"A member of the International Code Family"--Cover.

International Building Code 2018 - International Code Council 2017

This code applies to all buildings except detached one- and two-family dwellings and townhouses up to three stories. The 2018 IBC contains many important changes such as: Accessory storage spaces of any size are now permitted to be classified as part of the occupancy to which they are accessory. New code sections have been introduced addressing medical gas systems and higher education laboratories. Use of fire walls to create separate buildings is now limited to only the determination of permissible types of construction based on allowable building area and height. Where an elevator hoistway door opens into a fire-resistance-rated corridor, the opening must be protected in a manner to address smoke intrusion into the hoistway. The occupant load factor for business uses has been revised to one occupant per 150 square feet. Live loads on decks and balconies increase the deck live load to one and one-half times the live load of the area served. The minimum lateral load that fire walls are required to resist is five pounds per square foot. Wind speed maps updated, including maps for the state of Hawaii. Terminology describing wind speeds has changed again with ultimate design wind speeds now called basic design wind speeds. Site soil coefficients now correspond to the newest generation of ground motion attenuation equations (seismic values). Five-foot tall wood trusses requiring permanent bracing must have a periodic special inspection to verify that the required bracing has been installed. New alternative fastener schedule for construction of mechanically laminated decking is added giving equivalent power-driven

fasteners for the 20-penny nail. Solid sawn lumber header and girder spans for the exterior bearing walls reduce span lengths to allow #2 Southern Pine design values.

Post-Tensioned Buildings - Bijan O. Aalami 2014-03-01

For practicing engineers, students, contractors, building officials, plan checkers, and researchers. Drawing upon thirty-two years of world wide experience, topics in post-tensioning are covered in-depth and taken to the point of practical application. ? Covers US and European Codes for Post-Tensioning Design ? Unbonded and Bonded (Grouted) Systems ? Construction Technology and Design Procedures ? Post-Tensioned Floor Design ? Step-by-Step calculation ? Post-Tensioned Beam Design ? Step-by-Step Calculation ? Software and Design Tools; Design Flow Charts and Examples ? Stress Losses; Deflections; Cracking and Crack Width ? Application of Finite Elements to Design ? Application of Building Information Modeling (BIM) to Post-Tensioning The book assumes a basic knowledge of conventionally reinforced concrete design. Founded on this knowledge, the material presented covers the full range of post-tensioning principles, including the know-how necessary for expedient and efficient designs. The focus of the book is on the science of engineering, while covering in detail the ?art? of post-tensioning practice. Emphasis is on the primary objectives of design for ?serviceability? and ?safety,? and how to achieve them, while describing the diversity in local or traditional practice. The material is organized to benefit a wide audience of designers, as well as plan checkers and reviewers, in particular to facilitate the process of project approval. The book comes in two versions: a US Edition, and an International Edition. The US Edition uses the US system of units (lb, in) that is common in US construction, along with the equivalent values in SI units (N, mm). It covers both ACI/IBC and EC2, which in addition to being mandatory in a large number of European countries is being used more and more as a basis for other building codes. The International Edition of the book covers the same topics according to both ACI/IBC and EC2, in the SI (N, mm) system of units. In addition, where applicable, it includes the recommendations of TR43, a publication of the UK Concrete Society that provides recommendations for design and construction of post-tensioned buildings www.PT-Structures.com www.adaptsoft.com
