humans and dogs, and the power of fate through one boy's epic journey into the wild. Born mute, speaking only in sign, Edgar Sawtelle leads an idyllic life with his parents on their farm in remote northern Wisconsin. For generations, the Sawtelles have raised and trained a fictional breed of dog whose thoughtful companionship is epitomized by Almondine, Edgar's lifelong companion. But with the unexpected return of Claude, Edgar's uncle, turmoil consumes the Sawtelle's once-peaceful home. When Edgar's father dies suddenly, Claude insinuates himself into the life of the farm - and into Edgar's

mother's affections. Grief-stricken and bewildered, Edgar tries to prove Claude played a role in his father's death, but his plan backfires, spectacularly. Edgar flees into the vast wilderness lying beyond the farm. He comes of age in the wild, fighting for his survival and that of the three yearling dogs who follow him. But his need to face his father's murderer, and his devotion to the Sawtelle dogs, turn Edgar ever homeward. Wroblewski is a master storyteller, and his breathtaking scenes - the elemental north woods, the sweep of seasons, an iconic American barn, a ghost made of falling rain - create a family saga that is at once a brilliantly inventive retelling of *Hamlet*, an exploration of the limits of language, and a compulsively readable modern classic.

Outwitting Dogs - Terry Ryan 2004-12-01

Training dogs has traditionally been done by using negative reinforcement and brute force (take the choke collar as an example). But the tide is turning, and Terry Ryan, well-known dog trainer, is at the forefront of a revolution. *OUTWITTING DOGS* draws on her twentyfive years of hands-on experience helping people understand and train dogs, and solve dog behavior problems using kinder, gentler methods. *OUTWITTING DOGS* uses more brain than brawn to motivate dog behavior with positive training techniques, and helps readers truly understand the minds of their canine friends (and even enemies). Chapters cover: . outwitting puppies . housebreaking . curing the chronic chewer . how to cure the leash puller, the dog that jumps on people, the dog that hates to be left alone, the dog that won't come, the dog that barks too much, the biter, the aggressor . how to outwit the neighbor's dog . how to teach your dog tricks . how to outwit dog trainers . and even a chapter on outwitting dogs and kids at the same time, and much more. No sensible dog owner will want to be without a copy.

Dog Language - Roger Abrantes 1997

Survival of the Friendliest - Brian Hare 2020

"For most of the approximately 200,000 years that our species has existed, we shared the planet with at least four other types of humans. They were smart, they were strong, and they were inventive.

Neanderthals even had the capacity for spoken language. But, one by one, our hominid relatives went extinct. Why did we thrive? In delightfully conversational prose and based on years of his own original research, Brian Hare, professor in the department of evolutionary anthropology and the Center for Cognitive Neuroscience at Duke University, and his wife Vanessa Woods, a research scientist and award-winning journalist, offer a powerful, elegant new theory called "self-domestication" which suggests that we have succeeded not because we were the smartest or strongest but because we are the friendliest. This explanation flies in the face of conventional wisdom. Since Charles Darwin wrote about "evolutionary fitness," scientists have confused fitness with strength, tactical brilliance, and aggression. But what helped us innovate where other primates did not is our knack for coordinating with and listening to others. We can find common cause and identity with both neighbors and strangers if we see them as "one of us." This ability makes us geniuses at cooperation and innovation and is responsible for all the glories of culture and technology in human history. But this gift for friendliness comes at cost. If we perceive that someone is not "one of us," we are capable of unplugging them from our mental network. Where there would have been empathy and compassion, there is nothing, making us both the most tolerant and the most merciless species on the planet. To counteract the rise of tribalism in all aspects of modern life, Hare and Woods argue, we need to expand our empathy and friendliness to include people who aren't obviously like ourselves. need to expand our empathy and friendliness to include people who aren't obviously like ourselves. Brian Hare's groundbreaking research was developed in close collaboration with Richard Wrangham and Michael Tomasello, giants in the field of cognitive evolution. Survival of the Friendliest explains both our evolutionary success and our potential for cruelty in one stroke and sheds new light onto everything from genocide and structural inequality to art and innovation"--

[And a Dog Called Fig](#) - Helen Humphreys 2022-03-08

And a Dog Called Fig is the story of one writer's life with dogs (including a frisky new puppy), how they are uniquely ideal companions for building

a creative life, and some delightful tales about dogs and their famous writers. Into the writer's isolation comes a dog, to sit beside the chair or to lie on the couch while the writer works, to force them outside for a walk, and suddenly, although still lonely, the writer has a companion. An artist's solitude is a sacred space, one to be guarded from the chaos of the world, where the sparks of inspiration can be kindled into fires of creation. But within this quiet also lie loneliness, self-doubt, the danger of collapsing too far inward. An artist needs a familiar, a companion with emotional intelligence, innate curiosity, an enthusiasm for the world beyond, but also the capacity to rest contentedly for many hours. What an artist needs, Helen Humphreys would say, is a dog. And a Dog Called Fig is a memoir of the writing life told through the dogs Humphreys has lived with and loved over a lifetime, including Fig, her new Vizsla puppy. Interspersed are stories of other writers and their own irreplaceable companions: Virginia Woolf and Grizzle, Gertrude Stein and Basket, Thomas Hardy and Wessex—who walked the dining table at dinner parties, taking whatever he liked—and many more. A love song to the dogs who come into our lives and all that they bring—sorrow, mayhem, reflection, joy—this is a book about steadfast friendship and loss, creativity and craft, and the restorative powers of nature. Every work of art is different; so too is every dog, with distinctive needs and lessons. And if we let them guide us, they will show us many worlds we would otherwise miss. Includes Black-and-White Photographs

What Is a Dog? - Raymond Coppinger 2016-04-19

"An informative, well-written book on the evolution of all canids, including the wild types (wolves, coyotes, jackals, and dingoes)...Recommended."—Choice Of the world's dogs, fewer than two hundred million are pets, living with humans who provide food, shelter, squeaky toys, and fashionable sweaters. But roaming the planet are four times as many dogs who are their own masters—neighborhood dogs, dump dogs, mountain dogs. They are dogs, not companions, and these dogs, like pigeons or squirrels, are highly adapted scavengers who have evolved to fit particular niches in the vicinity of humans. This book present an eye-opening analysis of the evolution and adaptations of these

unleashed dogs and what they can reveal about the species as a whole. Exploring the natural history of these animals, canine behavior experts Raymond and Lorna Coppingers explain how the village dogs of Vietnam, India, Africa, and Mexico are strikingly similar. These feral dogs, argue the Coppingers, are in fact the truly archetypal dogs, nearly uniform in size and shape and incredibly self-sufficient. Drawing on nearly five decades of research, they show how dogs actually domesticated themselves in order to become such efficient scavengers of human refuse. The Coppingers also examine the behavioral characteristics that enable dogs to live successfully and to reproduce, unconstrained by humans, in environments that we ordinarily do not think of as dog friendly. A fascinating exploration of what it actually means, genetically and behaviorally, to be a dog, *What Is a Dog?* is likely to change the way beagle or bulldog owners reflect on their four-legged friends.

The Social Dog - Juliane Kaminski 2014-05-20

Dogs have become the subject of increasing scientific study over the past two decades, chiefly due to their development of specialized social skills, seemingly a result of selection pressures during domestication to help them adapt to the human environment. *The Social Dog: Behaviour and Cognition* includes chapters from leading researchers in the fields of social cognition and behavior, vocalization, evolution, and more, focusing on topics including dog-dog and dog-human interaction, bonding with humans, social behavior and learning, and more. Dogs are being studied in comparative cognitive sciences as well as genetics, ethology, and many more areas. As the number of published studies increases, this book aims to give the reader an overview of the state of the art on dog research, with an emphasis on social behavior and socio-cognitive skills. It represents a valuable resource for students, veterinarians, dog specialists, or anyone who wants deeper knowledge of his or her canine

companion. Reviews the state of the art of research on dog social interactions and cognition Includes topics on dog-dog as well as dog-human interactions Features contributions from leading experts in the field, which examine current studies while highlighting the potential for future research
