*Take Charge of Your Nursing Career* - Lois Marshall 2021-10-15

The essential theme of the book is "career" as a fluid process. A career is not stagnant or simply a "job." A career is a process that needs to be nurtured, constantly grown, and managed. A career is an opportunity for nurses to find their voice and use it to promote both the individual and professional impact of their expertise. A career should be challenging, always giving way to more learning and mentoring opportunities. A career has the uniqueness of being a global concept. The intricacies of career development and management across the globe cannot be overlooked. A career journey ebbs and flows, one of the great characteristics of a professional nursing career. There are always options to consider on one's career path. There are always opportunities to gain experience and expertise in diverse areas, often never considered, by a professional nurse. The second edition of *Take Charge of Your Nursing Career* will provide a unique and distinct perspective on career development and management for a nurse's

complete career journey. The book covers timely and relevant topics, tips, strategies, and examples for professional nurses to use to develop and manage their careers from beginning to end. The topics discussed in the book are ones that professional nurses at all points on their career path are asking about and dealing with in their careers today and for their future. This "one stop shop" approach provides the professional nurse with a user-friendly book that can be referenced throughout their career, while also providing resources and applicable websites that they can access when they are needed as they create their personal career trajectory. Unique to this time, globally, as the Covid-19 pandemic, continues to impact our daily lives, career development and management has taken on even more importance to nursing professionals. New graduates are entering a nursing workforce where expectations are expanded and challenging. Many more experienced nurses have changed roles. Many nurses have seen their positions eliminated and are expected to change with the times, but without having the education or "skill set" and a "how to" approach to make those changes.

**Nursing and Nursing Education** - Institute of

Medicine 1983-02-01

Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally prepared for advanced professional positions in nursing is examined. The influence of employer policies and practices in utilization of nursing resources on demand and supply is also addressed. Finally, areas in which further data and studies are needed to better monitor nursing supply and demand are identified. In addition to 21 recommendations, appendices include information on Nursing Training Act appropriations, state reports on nursing issues, certificates for specialist registered nurses, projections of registered nurse supply and requirements, and doctoral programs in nursing. *Opportunities to Address Clinical Research Workforce Diversity Needs for 2010* - National Research Council 2006-06-21

Based on a 2003 workshop, this study describes current public and private programs and recommends ways to recruit and retain more women and underrepresented minorities into clinical research, especially physician-scientists and nurses. Federal sponsors should improve data collection, evaluate existing training programs, and increase the diversity of study section review panels. Public and private sponsors should create funding mechanisms with flexible career paths, and universities and professional societies should both play enhanced roles in fostering diversity. A significant push is needed to recruit minorities into nursing and provide more clinical research training for nurse-scientists, nursing students, and nursing faculty.

*Research Training in the Biomedical, Behavioral, and Clinical Research Sciences* - National Research Council 2011-03-28

Comprehensive research and a highly-trained workforce are essential for the improvement of health and health care both nationally and internationally. During the past 40 years the National Research Services Award (NRSA) Program has played a large role in training the workforce responsible for dramatic advances in the understanding of various diseases and new insights that have led to more effective and targeted therapies. In spite of this program, the difficulty obtaining jobs after the postdoc period has discouraged many domestic students from pursuing graduate postdoc training. In the United States, more than 50 percent of the postdoc workforce is made up of individuals who

obtained their Ph.D.s from other countries. Indeed, one can make a strong argument that the influx of highly trained and creative foreigners has contributed greatly to U.S. science over the past 70 years. Research Training in the Biomedical, Behavioral, and Clinical Research Sciences discusses a number of important issues, including: the job prospects for postdocs completing their training; questions about the continued supply of international postdocs in an increasingly competitive world; the need for equal, excellent training for all graduate students who receive NIH funding; and the need to increase the diversity of trainees. The book recommends improvements in minority recruiting, more rigorous and extensive training in the responsible conduct of research and ethics, increased emphasis on career development, more attention to outcomes, and the requirement for incorporating more quantitative thinking in the biomedical curriculum.

*The Future of Nursing* - Institute of Medicine  
2011-02-08

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.
