*The Optickal Illusion* - Rachel Halliburton 2018-06-05

In this vividly fashioned debut, Rachel Halliburton draws from the sordid details of a genuine scandal that deceived the British Royal Academy to deliver a stirring tale on the elusive goal of achieving artistic renown. It is 1797 and in Georgian London, nothing is certain anymore: the future of the monarchy is in question, the city is aflame with conspiracies, and the French could invade any day. Amidst this feverish atmosphere, the American painter Benjamin West is visited by a dubious duo comprised of a blundering father and vibrant daughter, the Provises, who claim they have a secret that has obsessed painters for centuries: the Venetian techniques of master painter Titian. West was once the most celebrated painter in London, but he hasn't produced anything of note in years, so against his better judgment he agrees to let the intriguing Ann Jemima Provis visit his studio and demonstrate the techniques from the document. What unravels reveals more than West has ever understood—about himself, the treachery of the art world, and the seductive promise of greatness. Rich in period detail of a meticulously crafted Georgian society, *The Optickal Illusion* demonstrates the lengths women must go to make their mark on a society that seeks to underplay their abilities.

In the Beginning - Michael Lienesch 2007-04-23

The current controversy over teaching evolution in the public schools has grabbed front-page headlines and topped news broadcasts all across the United States. In *In the Beginning* investigates the movement that has ignited debate in state legislatures and at school board meetings. Reaching back to the origins of antievolutionism in the 1920s, and continuing to the promotion of intelligent design today, Michael Lienesch skillfully analyzes one of the most formidable political movements of the twentieth century. Applying extensive original sources and social movement theory, Lienesch begins with fundamentalism, describing how early twentieth-century fundamentalists worked to form a collective identity, to develop their own institutions, and to turn evolution from an idea into an issue. He traces the emerging antievolution movement

through the 1920s, examining debates over Darwinism that took place on college campuses and in state legislatures throughout the country. With fresh insights and analysis, Lienesch retells the story of the 1925 Scopes "monkey" trial and reinterprets its meaning. In tracking the movement from that time to today, he explores the rise of creation science in the 1960s, the alliance with the New Christian Right in the 1980s, and the development of the theory of intelligent design in our own time. He concludes by speculating on its place in the politics of the twenty-first century. *In the Beginning* is essential for understanding the past, present, and future debates over the teaching of evolution.

*Petroleum Engineer's Guide to Oil Field Chemicals and Fluids* - Johannes Fink 2021-03-14

*Petroleum Engineer's Guide to Oil Field Chemicals and Fluids*, Third Edition delivers all the necessary lists of chemicals by use, their basic components, benefits and environmental implications. Instead of searching through various sources, this updated reference presents a one-stop, non-commercialized approach by organizing products by function, matching the chemical to the process for practical problem-solving, and extending coverage with additional resources and supportive materials. Updates include shale specific fluids and organic additives, including swellable polymers and multi-walled carbon nanotubes. Covering the full spectrum, including fluid loss additives and oil spill treating agents, this book is ideal for every oil and gas operation with its options for lower costs, sustainable use and enhanced production. Helps readers effectively locate and utilize the right chemical application specific to their oil and gas operation Includes updated sections on shale specific fluids, defoamers and organic additives, including biodegradable waste and swellable polymers Covers environmental factors and risks for oil field chemicals, along with the pluses and minuses of each application

Formation Testing - Wilson C. Chin 2019-03-14

This third volume in the "Formation Testing" series further develops new methods and processes that are being developed in the oil and gas industry. In the 1990s through 2000s, the author co-developed Halliburton's commercially successful GeoTap™ real-time LWD/MWD method for formation testing, and also a parallel method used by China Oilfield Services, which enabled the use of data taken at early times, in low mobility and large flowline volume environments, to support the important estimation of mobility, compressibility and pore pressure, which are necessary for flow economics and fluid contact boundaries analyses (this work was later extended through two Department of Energy Small Business Innovation Research awards). While extremely significant, the effect of high pressures in the borehole could not be fully accounted for – the formation tester measures a combination of reservoir and mud pressure and cannot ascertain how much is attributed to unimportant borehole effects. The usual approach is "simply wait" until the effects dissipate, which may require hours – which imply high drilling and logging costs, plus increased risks in safety and tool loss. The author has now modeled this "supercharge" effect and developed a powerful mathematical algorithm that fully accounts to mud interactions. In short, accurate predictions for mobility, compressibility and pore pressure can

now be undertaken immediately after an interval is drilled without waiting. This groundbreaking new work is a must-have for any petroleum, reservoir, or mud engineer working in the industry, solving day-to-day problems that he or she encounters in the field.

**The Forgotten Adventures of Richard Halliburton** - R. Scott Williams 2011-04-01

A biography of the charismatic world traveler whose daredevil exploits thrilled millions in the early twentieth century. Born in 1900, Richard Halliburton ran away from his hometown of Memphis, Tennessee, at the age of nineteen to lead an extraordinary and dramatic life of adventure. Against the backdrop of the Roaring Twenties and the Great Depression, Halliburton's exploits around the globe made him an internationally known celebrity and the most famous travel writer of his time. From climbing Mount Olympus in Greece to swimming the Panama Canal and flying all the way to Timbuktu, Halliburton experienced and wrote about adventures that others never even believed possible. His youthful spirit and bohemian lifestyle won the hearts of millions, and this absorbing biography tells his story. "He was Marco Polo and Indiana Jones wrapped up in one, with P.T. Barnum's flippancy and James Bond's bravado, capped off by F. Scott Fitzgerald's aristocratic good looks and manners." —Smithsonian "A concise new biography [that] covers the life of a man of marvels." —Memphis Magazine

Accelerating global change is generating a volatile, shifting and potent array of risks and threats for business and corporate management. If business is to survive and recover, the authors argue that a major shift is needed that embraces corporate culture, operational planning and the key role of communication in the information revolution. This innovative text meets this challenge head on. It includes informed insights into the implications for strategic planning, management and communications handling for companies facing serious issues and crisis situations in tomorrow's corporate world. With a wide-ranging review of the information and communications revolution, and a forecast of future parameters for planning and execution of crisis management, this book will be invaluable reading for all those involved in the strategic management of technology and corporate communications.
