The Oxford Companion to Australian Sport - Wray Vamplew 1994

The Oxford Companion to Australian Sport appears in a revised, updated and greatly expanded new edition. Produced by the Australian Society

for Sports History, this is the first authoritative and encyclopedic reference work on all sports played in Australia. It provides a comprehensive overview of the history and character of the innumerable codes that constitute the Australian sporting character. All sports are covered - not just the major ones like cricket, Australian Rules, lawn tennis, and horse-racing. The Companion offers succinct and informative entries on famous sportsmen and women, and on major institutions, competitions and venues. The Companion also offers thematic essays on crucial aspects of the history, culture and professionalization of sport in Australia. For the first time readers have access to biographies of sporting champions from different codes, all of whom rub shoulders in this literary pantheon. For the second edition, the editors have commissioned four major new thematic essays: Coaching, Disabled Sportsmen and Women, Regionalism, and the Olympic Winter Games. Seven more sports have been added (badminton, bicycle racing, curling, fives, petanque, ring bowls, and surfing), along with 38 additional clubs. The second edition boasts 240 new biographies. One of its major features is a 'list of lists', which provides full details about major competitions such as the Stawell Gift, Davis Cup finals, the Sydney to Hobart Yacht Race, the Sheffield Shield, Brownlow Medallists - to name just a few of the lists contained in this Appendix. Greatly expanded and offering a readable cultural history of Australian sport, the Oxford Companion to Australian Sport is essential reading for sportsmen and women, administrators, journalists and sports followers.

Perfect Bowls - Hugh De Lacy 2007

Yes, there really is such a thing as the perfect bowl. And yes, everyone has the potential to bowl it. The perfect bowl is the one that defines and expresses the essence of Belliss' approach to the game - which is that what the mind truly believes, the body inevitably delivers. Perfect Bowls are the kind that Kiwi great Peter Belliss delivered so consistently they won him three world championship titles. And in Perfect Bowls Peter Belliss not only reveals the simple daily mind-training exercises that create unbeatable self-belief, but also brilliantly analyses the modern techniques and tactics that turn that self-belief into inevitable victory. Peter Belliss breaks the game of lawn bowls down into its bare mental and physical components - and then shows you how to put them all together to deliver your own Perfect Bowls.

Structure from Motion in the Geosciences - Jonathan L. Carrivick
2016-07-15

Structure from Motion with Multi View Stereo provides hyperscale landform models using images acquired from standard compact cameras and a network of ground control points. The technique is not limited in temporal frequency and can provide point cloud data comparable in density and accuracy to those generated by terrestrial and airborne laser scanning at a fraction of the cost. It therefore offers exciting opportunities to characterise surface topography in unprecedented detail and, with multi-temporal data, to detect elevation, position and volumetric changes that are symptomatic of earth surface processes. This book firstly places Structure from Motion in the context of other digital surveying methods and details the Structure from Motion workflow including available software packages and assessments of uncertainty and accuracy. It then critically reviews current usage of Structure from Motion in the geosciences, provides a synthesis of recent validation studies and looks to the future by highlighting opportunities arising from developments in allied disciplines. This book will appeal to academics, students and industry professionals because it balances technical knowledge of the Structure from Motion workflow with practical guidelines for image acquisition, image processing and data quality assessment and includes case studies that have been contributed by experts from around the world.

[The Quantum Hall Effect](#) - Benoît Douçot 2006-01-20

The Poincaré Seminar is held twice a year at the Institut Henri Poincaré in Paris. The goal of this seminar is to provide up-to-date information

about general topics of great interest in physics. Both the theoretical and experimental results are covered, with some historical background. Particular care is devoted to the pedagogical nature of the presentation. This volume is devoted to the quantum Hall effect. After a historical and general presentation by Nobel prize winner Klaus von Klitzing, discoverer of this effect, the volume proceeds with reviews on the mathematics and physics of both the integer and fractional case. It includes up to date presentations of the tunneling and metrology experiments related to the quantum Hall effect. It will serve the community of physicists and mathematicians at professional or graduate student level.

Advanced Oxidation Processes for Water and Wastewater Treatment - Simon Parsons 2004-03-01

The suitability of Advanced Oxidation Processes (AOPs) for pollutant degradation was recognised in the early 1970s and much research and development work has been undertaken to commercialise some of these processes. AOPs have shown great potential in treating pollutants at both low and high concentrations and have found applications as diverse as ground water treatment, municipal wastewater sludge destruction and VOCs control. Advanced Oxidation Processes for Water and Wastewater Treatment is an overview of the advanced oxidation processes currently used or proposed for the remediation of water, wastewater, odours and sludge. The book contains two opening chapters which present introductions to advanced oxidation processes and a background to UV photolysis, seven chapters focusing on individual advanced oxidation processes and, finally, three chapters concentrating on selected applications of advanced oxidation processes. Advanced Oxidation Processes for Water and Wastewater Treatment will be invaluable to readers interested in water and wastewater treatment processes, including professionals and suppliers, as well as students and academics studying in this area. Dr Simon Parsons is a Senior Lecturer in Water Sciences at Cranfield University with ten years' experience of industrial and academic research and development.
