[The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition](#) - American Psychiatric Association 2015-07-29

Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice

guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process,

recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors;

assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

The Psychology of Extreme Violence - Clare S. Allely 2020-05-18

abnormalities in homicide offenders. Featuring several contemporary real-world case studies, this book offers insight into the psychology of serial homicide offenders, mass shooters, school shooters and lone-actor terrorists. The main purpose of this book is not to glorify or condemn the actions of these individuals, but to attempt to explain the motivations and circumstances that inspire such acts of extreme violence. By adopting a detailed case study approach, it aims to increase our understanding of the specific motivations and psychological factors underlying extreme violence. Using nontechnical language, this book is the ideal companion for students, researchers, and forensic practitioners interested in the multidisciplinary nature of extreme violence. Violence and Health Care Professionals - Til

Wykes 2013-11-11

Til Wykes BACKGROUND The recent publication of several surveys on violence was the impetus for this book. The first was carried out in 1986 by the Health and Safety Commission Health Services Advisory Committee (1987). They conducted a comprehensive survey of the incidence of violence to 5000 workers in five separate health districts. The results from the 3000 people who eventually replied made many in the caring professions worried. One in 200 workers had suffered a major injury following a violent attack during the previous year and a further one in ten needed first aid following an assault. Other surveys also showed high risks: of social service staff, 6% had suffered an attack in the past 5 years (Saunders, 1987), and social workers were at even higher risk. 29% had been assaulted in the last 3 years (Rowett, 1986). In addition, 4% of general practitioners had experienced an attack resulting in injury in the

past year (D'Urso and Hobbs, 1989). Clinical psychologists were also at risk - 53% had been assaulted at least once during their professional career and 18% in the past year (Perkins, 1991). Media reports of extreme violence seem to be the tip of the iceberg. Many staff are attacked and some of these attacks have serious physical or psychological consequences that interfere with the victim's ability to return to their full working capacity. This loss of highly trained staff should be recognized by employers and the community.

Gefährdung durch psychisch auffällige

Personen - Christian Schwarzenegger

2022-10-20

Der Umgang mit als Gefährder*innen eingestuften, psychisch auffälligen Personen ist eine grosse Herausforderung. Oft stehen strafrechtlich kaum fassbare, aber dennoch bedrohliche Verhaltensweisen im Raum, die begründeten Anlass für die Befürchtung einer bevorstehenden Gewalttat geben. Polizeiliche und strafprozessuale Massnahmen stossen an ihre Grenzen. Es fehlen ausreichende Instrumente mit dem notwendigen Therapieansatz. Um diese Versorgungslücken zu schliessen, ist das Bedrohungsmanagement in der Kette der Strafverfolgung sowie im Gesundheitswesen noch besser zu verankern. Die „Fachtagung Bedrohungsmanagement - Gefährdung durch psychisch auffällige Personen“ vom 4. November 2021 sollte zur

Information und Wissensvermittlung sowie zur Vernetzung unter Fachpersonen dienen.

Violence in Psychiatry - Katherine D. Warburton

2016-04-28

The association between violence and mental illness is well studied, yet remains highly controversial. Currently, there does appear to be a trend of increasing violence in hospital settings, including both civilly and forensically committed populations. In fact, physical aggression is the primary reason for admission to many hospitals. Given that violence is now often both a reason for admission and a barrier to discharge, there is a pressing need for violence to be re-conceptualized as a primary medical condition, not as the by-product of one. Furthermore, treatment settings need to be enhanced to address the new types of violence exhibited in inpatient environments and this modification needs to be geared toward balancing safety with treatment. This book focuses on violence from assessment, through

underlying neurobiology, to treatment and other recommendations for practice. This will be of interest to forensic psychiatrists, general adult psychiatrists, psychiatric residents, psychologists, psychiatric social workers and rehabilitation therapists.

In terms of safety, although most programmes contact the (ex-) partner at the beginning of the treatment, still half of the programmes do not contact the (ex-) partner during the treatment or at the end of it, moreover nearly half of the programmes do not use any risk assessment instrument. Outcome is measured by most of the programmes however partner and official reports should also be included. Finally, those results are compared and discussed in light of the European context.

Long-Term Forensic Psychiatric Care - Birgit Völlm 2019-05-16

This book provides an overview of forensic psychiatry, focusing on the provision of care in Europe as well as the legal and ethical challenges posed by long-term stays in forensic settings. Forensic psychiatric services provide care and treatment for mentally disordered offenders (MDOs) in secure in-patient facilities as well as in the community. These services are high-cost/low-volume services; they pose significant restrictions on patients and hence

raise considerable ethical challenges. There is no agreed-upon standard for length of stay (LoS) in secure settings and patients' detention periods vary considerably across countries and even within the same jurisdiction. Thus far, little research has been conducted to identify factors associated with length of stay; consequently, it remains unclear how services should be configured to meet the needs of this patient group. This volume fills some of those gaps. Furthermore, it presents new research on factors associated with length of stay, both patient-related and organisational. Various approaches to the provision of care for long-term patients in different countries are explored, including a few best practise examples in this specific area of psychiatry. The book also addresses the perspective of those working in forensic care by reviewing quality-of-life research and interviews with patients. The authors of this volume come from a range of professional backgrounds, ensuring a certain

breadth and depth in the topic discussion, and even includes patients themselves as (co-)authors.

American Psychiatric Association Practice Guidelines - American Psychiatric Association 1996

The aim of the American Psychiatric Association Practice Guideline series is to improve patient care. Guidelines provide a comprehensive synthesis of all available information relevant to the clinical topic. Practice guidelines can be vehicles for educating psychiatrists, other medical and mental health professionals, and the general public about appropriate and inappropriate treatments. The series also will identify those areas in which critical information is lacking and in which research could be expected to improve clinical decisions. The Practice Guidelines are also designed to help those charged with overseeing the utilization and reimbursement of psychiatric services to develop more scientifically based and clinically

sensitive criteria.

The Psychiatric Uses of Seclusion and Restraint - Kenneth Tardiff 1984

Aggression and Violence - Brodie Paterson
1999-11-11

Aggression and violence directed towards staff in the caring services is a growing problem, and one that is receiving increasing attention. Despite the interest and concern, few successful approaches to the subject have been devised, leaving the majority of staff feeling vulnerable.

This book addresses the issue of violence from a theoretical, organisational, legal and practice perspective in order to provide a framework for future practice in this area. Particular attention is paid to the provision of support for victims.

Violence - Royal College of Nursing (Great Britain) 2005

The National Institute for Health and Clinical Excellence (NICE) commissioned the National Collaborating Centre for Nursing and Supportive Care (NCC-NSC) to develop guidelines on the short-term management of disturbed/violent behaviour in adult psychiatric in-patient settings and emergency departments for mental health assessments. This follows referral of the topic by the Department of Health and Welsh Assembly Government. This document describes the methods for developing the guidelines and presents the resulting recommendations. It is the source document for the NICE short-form version, the Quick reference guide (the abridged version for health professionals) and the

Information for the public (the version for patients and their carers), which will be published by NICE and be available on the NICE website (www.nice.org.uk). The guidelines were produced by a multidisciplinary Guideline Development Group (GDG) and the development process was undertaken by the NCC-NSC. The main areas examined by the guideline were: environment and alarm systems, prediction (antecedents, warning signs and risk assessment), training, working with service users, de-escalation techniques, observation, physical interventions, seclusion, rapid tranquillisation, post-incident review, emergency departments, and searching.

The Fifteen Minute Hour - Marian R. Stuart 2008

By incorporating therapeutic talk into daily practice, family doctors can solve and often prevent many psychological and behavioural

problems. The approaches described in this text are designed not only to enhance the therapeutic relationship, but also to make practice more productive and pleasurable. In particular, they can be applied in the context of a standard length consultation, rather than lengthy therapy sessions. Developed over two decades and four editions, the overwhelming consensus is that the strategies described in this book work: patients respond, practitioners save time, and provider-patient relationships become richer. The techniques will certainly increase readers' abilities to recognize and treat common emotional problems. The approach is pragmatic, flexible and easily learned, and it works! The fact that this book has progressed to a fourth edition confirms the usefulness of these techniques to those of us in primary care. Although the basic concepts presented are similar to earlier editions, much new material has been added to make these principles and techniques more useful to the primary care

health professional. This book is a valuable resource for primary care physicians and all health professionals involved in providing primary care to patients. It contains many simple and practical techniques that are useful in practice' - Robert E Rakel MD in the Foreword.

International Perspectives on Violence Risk Assessment - Jay P. Singh 2016

With the world's prison population continuing to grow and the number of secure inpatient beds in psychiatric hospitals on the rise, establishing valid and reliable methods of identifying individuals who will commit violent acts is an important global health and public safety issue. One approach to identifying future offenders is through the use of risk assessment--unstructured and structured methods of predicting the likelihood of antisocial behavior. Although much has been written on the performance of risk assessment in research settings, little is known about current standards of practice and relevant

public policy across the globe. *International Perspectives on Violence Risk Assessment* includes chapters by leading risk assessment scholars in more than 15 countries and explores the topic from a truly international outlook. Using findings from the seminal *International Risk Survey (IRiS)*, the largest qualitative study in the history of the field, current assessment, management, and monitoring practices on six continents are explored. Authors identify and describe the most commonly used risk assessment tools, examine risk communication preferences, and provide recommendations for mental health practitioners, criminal justice professionals, and legal professionals. Finally, authors review the seminal research studies, current practice guidelines, and relevant legal statutes of their jurisdictions. This volume serves as an invaluable resource for researchers, practitioners, and policymakers interested in this rapidly evolving field.
