The Anxiety Epidemic -

Graham Davey 2018-11-08

Highly commended at the British Medical Association

Book Awards 2019 Are we

living in an age of

unprecedented anxiety, or has

this always been a problem

throughout history? We only

need look around us to see

anxieties: in the family home,

the workplace, on social media,

and especially in the news. It's true that everyone feels anxious at some time in their lives, but we're told we're all feeling more anxious than we've ever been before - and for longer than we've ever done before. It's even reported that anxiety is a modern epidemic significant enough to challenge the dominance of depression as the most common mental health problem. Much of this increase has been attributed to changes in lifestyles that have led to more stress and pressure being placed on people: from childhood, to adolescence, to adulthood. But that's a big claim. Going back over the generations, how anxious were people in 1968 or 1818? Are people just anxious all the time - regardless of what they do or when they lived? Is anxiety an inevitable consequence of simply being alive? Graham Davey addresses many important questions about the role of anxiety. What is it good for? What are the unique modern-day causes of our anxieties and stresses? What

turns normal everyday anxiety into the disabling disorders that many of us experience - distressing and debilitating conditions such as phobias, social anxiety, panic disorder, obsessive compulsive disorder, pathological worrying and post-traumatic stress disorder? To truly conquer anxiety, we need to understand why it has established its prominent place in our modern world.

boy... even by omission. Travis Miller has a pretty solid life in the small California beach town he calls home. He's working his way up in the district attorney's office, he owns a home with an ocean view, and he has close ties with his family. Life is good. If only he could find a sweet boy to call his own, life would be... perfect. Adam Nichols' life has never been easy. Growing up in foster care taught him to be strong, so finding himself in a violent relationship was a shock. Now that he's finally free of it, he faces new problems. He's jobless, homeless, and terrified of starting from scratch. With a little help from an old friend, Adam discovers a whole new world. He goes from rock bottom to renting a room from a hot assistant DA and working at Daddy's Lap, a kink club that opens his vanilla eyes to things he'd never imagined. His new roommate is a balm to Adam's damaged soul. The tender way Travis cares for him is almost like the Daddy kink community he's seen at the club. But

Travis isn't a Daddy... right? If he were, surely he'd have said so. What happens when a lie by omission threatens to bring their budding relationship tumbling down around them? Will Travis ever be able to earn Adam's trust again? This is the first book in a new series about not-so-perfect Daddies, adorable "boys," and one sassy brat with an insane list of rules. Grab your fan and tissues because this series comes with both a high heat advisory and all the squishy feels you'd want from a Susan Hawke book. Possible trigger for references to domestic violence.

Ecological Learning Theory -

Graham Davey 2018-02-19
Originally published in 1989, this title presents a view of adaptive behaviour which integrates both evolutionary and psychological perspectives on learning. The study of learning, and in particular conditioning, had evolved in isolation from the rest of the biological sciences, and until the late 1980s had largely

ignored the fact that learning processes are adaptive functions subject to the pressures of evolutionary selection. This text is designed to give a thorough insight into contemporary views of learning mechanisms, at the same time incorporating an evolutionary perspective on the function and performance of learning.

Graham Davey gives a detailed introduction to evolutionary approaches to behaviour and basic learning phenomena such as Pavlovian and instrumental conditioning. He also provides a comparative introduction to both learning and performance aspects of conditioning. He covers ecological approaches to adaptive behaviour (e.g. foraging theory), specialized learning processes such as concept formation, spatial learning, and language learning. Innovative in its integration of ecological and evolutionary approaches with more traditional associative views of learning, the book introduces the reader to learning in a very wide variety of species other than the

traditional laboratory rat and pigeon. It will be valuable to anyone with a general interest in animal behaviour, and also to those with a specific interest in learning, adaptive behaviour, and evolutionary approaches to behaviour.

Given Half a Chance - Edward Davey 2019-04-18

Given Half a Chance is both a snapshot of our world and a call to arms, setting out the most pressing environmental challenges that we face while making a passionate case for why we need to meet them. People are acting with hope and courage, against all the odds, to make things better. The challenge before us is to go to scale and to

replicate these successful approaches elsewhere, fast: this book draws on firsthand experience and interviews with many of the world's leading experts to show how.

The Good Fight - Liane Davey
2019-03-26

More productivity. Less drama.

It all starts with a healthy conflict culture. In the modern workplace, conflict has become a dirty word. After all, conflict is antithetical to teamwork, employee engagement, and a positive company culture. Or is it? The truth is that our teams and organizations require conflict to get things done. But we avoid conflict and build up conflict debt by deferring and dodging the difficult decisions. Our organizations are paying the price - being less productive, less innovative, and less competitive. Individuals are paying, too - suffering from overwhelming workloads, endless drama, and sleepless nights. In *The Good Fight*, Lane Davey shows you how to create the productive conflict your organization needs to get along and get stuff done. Drawing on
