Three Things About Elsie - Joanna Cannon 2019-07-02

The bestselling author of *The Trouble with Goats and Sheep* delivers a suspenseful and emotionally satisfying novel “infused with warmth and humor” (People) about a lifelong friendship, a devastating secret, and the small acts of kindness that bring people together. There are three things you should know about Elsie. The first thing is that she’s my best friend. The second is that she always knows what to say to make me feel better. And the third thing...might take a bit more explaining. Eighty-four-year-old Florence has fallen in her flat at Cherry Tree Home for the Elderly. As she waits to be rescued, she thinks about her friend Elsie and wonders if a terrible secret from their past is about to come to light. If the charming new resident is who he claims to be, why does he look exactly like a man who died sixty years ago? From the acclaimed, bestselling author of *The Trouble with Goats and Sheep*, *Three Things About Elsie* “breathes with suspense, providing along the way piercing, poetic descriptions, countless tiny mysteries, and breathtaking little reveals...a rich portrait of old age and friendship stretched over a fascinating frame” (Kirkus Reviews, starred review). This is an “amusing and heartbreaking” (Publishers Weekly) story about forever friends on the twisting path of life who come to understand how the fine threads of

humanity connect us all.

Advancing Electoral Integrity - Pippa Norris 2014-04-10

Recent decades have seen growing concern about problems of electoral integrity. The most overt malpractices used by rulers include imprisoning dissidents, harassing adversaries, coercing voters, vote-rigging counts, and even blatant disregard for the popular vote. Serious violations of human rights, undermining electoral credibility, are widely condemned by domestic observers and the international community. Recent protests about integrity have mobilized in countries as diverse as Russia, Mexico, and Egypt. Elsewhere minor irregularities are common, exemplified by inaccurate voter registers, maladministration of polling facilities, lack of security in absentee ballots, pro-government media bias, ballot miscounts, and gerrymandering. Long-standing democracies are far from immune to these ills; past problems include the notorious hanging chads in Florida in 2000 and more recent accusations of voter fraud and voter suppression during the Obama-Romney contest. In response to these developments, there have been growing attempts to analyze flaws in electoral integrity using systematic data from cross-national time-series, forensic analysis, field experiments, case studies, and new instruments monitoring mass and elite perceptions of malpractices. This volume collects essays from international experts who evaluate the robustness, conceptual validity, and reliability of the growing body of evidence. The essays compare alternative approaches and apply these methods to evaluate the quality of elections in several areas, including in the United States, Sub-Saharan Africa, and Latin America.

Are South Africans Free? - Lawrence Hamilton 2014-04-10

This book is available as open access through the Bloomsbury Open

Access programme and is available on www.bloomsburycollections.com. Despite South Africa's successful transition to democracy and lauded constitution, political freedom for the majority of South Africans remains elusive. The poor and unemployed majority are poorly represented and lack power and thus freedom. Under these conditions, the freedom of the privileged minority is also seriously impaired due to the costs of maintaining their relative security and well-being. Lawrence Hamilton is an internationally-known political theorist, who has spent ten years teaching in South African universities. In this unique book he brings ideas - political and philosophical - to the fore to understand a contemporary political conundrum. He outlines the persistent, unresolved problems characterizing contemporary South Africa: poverty and quality of life statistics that are appalling for a middle-income country, levels of inequality that make South Africa one of the most unequal places in the world, skewed economic and political representation that reproduces elites rather than generating opportunities for all and an electoral system that implements the idea of proportional representation so literally that it undermines meaningful representation. *Are South Africans Free?* aims not only to explain the current state of South Africa but to provide positive new directions and suggestions for institutional change. Hamilton argues that freedom as power in South Africa does not depend on good will, charity or duty, and it goes beyond the complete realization of the political and civil liberties currently safeguarded in its constitution. Such change will depend on courageous leadership, active citizenship, new forms of representation and a macroeconomic policy that offers radical redistribution of actual and potential wealth.

Combating Corruption - Yogesh Atal 2014

Creating Corporate Reputations : Identity, Image and Performance - Grahame Dowling 2000-12-07

Recent research in business strategy suggests that corporate reputations are a valuable strategic asset for every company. Good reputations have been shown to help firms attain and sustain superior financial

performance in their industry. This book outlines how high-status companies become corporate super brands, and it present managers with a framework to proactively enhance their corporation's desired reputation. While many books concentrate on advertising or corporate identity as the primary tools for reputation enhancement, this book provides a more expansive and realistic picture of what it takes to build a corporate super brand. One of its key contributions is that it emphasizes the roles of customer value and organizational culture in the reputation-building process and exposes the limitations of corporate advertising, sponsorships, and minor corporate identity change. Drawing on more than fifteen years of academic research, executive seminars, and consulting experience, Grahame Dowling suggests ways to improve the corporate reputations that different groups of stakeholders hold of your company. He also describes how to avoid many of the traps that catch unwary managers who try to improve their company's desired reputation.

Human Rights in Changing Times - G. P. Agarwal 2014-06-12

This book is an outcome of a two-day international conference convened to discuss the changing notion of human rights from different perspectives. While focusing on the increasing relevance of human rights in an era of globalization, the book analyses the various legal-political, socio-economic, gender, ecological and international dimensions of this issue. From the large number of papers presented at the conference, sixteen articles have been selected for this volume. These are presented in four parts: namely, politico-legal, socio-economic, ecological and gender, and the transnational. The introductory section presents the major issues and concerns highlighted by the editors and carries the keynote address by Professor Yogesh Atal. Written by both young and veteran social scientists, the book presents a unique combination of

theoretical and practical studies of human rights in comparative perspectives. The book will attract readership from the academe, human rights activists, and the concerned citizenry, and will be useful to students of law, political science, public administration, and sociology.

Structural Functions of Harmony - Arnold Schoenberg 1969

This book is Schoenberg's last completed theoretical work and represents his final thoughts on the subject of classical and romantic harmony. The earlier chapters recapitulate in condensed form the principles laid down in his 'Theory of Harmony'; the later chapters break entirely new ground, for they analyze the system of key relationships within the structure of whole movements and affirm the principle of 'monotonicity,' showing how all modulations within a movement are

merely deviations from, and not negations of, its main tonality.

Montreal's Expo 67 - Bill Cotter 2020-02-03

In 1967, Canada celebrated the 100th anniversary of its founding with a spectacular party, and the whole world was invited. Montreal's Expo 67 was the first world's fair held in Canada, and it was a huge success, attracting over 50 million visitors. The 1,000-acre site was built on two man-made islands in the St. Lawrence River and incorporated 90 futuristic pavilions created by some of the world's greatest architects and designers. Over 60 countries were represented, along with many private, corporate and thematic pavilions, all brought together under the theme "Man and his World." With performers and entertainers of all varieties, restaurants, cultural attractions, exhibitions and a world-class amusement park, Expo 67 was literally the party of the century, exceeding all expectations.

Radioactive Aerosols - Constantin Papastefanou 2011-07-28

Whenever radioactivity is released to the atmosphere, for example by the detonation of nuclear weapons or the testing of nuclear weapons or from nuclear reactor accidents that fraction of it which remains airborne for more than a few hours is liable to be attached to aerosol particles. The resulting radioactive aerosols are carried by atmospheric mixing processes until they settle out or are scavenged by precipitation. The radiation exposure pathway of maximum concern to humans is by inhalation of aerosols and their deposition in the respiratory tract. In this context, it is important to note that radioactive aerosols are commonly of natural origin also. In particular, the associated radionuclides can be of natural terrestrial origin, such as the decay products of radon gas, or

they can be cosmogenic, such as beryllium-7. The exposure of miners of uranium and other ores and minerals to radon and its aerosol-borne decay products is of major significance. The book describes the formation of aerosols, their aerodynamic size distribution, their atmospheric residence time, their sampling and measurement, the range of radioactive aerosols found and studied thus far, including man-made nuclides and radon decay products and their interaction with man, including deposition in the lung and subsequent health effects. Advanced level science handbook for researchers, scientists and academics Covers all aspects of radiation exposure in humans, including subsequent health implications Presents the latest findings and analysis in this highly topical area

TransArea - Ottmar Ette 2016-07-11

Ottmar Ette's TransArea proceeds from the thesis that globalization is not a recent phenomenon, but rather, a process of long duration that may be divided into four main phases of accelerated globalization. These phases connect our present, across the world's widely divergent modern eras, to the period of early modern history. Ette demonstrates how the literatures of the world make possible a tangible perception of that which constitutes Life, both of our planet and on our planet, which may only be understood through the application of multiple logics. There is no substitute for the knowledge of literature: it is the knowledge of life, from life. This English translation will be of great interest to English-speaking scholars in the fields of Global and Area Studies, Literary Studies, Cultural Studies, History, Political Science, and many more. About the author Ottmar Ette has been Chair of Romance Literature at the University of Potsdam, Germany, since 1995. He is Honorary Member of the Modern Language Association of America (MLA) (elected in 2014), member of the Berlin-Brandenburg Academy of Sciences and Humanities (elected in 2013), and regular member of the Academia Europaea (since 2010).

Science as Practice and Culture - Andrew Pickering 2010-11-15

Science as Practice and Culture explores one of the newest and most controversial developments within the rapidly changing field of science studies: the move toward studying scientific practice—the work of doing science—and the associated move toward studying scientific culture, understood as the field of resources that practice operates in and on. Andrew Pickering has invited leading historians, philosophers, sociologists, and anthropologists of science to prepare original essays for this volume. The essays range over the physical and biological sciences and mathematics, and are divided into two parts. In part I, the contributors map out a coherent set of perspectives on scientific practice and culture, and relate their analyses to central topics in the philosophy of science such as realism, relativism, and incommensurability. The essays in part II seek to delineate the study of science as practice in arguments across its borders with the sociology of scientific knowledge, social epistemology, and reflexive ethnography.

Neuromarketing in 7 answers - Stefano Calicchio 2020-05-30

This book was created to give simple, practical and effective answers to the main questions concerning neuro-marketing and its related

influences in the branch of neuroeconomics. The objective: to allow the reader a good understanding of the topic, using a text short enough to finish the reading taking advantage of the many moments of waiting and stalling of the day. Among the topics covered within it, it is possible to discover: - what neuromarketing is and how it is born; - how neuromarketing works and what levers it acts on; - what are the key elements of a neuromarketing campaign; - how to create a promotional message directed at the primitive brain; - how neuromarketing can be employed; - the basic rules of the discipline; - ethical and professional aspects of the use of neuromarketing. By reading the guide you can find the information you need to understand how neuromarketing works, what work is normally done by an expert in the field and what results can be achieved. All this is done through a 7-answer program designed to allow the reader to quickly acquire a good level of expertise on the subject, thus supporting effective conversations with suppliers and colleagues.

Biological Dosimetry - W. G. Eisert 2012-12-06

In October 1982, a small international symposium was held at the Gesellschaft fUr Strahlen- und Umweltforschung mbH (GSF) in Munich as a satellite meeting of the IX International Conference on Analytical Cytology. The symposium focussed on cytometric approaches to biological dosimetry, and was, to the best of our knowledge, the first meeting on this subject ever held. There was strong encouragement from the 75 attendees and from others to publish a proceedings of the symposium. Hence this book, containing 30 of the 36 presentations, has been assembled. Dosimetry, the accurate and systematic determination of doses, usually refers to grams of substance administered or rads of ionization or some such measure of exposure of a patient, a victim or an experimental system. The term also can be used to describe the quantity of an ultimate, active agent as delivered to the appropriate target material within a biological system. Thus, for mutagens, one can speak of DNA dosimetry, meaning the number of adducts produced in the DNA of target cells such as bone-marrow stem cells or spermatogonia.
